**Second Chance: How Career Changers Can Find a Great Job** IGI Global

From the time of Booker T. Washington to today, and William Julius Wilson, the advice dispensed to young black men has invariably been, "Get a trade." Deirdre Royster has put this folk wisdom to an empirical test—and, in *Race and the Invisible Hand*, exposes the subtleties and discrepancies of a workplace that favors the white job-seeker over the black. At the heart of this study is the question: Is there something about young black men that makes them less desirable as workers than their white peers? And if not, then why do black men trail white men in earnings and employment rates? Royster seeks an answer in the experiences of 25 black and 25 white men who graduated from the same vocational school and sought jobs in the same blue-collar labor market in the early 1990s. After seriously examining the educational performances, work ethics, and values of the black men for unique deficiencies, her study reveals the greatest difference between young black and white men—access to the kinds of contacts that really help in the job search and entry process.

This paper uses job applications- data to test the existence of non-competitive, ex-ante rents in the labor market. We first examine whether jobs that pay the legal minimum wage face an excess of labor as measured by the number of job applications received for the most recent positions filled by the firms. The results indicate that openings for jobs that pay the minimum wage attract significantly more job applications than jobs that pay either more or less than the minimum wage. This spike in the job application rate distribution indicates that ex-ante rents generated for employees by an above market-level minimum wage do not appear to be completely dissipated by employer actions. The second part of the paper uses a similar approach to examine whether jobs in high-wage industries pay above market-clearing wage rates. We find a weak, positive relationship between inter-industry applications differentials and inter-industry wage differentials. In addition, our results indicate that employer size has a sizeable positive effect on the job application rate even after controlling for the wage rate. The paper considers several possible explanations for

these findings.
