economics - Investment and Finance, University of Kassel (Research Group Entrepreneurship), language: English, abstract: Independent Venture Capital (IVC) has been paramount in the emergence of the information technology industry in both the United States and Europe. There are relatively few large global information technology companies in Europe. A widening gap is observable in the success rate of IVC

backed start-ups between the U.S. and Europe in the information technology industry. This difference could be attributable to the differences in the venture capital financing of start-ups in the U.S., UK, Germany and France. This book deals with "Differences in Venture Capital Financing of U.S., UK, German and French Information Technology Start-ups". The comparative analysis is conducted on a microeconomic level (managerial

venture capital research), i.e. on the venture capital firm level. The differences are analyzed for the whole venture capital investment cycle: contact phase, initial screening phase, due diligence phase, deal structuring and negotiation phase, management phase — value adding services, and exit phase. The research framework model examines the following differences in the venture capital investment cycle: average size of investment in the

seed stage, average size of investment in the start-up stage, average size of investment in the growth stage, percentage of start-ups in pre-revenue phase at time of investment, percentage of start-ups not managed by founders but experienced managers, percentage of investment in start-ups with me-too products, percentage of market analysis due diligence done informal, typical liquidation preference multiple, percentage syndicated exits that are outperformers, number of tranches per investment round, number of board seats per partner and the cash multiple X that defines an outperformer. The empirical research work is based on an extensive scientific online questionnaire with VCs in the U.S., UK, Germany and France. Before the online questionnaire was drafted, a preliminary face-to-face expert interview was conducted with 24 VCs in Silicon Valley, London, Paris, Hamburg, Berlin and Munich. The primary data collected in the questionnaire served as basis for quantitative parametric and non-parametric statistical analysis. The book is bespokenly written for decision makers in the venture capital industry in the U.S, UK, Germany and France; all entrepreneurs and professionals who want to understand the economics and mechanics of venture capital term sheet clauses; venture capital industry professionals; VC

Authors: Ann Allott Daniel M. Kowalski Edward F. "Ned" Frazier Since the 1980s, employers

have been required to verify that new employees are entitled to work in the United States. Enforcement of the verification laws had been lax, however, until a trend in recent years that began to show large increases in "immigration raids" and other government enforcement activity to remove unauthorized noncitizens from U.S. workplaces. Verification enforcement exposes employers to serious criminal charges and heavy fines and penalties. At the same time, however, the statutes also impose liability on employers for discriminating on the basis of national origin or citizenship status. As with documentation violations,

discrimination charges similarly can lead to fines, penalties, large awards of damages, litigation expense, unfavorable publicity, and other harmful effects on a business. It can be very difficult to avoid liability for documentation violations while at the same time avoiding liability under the discrimination provisions. Immigration Enforcement: I-9 Compliance Handbook offers guidance from Ann Allott, an attorney who has spent years practicing, writing, and speaking on just this problem. She offers easily understood, step-by-step procedures, sample forms and notices, and reference materials to point employers through

this difficult area of immigration and employment law. Additional material is contributed by Daniel Kowalski, editor-in-chief of Bender's Immigration Bulletin, and by Edward F. Frazier, a long-time HR expert. Career Contentment Crown

The global shift toward delivering services online requires organizations to evolve from using traditional paper files and storage to more modern electronic methods. There has however been very little information on just how to navigate this change-until now. Implementing Electronic Document and Record Management Systems explains how to efficiently store and access electronic documents and records in a manner that allows quick and efficient access to information so an organization may meet the needs of its clients. The book addresses a host of issues related to

electronic document and records management systems (EDRMS). From starting the project to systems administration, it details every aspect in relation to implementation and management processes. The text also explains managing cultural changes and business process re-engineering that organizations undergo as they switch from paper-based records to electronic documents. It offers case studies that examine how various organizations across the globe have implemented EDRMS. While the task of creating and employing an EDRMS may seem daunting at best, Implementing Electronic Document

and Record Management Systems is the resource that can provide you with the direction and guidance you need to make the transition as seamless as possible. The National Broadband Plan Notion Press This introductory textbook presents a variety of approaches and perspectives that can be employed to analyze any sample of discourse. The perspectives come from multiple disciplines, including linguistics, sociolinguistics, and linguistic anthropology, all of which shed light on meaning and the interactional construction of meaning through language use. Students without prior experience in

discourse analysis will appreciate and understand the micro-macro relationship of language use in everyday contexts, in professional and academic settings, in languages other than English, and in a wide variety of media outlets. Each chapter is supported by examples of spoken and written discourse from various types of data sources, including conversations, commercials, university lectures, textbooks, print ads, and blogs, and concludes with hands-on opportunities for readers to actually do discourse analysis on their own. Students can also utilize the book's comprehensive companion website, with flash cards for

key terms, quizzes, and additional data samples, for in-class activities and self-study. With its accessible multi-disciplinary approach and comprehensive data samples from a variety of sources, Discourse Analysis is the ideal core text for the discourse analysis course in applied linguistics, English, education, and communication programs.

The objective of the workshops associated with ER 2001, the 20th International Conference on Conceptual Modeling, was to give participants

the opportunity to present and discuss emerging hot topics, thus adding new perspectives to conceptual modeling. This, the 20th ER conference, the first of the 21st century, was also the first one in Japan. The conference was held on November 27-30, 2001 at Yokohama National University with 192 participants from 31 countries. ER 2001 encompasses the entire spectrum of conceptual modeling, from theoretical aspects to

implementations, including fundamentals, applications, and software engineering. In particular, ER 2001 emphasized e-business and reengineering. To meet this objective, we selected the following four topics and planned four international workshops: – International Workshop on Conceptual Modeling of Human/Organizational/Social Aspects of Manufacturing Activities (HUMACS 2001) Manufacturing enterprises have to confront a host of

demands. The competitive climate, enhanced by communication and knowledge sharing, will require increasingly rapid responses to market forces. Customer demands for higher quality, better services, and lower cost will force manufacturers to reach new levels of flexibility and adaptability. Sophisticated customers will demand products customized to meet their needs. Industries have so far sought to cope with these challenges

primarily through advances in traditional capital by installing more powerful hardware and software technology. Attention to the role of humans combined with organizational and social schemes in manufacturing has only been marginal. The workshop HUMACS 2001 aimed to challenge the relevance of this last point.
