Textbook of Pharmacognosy and Phytochemistry This comprehensive textbook is primarily aimed at the course requirements of the B. Pharm. students. This book is specially designed to impart knowledge alternative systems of medicine as well as modern pharmacognosy. It would also serve as a valuable resource of information to other allied botanical and alternative healthcare science students as well as researchers and industrialists working in the field of herbal technology. Only Textbook Offering... Recent data on trade of Indian medicinal plants (till 2008) Illustrated biosynthetic pathways of metabolites as well as extraction and isolation methodologies of medicinal

compounds Bioactivity determination and synthesis of herbal products of human interest Information on Ayurvedic plants and Chinese system of medicine Simple narrative text that will help the students quickly understand important concepts Over 300 illustrations and 120 tables in order to help students memorize and recall vital concepts making this book a student's companion cum teacher A must buy for every student of pharmacognosy!

Marine Cosmeceuticals: Trends and Prospects is a consolidated overview of the marine environment as a productive source of novel cosmeceuticals. It accumulates the latest research in this field from around the globe, highlighting the potential of marine micro and macro flora and fauna as effective agents for the development of novel cosmeceuticals. Urinalysis & Body Fluids Springer Science & Business Media

This comprehensive volume reviews current topics and controversies in diagnostic breast pathology, and addresses frequently encountered diagnostic problems using a question and answer format and case presentations. Emphasis is placed on the diagnostic approach as it relates to morphology, clinical and radiographic correlation, differential

diagnosis, and ancillary testing including immunohistochemical and molecular analyses. Answers are provided and serve as a practical, evidence-based, and problem solving guide to diagnostic issues having significant impacts on clinical management. Common but diagnostically challenging entities such as papillary lesions and fibroepithelial lesions are discussed in detail, as well as special types of breast cancer including solid papillary carcinoma, lobular lesions and its variants. Uncommon breast lesions such as mesenchymal, lymphoid, and metastatic lesions are also covered. Chapters discuss genetic alterations and molecular abnormalities in breast cancer, and commonly encountered interpretation dilemmas on immunohistochemistry in breast cancer and metastatic cancer to the breast with a focus on prognostic and predictive tumor biomarkers.

The Law of International Watercourses examines the rules of international law governing the non-navigational uses of international watercourses. The continued growth of the world's population places increasing demands on Earth's finite supply of fresh water. Because two or more states share many of the world's most important drainage basins - including The Danube, The Ganges, The Indus, The Jordan, The Mekong, The Nile, The Rhine, and The Tigris-Euphrates - competition for increasingly scarce fresh water resources is likely to increase. Resulting disputes will be resolved against the backdrop of the rules of international law governing the use of international watercourses. In addition, these rules are of importance to donor institutions and governments that provide development assistance for projects relating to shared fresh water resources. While the law of international watercourses continues to evolve due to the intensification of use of shared fresh water resources and, consequently, increasingly frequent contacts between riparian states, The basic rules are reflected in the 1997 UN Convention on the law of the non-navigational uses of international watercourses. This book devotes a chapter to the 1997 Convention but also examines the factual and legal context in which the Convention should be understood, considers the more important rules of the Convention in some depth and discusses specific

issues that could not be addressed in a framework instrument of that kind. In particular, the book studies the major cases and controversies concerning international watercourses as a background against which to consider the basic substantive and procedural rights and obligations of states.

This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

Due to increasing global food needs as a result of population growth, the use of new food sources has gained interest in the last decade. However, the inclusion of new foods in our diet, as well as the increased interest of the population in consuming foods with better nutritional properties, has increased the need for adequate food analytical methods. This monographic issue presents innovative methods of chemical analysis of foods, as well as the nutritional and chemical characterization of foods whose consumption is expected to increase worldwide in the coming years.

PRINCIPLES OF MANAGEMENT, 12E, International Edition takes a practical, student-oriented approach toward teaching management with an emphasis on current topics, including issues of diversity, ethics, and technology. The student-friendly content features references to pop culture and cites current publications of interest to students. In addition to providing the management framework and introducing students to contemporary management topics, the text provides experiential activities to get students thinking and acting like real-life managers. A robust network of supplements helps students to understand the hands-on, real-world application of chapter concepts.

This volume provides a variety of protocols to analyze various epigenetic changes, including differential expression of non-coding RNAs, changes in DNA methylation, and histone modifications in plants. Chapters detail protocols with different degrees of complexity, and describe bioinformatics approaches for data processing and analysis. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative

and cutting-edge, *Plant Epigenetics: Methods and Protocols, Second Edition* aims to ensure successful results in the further study of this vital field.

Laboratory Manual in General Microbiology Methods in Molecular Biology

This comprehensive volume covers all the subspecialties of laryngology, from phonosurgery to cancer. Each surgical procedure is explained and well illustrated in a step-by-step manner. In addition, coverage evaluates different surgical methods such as endoscopic versus open surgery and the use of cold instrument versus laser so that the reader receives guidance for the use of these complimentary methods.

This lab manual teaches how microbiological principles should be applied in practice. The labs are specifically designed for allied health and nursing microbiology courses, offering students a foundation in the practical lab skills and knowledge they need to be successful in this profession. Coverage of disease-causing microorganisms is organized by organism first and then subsequently by the body system affected. Critical-thinking questions challenge students to apply chapter material. Case studies are presented at the end of each disease chapter. These questions and case studies help students develop critical thinking skills and also serve to generate class discussions.

