Fundamentals of Chemical Engineering
Thermodynamics Grosvenor House Publishing
The Clear, Well-Organized Introduction to Thermodynamics Theory and Calculations for All Chemical Engineering Undergraduate Students This text is designed to make thermodynamics far easier for undergraduate chemical engineering students to learn, and to help them perform thermodynamic calculations with confidence. Drawing on his award-winning courses at Penn State, Dr. Themis Matsoukas focuses on "why" as well as "how." Handbook of Dissolution Testing Frog Books
A mention of flatulence might conjure up images of bratty high school boys or lowbrow comics. But one of the most eloquent—and least expected—commentators on the subject is Benjamin Franklin. The writings in *Fart Proudly* reveal the rogue who lived peaceably within the philosopher and statesman. Included are "The Letter to a Royal Academy"; "On Choosing a Mistress"; "Rules on Making Oneself Disagreeable"; and other jibes. Franklin's irrepressible wit found an outlet in perpetrating hoaxes, attacking marriage and other sacred cows, and skewering the English Parliament. Reminding us of the humorous, irreverent side of this American icon, these essays endure as both hilarious satire and a timely reminder of the importance of a free press.

The Anthropocene has emerged as perhaps the scientific concept of the new millennium. Going further than earlier conceptions of the human – environment relationship, Anthropocene science proposes that human

activity is tipping the whole Earth system into a new state, with unpredictable consequences. Social life has become a central ingredient in the dynamics of the planet itself. How should the social sciences respond to the opportunities and challenges posed by this development? In this innovative book, Clark and Szerszynski argue that social thinkers need to revise their own presuppositions about the social: to understand it as the product of a dynamic planet, self-organizing over deep time. They outline 'planetary social thought': a transdisciplinary way of thinking social life with and through the Earth. Using a range of case studies, they show how familiar social processes can be radically recast when looked at through a planetary lens, revealing how the world-transforming powers of human social life have always depended on the forging of relations with the inhuman potentialities of our home planet. Presenting a social theory of the planetary, this book will be essential reading for students and scholars interested in humanity 's relation to the changing Earth.
