The research areas as well as the knowledge gained for the practical use of robots are growing and expanding beyond manufacturing and industrial automation, making inroads in sectors such as health care and terrain sensing, as well as general assistive systems working in close interaction with humans. In a situation like this, it is necessary for future robot systems to become less stiff and more specialized by taking inspiration from the mechanical compliance and versatility found in natural materials and organisms. At present, a new discipline is emerging in this area, called »Soft Robotics«. It particularly challenges the traditional thinking of engineers, as the confluence of technologies, ranging from new materials, sensors, actuators and production techniques to new design tools, will make it possible to create new systems whose structures are almost completely made of soft materials, which bring about entirely new functions and behaviors, similar in many ways to natural systems. These Proceedings focus on four main topics: • Soft Actuators and Control • Soft Interactions • Soft Robot Assistants: Potential and Challenges • Human-centered »Soft Robotics«.

In this classic collection, some of the world's most eminent critics of development review the key concepts of the development discourse. Each essay examines one concept from a historical and anthropological point of view, highlights its particular bias, and exposes its historical obsolescence and intellectual sterility. The authors argue that a bidding farewell to the whole Eurocentric development idea is urgently needed, in order to liberate people's minds in both North and South for bold responses to the environmental and ethical challenges now confronting humanity. The combined result forms a must-read invitation to experts, grassroots movements and students of development to recognize the tainted glasses they put on whenever they participate in the development discourse.

J.C.B. Petropoulos examines the description of midsummer in Hesiod's Works and Days, explores modern Greek agrarian practices and relevant folk beliefs, proverbs, symbols, and songs, and cautiously attempts a "backward extrapolation". With the help of comparative ethnographic models, readers will not only better appreciate the seasonal settings of Hesiod's harvest and its midsummer aftermath, but also will obtain a provocative sidelight into the local song traditions and general lore that underlie the famous passage and Alcaeus's poem.

Philomena Sequeira knows what she wants by the time she turns fourteen. Her father wants something else. Her neighbours deal with adultery, abandonment and abuse, by hoping for a place in heaven. Life is unyielding for the tenants of the rundown Obrigado Mansion in Orlem, a Roman Catholic parish in suburban Bombay. They grapple with love, loss and sin, surrounded by abused wives and repressed widows, alcoholic husbands and dubious evangelists, angry teenagers and ambivalent priests, all struggling to make sense of circumstances they have no control over. Gods and Ends takes up multiple threads of individual stories to create a larger picture of darkness beneath a seemingly placid surface. It is about intersecting lives struggling to accept change as homes turn into prisons. This is a book about invisible people in a city of millions, and the claustrophobia they rarely manage to escape from.
