This book provides a discussion of the latest research pertaining to the hydraulic design of spillways and to hydraulic engineering in general. It comprises the papers of a workshop organized to bring together engineers and scientists from around the world for the exchange of ideas on water flow over stepped spillways. This workshop covered a range of subjects from two-phase flow characteristics to refurbishment and implementation of spillways in existing dam

structures, and the book also includes a number of illustrative case studies. Overall, this book is one of the first in the rapidly growing field of modern hydraulic engineering techniques. It will interest designers, scientists, and graduate students and researchers in the fields of hydraulic, civil and environmental engineering.

Gardeners know how helpful it is to be aware of what is happening in the garden from year to year – what germinates, flowers or fruits and when; how the weather affects flowering and fruiting seasons and harvests; issues with pests and so much more. A Gardener's Five Year Record Book from the RHS makes it easy to record what happens in the garden over a five-year period. Structured week by week, with five years to a view, it is flexible

enough for the user to choose a personal emphasis if desired. There are additional sections on Plants to Buy, Plant Suppliers, Useful Addresses and Gardens to Visit so essential information is all in one place. Illustrated with works of art from the RHS Lindley Libraries.

America, Incorporated Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date, covering many foundation types (shallow foundations, spudcans, driven piles, drilled shafts, rock sockets and helical piles) and a wide range of ground conditions (soil to soft rock). All databases with names prefixed by NUS are available upon request. This book presents a comprehensive evaluation of the model factor mean (bias) and coefficient of variation (COV) for ultimate and serviceability limit state based on these databases. These statistics can be used directly for AASHTO LRFD calibration. Besides load test databases, performance databases for other geo-structures and their model factor statistics are provided. Based on this extensive literature survey, a practical three-tier scheme for classifying the model uncertainty of geo-structures according to the model factor mean and COV is proposed. This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding – a concept already adopted in the Canadian Highway Bridge Design Code and being considered for the new draft for Eurocode 7

Part 1 (EN 1997-1:202x). The helical pile research in Chapter 7 was recognised by the 2020 ASCE Norman Medal. Restoring Canada's Native Prairies Haynes Manuals N. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right. I & T Shop Service Haynes Manuals N. America,

The decade also saw Britains release more than 400 new items, including New Deetail figures, which replaced the Eye Right and Swoppets lines, new metal figures, and the first aircraft for several decades, a helicopter. There was also a big expansion of farm models, including the first combine, for which Britains won the 1978 ' Toy of the Year' award. Britains Toy
