The global shift toward delivering services online requires organizations to evolve from using traditional paper files and storage to more modern electronic methods. There has however been very little information on just how to navigate this change-until now. Implementing Electronic Document and Record Management Systems explains how to efficiently store and access electronic documents and records in a manner that allows quick and efficient access to information so an organization may meet the needs of its clients. The book addresses a host of issues related to electronic document and records management systems (EDRMS). From starting the project to systems administration, it details every aspect in relation to implementation and management processes. The text also explains managing cultural changes and business process re-engineering that organizations undergo as they switch from paper-based records to electronic documents. It offers case studies that examine how various organizations across the globe have implemented EDRMS. While the task of creating and

employing an EDRMS may seem daunting at best, Implementing Electronic Document and Record Management Systems is the resource that can provide you with the direction and guidance you need to make the transition as seamless as possible.

Broadband is the great infrastructure challenge of the early 21st century. Broadband is a foundation for economic growth, job creation, global competitiveness and a better way of life. The number of Americans who have broadband at home has grown from 8 million in 2000 to nearly 200 million last year. But, 100 million Americans do not have broadband at home. In early 2009, Congress directed the FCC to develop a National Broadband Plan to ensure that every American has access to broadband capability. This plan must also include a strategy for achieving affordability and

Doctoral Thesis / Dissertation from the year 2011 in the subject Business economics - Investment and Finance, University of Kassel (Research Group Entrepreneurship), language: English, abstract: Independent Venture Capital (IVC) has been paramount in the emergence of the information technology industry in both the United States and Europe. There are relatively few large global information technology companies in Europe. A widening gap is observable in the success rate of IVC backed start-ups between the U.S. and Europe in the information technology industry. This difference could be attributable to the differences in the venture capital financing of start-ups in the U.S., UK, Germany and France. This book deals with "Differences in Venture Capital Financing of U.S., UK, German and French Information Technology Start-ups". The comparative analysis is conducted on a microeconomic level (managerial venture capital research), i.e. on the venture capital firm level. The differences are analyzed for the whole venture capital investment cycle: contact phase, initial screening

phase, due diligence phase, deal structuring and negotiation phase, management phase — value adding services, and exit phase. The research framework model examines the following differences in the venture capital investment cycle: average size of investment in the seed stage, average size of investment in the start-up stage, average size of investment in the growth stage, percentage of start-ups in pre-revenue phase at time of investment, percentage of start-ups not managed by founders but experienced managers, percentage of investment in start-ups with me-too products, percentage of market analysis due diligence done informal, typical liquidation preference multiple, percentage syndicated exits that are outperformers, number of tranches per investment round, number of board seats per partner and the cash multiple X that defines an outperformer. The empirical research work is based on an extensive scientific online questionnaire with VCs in the U.S., UK, Germany and France. Before the online questionnaire was drafted, a preliminary face-to-face expert

interview was conducted with 24 VCs in Silicon Valley, London, Paris, Hamburg, Berlin and Munich. The primary data collected in the questionnaire served as basis for quantitative parametric and non-parametric statistical analysis. The book is bespokenly written for decision makers in the venture capital industry in the U.S, UK, Germany and France; all entrepreneurs and professionals who want to understand the economics and mechanics of venture capital term sheet clauses; venture capital industry professionals; VC associations  
The Muse Playbook for Navigating the Modern Workplace Penguin  
Authors: Ann Allott Daniel M. Kowalski Edward F. "Ned" Frazier Since the 1980s, employers have been required to verify that new employees are entitled to work in the United States. Enforcement of the verification laws had been lax, however, until a trend in recent years that began to show large increases in "immigration raids" and other government enforcement activity to remove unauthorized noncitizens from U.S. workplaces. Verification enforcement exposes employers to serious criminal charges

and heavy fines and penalties. At the same time, however, the statutes also impose liability on employers for discriminating on the basis of national origin or citizenship status. As with documentation violations, discrimination charges similarly can lead to fines, penalties, large awards of damages, litigation expense, unfavorable publicity, and other harmful effects on a business. It can be very difficult to avoid liability for documentation violations while at the same time avoiding liability under the discrimination provisions. Immigration Enforcement: I-9 Compliance Handbook offers guidance from Ann Allott, an attorney who has spent years practicing, writing, and speaking on just this problem. She offers easily understood, step-by-step procedures, sample forms and notices, and reference materials to point employers through this difficult area of immigration and employment law. Additional material is contributed by Daniel Kowalski, editor-in-chief of Bender's Immigration Bulletin, and by Edward F. Frazier, a long-time HR expert. emerging hot topics, thus adding new perspectives to conceptual modeling. This, the 20th ER conference, the first of the 21st century, was also the first one in Japan. The conference was held on November 27-30, 2001 at Yokohama National University with 192 participants from 31 countries. ER 2001 encompasses the entire spectrum of conceptual modeling, from theoretical aspects to implementations, including fundamentals, applications, and software engineering. In particular, ER 2001 emphasized e-business and reengineering. To meet this objective, we selected the following four topics and planned four international workshops: – International Workshop on Conceptual Modeling of Human/Organizational/Social Aspects of Manufacturing Activities (HUMACS 2001) Manufacturing enterprises have to confront a host of demands. The competitive climate, enhanced by communication and knowledge sharing, will require increasingly rapid responses to market forces. Customer demands for higher quality, better services, and lower cost will force manufacturers to reach new levels of flexibility and adaptability. Sophisticated customers will demand products customized to meet their needs. Industries have so far sought to cope with these challenges primarily through

advances in traditional capital by installing more powerful hardware and software technology. Attention to the role of humans combined with organizational and social schemes in manufacturing has only been marginal. The workshop HUMACS 2001 aimed to challenge the relevance of this last point.