Epithelial phenotype is a dynamic stage of differentiation that can be modulated during several physiological or pathological events. The rapid conversion to a mesenchymal-like phenotype is called an epithelial-mesenchymal transition (EMT). The

Rise and Fall of Epithelial Phenotype is the first book to comprehensively introduce the concept of EMT.

The first part of this volume describes main examples and models and explains their physiological relevance.

These examples include hydra morphogenesis, gastrulation in mouse, drosophila and sea urchin, as well as neural crest cell migration and heart

morphogenesis in vertebrates. Part two reviews in detail, specific EMT molecular pathways covering extracellular induction, transduction and transcription response and modulation of cell-cell adhesion

structures. It emphasizes new specific pathways with potential medical applications. EMTs can also be

linked to pathological events such as wound healing and cancer progression, as detailed in this section of the book.

This book is based on a graduate course entitled, Ubiquitous Healthcare Circuits and Systems, that was given by one of the editors at his university. It includes an introduction and overview to the field of biomedical ICs and provides information on the current trends in research. The material focuses on the design of biomedical ICs rather than focusing on how to use prepared ICs.

Muscle tears are one of the most common pathologies in sport and one of the most frequent causes of sport activity suspension. The purpose of this book is to review the state of the art of the actual knowledge on muscle tears in athletes, in particular for what concern the biology of muscle healing, the conservative and surgical treatments and the preventive aspects. Therefore, this textbook can be a valid tool for all Sport Medicine practitioners such as physicians, physiotherapists and fitness coaches.

With increasing energy prices and the drive to reduce CO2 emissions, food industries are challenged to find new technologies in order to reduce energy consumption, to meet legal requirements on emissions, product/process safety and control, and for cost reduction and increased quality as well as functionality. Extraction is one of the

promising innovation themes that could contribute to sustainable growth in the chemical and food industries. For example, existing extraction technologies have considerable technological and scientific bottlenecks to overcome, such as often requiring up to 50% of investments in a new plant and more than 70% of total process energy used in food, fine chemicals and pharmaceutical industries. These shortcomings have led to the consideration of the use of new "green" techniques in extraction, which typically use less solvent and energy, such as microwave extraction. Extraction under extreme or non-classical conditions is currently a dynamically developing area in applied research and industry. Using microwaves, extraction and distillation can now be completed in minutes instead of hours with high reproducibility, reducing the consumption of solvent, simplifying manipulation and work-up, giving higher purity of the final product, eliminating post-treatment of waste water and consuming only a fraction of the energy normally needed for a conventional extraction method. Several classes of compounds such as essential oils, aromas, anti-oxidants, pigments, colours, fats and oils, carbohydrates, and other bioactive compounds have been extracted efficiently from a variety of matrices (mainly animal tissues, food, and plant materials). The advantages of using microwave energy, which is a non-contact heat source, includes more effective heating, faster energy transfer, reduced thermal gradients, selective heating, reduced equipment size, faster response to process heating control, faster start-up, increased production, and

elimination of process steps. This book will present a complete picture of the current knowledge on microwave-assisted extraction (MAE) of bioactive compounds from food and natural products. It will provide the necessary theoretical background and details about extraction by microwaves, including information on the technique, the mechanism, protocols, industrial applications, safety precautions, and environmental impacts.

Several species of *Dinophysis* produce one or two groups of lipophilic toxins: okadaic acid (OA) and its derivatives; or the dinophysistoxins (DTXs) (also known as diarrhetic shellfish poisons or DSP toxins) and pectenotoxins (PTXs). DSP toxins are potent inhibitors of protein phosphatases, causing gastrointestinal intoxication in consumers of contaminated seafood. Forty years after the identification of *Dinophysis* as the causative agent of DSP in Japan, contamination of filter feeding shellfish exposed to *Dinophysis* blooms is recognized as a problem worldwide. DSP events affect public health and cause considerable losses to the shellfish industry. Costly monitoring programs are implemented in regions with relevant shellfish production to prevent these socioeconomic impacts. Harvest closures are enforced whenever toxin levels exceed regulatory limits (RLs). *Dinophysis* species are kleptoplastidic dinoflagellates; they feed on

ciliates (*Mesodinium* genus) that have previously acquired plastids from cryptophycean (genera *Teleaulax*, *Plagioselmis*, and *Geminigera*) nanoflagellates. The interactions of *Dinophysis* with different prey regulate their growth and toxin production. When *Dinophysis* cells are ingested by shellfish, their toxins are partially biotransformed and bioaccumulated, rendering the shellfish unsuitable for human consumption. DSP toxins may also affect shellfish metabolism. This book covers diverse aspects of the abovementioned topics—from the laboratory culture of *Dinophysis* and the kinetics of uptake, transformation, and depuration of DSP toxins in shellfish to *Dinophysis* population dynamics, the monitoring and regulation of DSP toxins, and their impact on the shellfish industry in some of the aquaculture regions that are traditionally most affected, namely, northeastern Japan, western Europe, southern Chile, and New Zealand.
