(Book). Of all American audio companies, JBL holds the record for overall longevity and product renown. To celebrate sixty years of success, this book offers details on the people and products that have made this company famous. From car stereos to concert hall installations, JBL is the most recognized audio brand in the world.

Written by audio expert John Eargle, this book features full-color photos, historical advertisements, and hundreds of diagrams and images, many taken right from JBL's archives. Topics include stories behind the development of innovative applications for consumer products, as well as systems installations for stadiums, tour sound, movie theaters, recording studios, and places of

worship. In addition to the technical info that will help explain the innovation, this book will cover the brilliant engineers, and colorful record producers, musicians and technicians who had the vision to pursue a "better way". This book is for anyone interested in the behind-the-scenes of a business success story, and who is fascinated on how amplified sound is applied in almost every aspect of our lives from the home to the concert hall.

The use of digital technologies have given rise to new forms of customer-firm interactions (e.g., the use of digital assistants in customer service). The shift towards digitization of customer-firm interactions enables a wide and easily scalable new set of offerings to consumers. From a consumer perspective, the increased use of digital technologies constantly shape individual decisions and attitudes towards firms. This dissertation examines the extent to which customers benefit from these technological advances by taking on a behavioral economics perspective. The main focus of the dissertation lies on two aspects which are

highly relevant for firms: (i) customer satisfaction, and (ii) the quality of customers' economic decisions. The dissertation employs a wide set of methods (theoretical modelling, analysis of experimental data, analysis of observational data) and consists of three articles. Article 1 is conceptual in nature and lays the theoretical foundation by providing theoretical insights on customer-related decision processes from a behavioral economics perspective. Article 2 looks at how the availability and presentation of information influences customer satisfaction. The focus of Article 3 lies on technology's impact on economic decision making with a particular interest on automated investment advice from a robo-advisor, and the role of social design elements.
