different, claiming a Games would deliver a legacy of new sporting facilities, thousands of new jobs, new businesses, a step-change in the nation's physical activity and ultimately a transformation of the East End of London. But an analysis of past Games reveals that there is no automatic Olympic dividend, with the benefits often failing to flow to the people and places most in need. What is clear is that those cities that have secured a more sustainable legacy, have embedded the Olympics within a broader urban strategy. The challenge for London is to integrate the preparation for and hosting of the Games into a broader social policy agenda from the outset. The contributors to this report analyse the challenges facing the organisers and offer a practical vision for a London Games which brings a sustainable legacy for employment, sport, culture, the environment and local communities.

Circles in the Sky National Council of Teachers of Mathematics

This book is written for parents and other interested parties so that they can understand the great debate taking place in many states in this country about how to teach basic math. The

debate centers around the standards written by the National Council of Teachers of Mathematics (NCTM), which call for a radically different approach to mathematics education. Because the issues are so heated between the NCTM-oriented curricula and traditional curricula (the curricula that NCTM-oriented replaced), the term Math Wars was coined to describe them. Parents are concerned about their children's math learning. Teachers are concerned about math teaching. When parents see what children are bringing home under the new curriculum, it is clear that their children are not working on the same mathematics that parents remember from the time when they were in school. But, the problem goes beyond grades K-12. Post-secondary mathematics courses are the fear of many students. The standards created by the NCTM do not necessarily prepare students for success, either on SATs or in college. Besides lack of knowledge about mathematics education, many parents have an additional problem in that they feel they lack knowledge in mathematics itself. This is very intimidating; thus it is difficult for parents to do anything about the confusing state of mathematics education. This book provides some answers.

Life on the Mississippi (1883) is a memoir by Mark Twain of his days as a steamboat pilot on the Mississippi River before the American Civil War. It is also a travel book, recounting his

trip along the Mississippi River from St. Louis to New Orleans many years after the war. The book begins with a brief history of the river as reported by Europeans and Americans, beginning with the Spanish explorer Hernando de Soto in 1542. It continues with anecdotes of Twain's training as a steamboat pilot, as the 'cub' (apprentice) of an experienced pilot, Horace E. Bixby. He describes, with great affection, the science of navigating the ever-changing Mississippi River in a section that was first published in 1876, entitled "Old Times on the Mississippi". Although Twain was actually 21 when he began his training, he uses artistic license to make himself seem somewhat younger, referring to himself as a "fledgling" and a "boy" who "ran away from home" to seek his fortune on the river, and playing up his own callowness and naïveté.

The Song of Everlasting Sorrow follows the adventures of Wang Qiyao, a girl born of the crowded, labyrinthine alleys of Shanghai's working-class neighborhoods. Infatuated with the glitz and glamour of 1940s Hollywood, Wang Qiyao seeks fame in the Miss Shanghai beauty pageant, and this fleeting moment of stardom becomes the pinnacle of her life. After the Communist victory, Wang Qiyao continues to indulge in the decadent pleasures of the Shanghai bourgeoisie, secretly playing mahjong during the antirightist campaign and exchanging lovers on the eve of the Cultural Revolution. She reemerges in the 1980s as a purveyor of "old Shanghai," only to become embroiled in a tragedy that echoes the Hollywood noirs of her youth.

In the summer of 1893, at the Columbian Exposition in Chicago, an engineering marvel was unveiled and immediately captured the world's attention. It was a towering, web-like giant wheel, standing upright and rotating high above the city. Several stories taller than any existing American building, the Ferris Wheel carried adventure-seeking passengers to the dizzying height of 264 feet and provided panoramic views never before possible. George W. G. Ferris Jr. and his wheel helped usher America eager to identify itself with ingenuity, entrepreneurialism, and innovation into the 20th century. Yet the very wheel that came to define George Ferris in the end consumed him, leaving him ruined. This book is the first full-length biography of George Ferris. He was a civil engineer, an inventor, and a pioneer for his development of structural steel in bridge building. *Circles in the Sky* chronicles the life of the man responsible for creating, designing, and building the Ferris Wheel, the only structure of its time to rival the Eiffel Tower. It is, at the same time, the story of the Ferris clan, one of the nation's oldest and most fascinating families. The London Eye, erected in 1999 to welcome the new millennium,

the Star of Nanchang, and most recently, the Singapore Flyer, have revived our love affair with Ferris wheels. Circles in the Sky will enchant anyone interested in engineering marvels, history, and the Ferris wheel, which reminds us that America was built by dreamers and innovators such as George W. G. Ferris Jr. About the Author Richard G. Weingardt, P.E., Dist.M.ASCE, is a practicing structural engineer with nearly 50 years of experience. He is also a sought-after motivational speaker and an accomplished author of books and articles, including Engineering Legends: Great American Civil Engineers (ASCE Press, 2005) and regular columns in Structural Engineer and ASCE's Journal of Leadership and Management in Engineering.

notables, of being torpedoed off North Africa while reporting World War II, of flying combat missions, of photographing the dread murder camps of Nazi Germany, of touring Tobacco Road to produce the book You Have Seen Their Faces with Erskine Caldwell (whom she later married), of adventures—and wonderful picture-taking—in the mines of South Africa, in the frozen North, in war-torn Korea. Illustrated throughout with over 70 of Margaret Bourke-White's fine photographs, this is the great life story of a great American, greatly yet modestly told.

RUNKLE FAMILY

This is the story of the internationally acclaimed American woman Margaret Bourke-White, who for over thirty years made photographic history: as the first photographer to see the artistic and storytelling possibilities in American industry, as the first to write social criticism with a lens, and as the most distinguished and venturesome foreign correspondent-with-a-camera to report wars, politics and social and political revolution on three continents. In this poignant autobiography, Bourke-White details her fight against Parkinson's disease, and recounts tales of her struggles to master her art and craft, of photographing Stalin, Gandhi and many other
