This individual Shop Manual is one unit of a series on agricultural wheel type tractors. Contained in it are the necessary specifications and the brief but terse procedural data needed by a mechanic when repairing a tractor on which he has had no previous actual experience. The material is arranged in a systematic order beginning with an index which is followed immediately by a Table of Condensed Service Specifications. These specifications include dimensions, fits, clearances and timing instructions. Next in order of arrangement is the procedures section. In the procedures section, the order of presentation starts with the front axle system and steering and proceeds toward the rear axle. The last portion of the procedures section is devoted to the power take-off and power lift systems. Interspersed where needed in this section are additional tabular specifications pertaining to wear limits, torquing, etc.

The United States has endured eleven recessions since the end of World War II, including the recession of 2007-2009. This book focuses on the performance of the economy and the actions taken during the expansion period before the onset of each recession. It's goal is to help prevent or at least lessen the severity of possible future recessions. Well-known economics writer Arthur Frumkin analyzes each of the eleven contemporary recessions to determine: What weaknesses appeared in the economy during the twelve months preceding the onset of the recession? What were economic forecasters predicting? What economics policy actions were taken by the Federal Reserve, the president, and Congress? Incorporating extensive

real-time data, Frumkin points to persistent failures over the past sixty years by the Federal Reserve and the president to forecast or to acknowledge the possibility of future recessions. Based on these findings, he concludes with a range of policy recommendations for avoiding or ameliorating future recessions.
