This book explores the history and politics of motor racing, one of the most popular and lucrative elements in the international sport industry. Written by a group of international scholars and motor racing specialists it discusses the sport's origins, the relationship of motor racing to nation building and modernity (noting its links to fascism and dictatorship), the links between motor racing and the automobile industry, motor racing and the politics both of gender and of race, motor racing, the media and postmodernity, and motor racing, the spatial and globalization. This book speaks to scholars in history, politics, sport studies, the sociology of sport, sport management and cultural studies, along with the many lay readers who are interested in the relationship between motor sport and society.

The engineering ideas behind key twentieth-century technical innovations, from great dams and highways to the jet engine, the transistor, the microchip, and the computer. Technology is essential to modern life, yet few of us are technology-literate

enough to know much about the engineering that underpins it. In this book, David P. Billington, Jr., offers accessible accounts of the key twentieth-century engineering innovations that brought us into the twenty-first century. Billington examines a series of engineering advances--from Hoover Dam and jet engines to the transistor, the microchip, the computer, and the internet--and explains how they came about and how they work.
