Our economy and future way of life depend on how well American manufacturing managers adapt to the dynamic, globally competitive landscape and evolve their firms to keep pace. A major challenge is how to structure the firms environment so that it attains the speed and low cost of high-volume flow lines while retaining the flexibility and customization potential of a low-volume job shop. The books three parts are organized according to three categories of skills required by managers and engineers: basics, intuition, and synthesis. Part I reviews traditional operations management techniques and identifies the necessary components of the science of manufacturing. Part II presents the core concepts of the book, beginning with the structure of the science of manufacturing and a discussion of the systems approach to problem solving. Other topics include behavioral tendencies of manufacturing plants, push and pull production systems, the human element in operations management, and the relationship between quality and operations. Chapter conclusions include main points and observations framed as manufacturing laws. In Part III, the lessons of Part I and the laws of Part II are

---

applied to address specific manufacturing management issues in detail. The authors compare and contrast common problems, including shop floor control, long-range aggregate planning, workforce planning and capacity management. A main focus in Part III is to help readers visualize how general concepts in Part II can be applied to specific problems. Written for both engineering and management students, the authors demonstrate the effectiveness of a rule-based and data driven approach to operations planning and control. They advance an organized framework from which to evaluate management practices and develop useful intuition about manufacturing systems.

Written by an experienced engineer, *Practical Career Advice for Engineers: Personal Letters from an Experienced Engineer to Students and New Engineers* is a series of personal conversation-style letters that offers practical career advice to all engineers. It guides them through their entire career from early education, to professional certification, on into the workplace, and eventually to retirement.

Important topics such as how to acquire leadership skills, improve communication skills, and develop the business side of engineering, as well as how to find a good engineering job, are also addressed. The book guides engineers on how to make good career decisions, using precise and systematic

processes. It offers inspiration and insight to student engineers and working engineers on how to have successful and satisfying educations and careers. It can also help experienced engineers to more effectively guide and mentor new engineers. It explores the important topics of creativity, ethics, intellectual property, and scientific principles in engineering and at the same time weaves real-world stories, concepts, diagrams, and tips throughout the book in the form of personal letters perfect for quick and easy comprehension. The book targets all engineers working in all disciplines, all industry sectors, and all locations. Engineering students can also learn more about a career in engineering and what they need to do to prepare for it by reading this book. Radovan Zdero, PhD, CEng, MIMechE, has decades of experience as an engineer and a mentor to engineers. His engineering background includes a master's degree in aerodynamics (McMaster University, Canada) and a doctoral degree in biomechanics (Queen's University, Canada). He is a Chartered Engineer, a Member of the Institution of Mechanical Engineers, and a Professor in the Division of Orthopaedic Surgery and the Department of Mechanical and Materials Engineering (Western University, Canada). He has published many scholarly research articles in peer-

Thinking about launching a new career or progressing in your existing career as a Field Application Engineer or a Technical Sales professional? Do you dream of a career visiting and helping engineers in multiple industries, international travel, and a great salary earned using your ever-increasing technical knowledge? If so, then this is the book for you. This book does not contain hundreds of acronyms and sales buzz words, nor is it full of details you will find in a corporate sales book. If you want a list of corporate jargon, this isn't the book for you. This book contains a set of hard-and-fast rules and techniques that will propel you out of your engineering comfort zone and into the exciting world of sales. If you have the engineering mentality-on or off, one or zero, black or white, binary way of thinking-this book's direct, efficient approach is just the thing you need to learn the skills required to find success in your new

career! The Author Before working in technical sales, Russell Jay Williamson had many years of design engineering experience. Experience in both a large multinational corporation with over 100,000 employees and a small company with only 11 employees has provided him with a great perspective on how Engineers work in this industry. Since switching into sales, he has developed the skills described in this book over many years from trial and error. This book describes these techniques that he has refined and will provide you, the reader, with the shortcuts you need so you don't waste years becoming the best Sales Engineer you can be.

This book reflects the shift in design paradigm in automobile industry. It presents future innovations, often referred as

“automotive systems engineering”. These cause fundamental innovations in the field of driver assistance systems and electro-mobility as well as fundamental changes in the architecture of the vehicles. New driving functionalities can only be realized if the software programs of multiple electronic control units work together correctly. This volume presents the new and innovative methods which are mandatory to master the complexity of the vehicle of the future.
