Deanovich's second volume of poetry. "Zombie Jet is divided in three parts. "This is the Universe," takes on big questions-time, space, countries of the world. "Silver Dress and Ukelele," reveals her personal aesthetic-part fabulous pomp, part thrift store puffery-her Chicago

home, and her personal relationships. "King Kong Watches Over Me," is pure fun: movies, monsters, and the idea of culture.

Written by a knowledgeable film critic and Korean War scholar, this is the only guide exclusively devoted to the study of Hollywood and television films on the Korean War. It opens with eight short essays on the war film genre and the Korean War film. Eighty-four films are then discussed in an alphabetical listing. Entries include the

production unit, color status, producer, director, screenwriter, actors and actresses, movie length, and the author's numerical rating of the film. The commentary places each film within the context of other war films, the Korean War, the trends in Hollywood, and the social and political realities of the United States.

This book outlines the critical engineering discoveries leading

to the jet transport age - from observations of birds in flight to modern jet transports. Starting with the Wright Brothers, it traces a path to the Boeing XB-47 swept-wing jet bomber, ending with the first generation of commercial jet transports: the Comet, the Convair 990, the DC-8, and

the 707. Chapters include: The Pioneers; Airmail and the Early Transports; The 247 Airliners; The DC-3 and the Four-Engine Transports; The Four-Engine Bombers; The War Years; The Turbo-Jet Engine; The GE TG-180 Jet Engine; The Boeing High-Speed Wind Tunnel; The Swept Wing; The Jet Bomber; The Dash-80 Prototype;

The 707-DC-8 Competition; and The Fan Engine. A clearly-written and easy-to-read book that is a must-read for all aircraft enthusiasts. William H. Cook started working for Boeing Engineering in 1938. There he held many prominent positions, including Manager of High-speed Wind Tunnel Design; B-29 Assistant Project

Engineer; XB-47
Aerodynamics Unit
Chief; and Chief of

The New York Times Manual of Style and Usage, 5th Edition CRC Press
This text provides a self-contained introduction to the aerodynamic and thermodynamic design of modern civil and military jet engines. Through two engine design projects, first for a new large passenger aircraft,

and second for a new fighter aircraft, the text introduces, illustrates and explains the important facets of modern engine design. Individual sections cover aircraft requirements and aerodynamics, principles of gas turbines and jet engines, elementary compressible fluid mechanics, bypass ratio selection, scaling and dimensional analysis, turbine and compressor design and characteristics, design optimization, as well

as off-design performance. Although the book assumes familiarity with basic fluid mechanical ideas, background is given where necessary. The book emphasises principles and ideas, with simplification and approximation used where this helps understanding. Many exercises (using numerical rather than algebraic solutions, with realistic empirical input where needed) support and reinforce the text. A detailed glossary is

included. This text is suitable for student courses in aircraft propulsion and jet engine design, but will be invaluable as a guide and reference for engineers in the engine and airframe industry. Japan's Subnational Governments in International Affairs Psychology Press

Route entry and exit flexibility, as well as fare setting have stimulated competition, forcing airlines to emphasize cost control,

increased productivity, characterized by and effective marketing. How have these changes in both public and private policies influenced airline safety? Do airplanes have more accidents now than ever before? This work examines the causes of airplane accidents and what private and public policies are needed to improve aviation safety. It begins by examining the safety record of the United States commuter airline industry in the post-deregulation era

increased emphasis by airlines on cost control and growing pressures on the air traffic control and airport system. The authors go beyond the safety of the scheduled airlines to examine the reasons for accidents in the nonscheduled and general aviation segments of the United States industry, where the bulk of fatalities occur and where airline pilots increasingly receive most of their training and experience. They then

turn to an examination of aviation safety throughout the world, first with a detailed comparison of Canadian and American aviation safety, and then with a look at air safety in all regions of the world and the safety performances of all the world's major airlines. Three emerging issues are then examined in greater detail: assessing the margin of safety, worldwide aging of all airline fleets, and terrorism. Clearly written, this careful and systematic analysis

of well over 15,000 individual aviation accidents will provide greater insight for government officials, aviation industry managers, and researchers, as well as laypeople and other frequent flyers.

During the desperate closing stages of the Second World War, the Germans brought into action several new aircraft types - the jet-propelled Messerschmitt Me262 Sturmvogel and Arado Ar234 Blitz and the rocket-powered Messerschmitt Me 163 Komet. The British introduced the jet-powered Gloster Meteor and the Japanese the Yokosuka Ohka. This book tells the full story of the

development and operational careers of these aircraft. It also tells the stories of the two American and one German jet aircraft that had entered squadron service and were on the point of going into action when the war ended: the Lockheed P-80A Shooting Star, the Ryan FR 1 Fireball and the Bachem 349 Natter.
