Alan Lomax is a legendary figure in American folk music circles. Although he published many books, hundreds of recordings and dozens of films, his contributions to popular and academic journals have never been collected. This collection of writings, introduced by Lomax's daughter Anna, reintroduces these essential writings.

Drawing on the Lomax Archives in New York, this book brings together articles from the 30s onwards. It is divided into four sections, each capturing a distinct period in the development of Lomax's life and career: the original years as a collector and promoter;

the period from 1950-58 when Lomax was recording throughout Europe; the folk music revival years; and finally his work in academia.

In 2012 several retailers, including Amazon and Walmart, experimented with same-day delivery. Home delivery of pizzas had been a very successful model in the United States and had been copied all over the world. In contrast, home delivery attempts by companies like Kozmo and Urbanfetch had failed and both companies went bankrupt. The goal of this case is to build a framework that helps students identify the factors that influence the success or failure of home delivery models. After analyzing and discussing the case, students should be able to: - Build a basic framework identifying supply chain

---

drivers that are influenced by a firm's decision to offer same-day home delivery -  
Understand the tradeoffs that influence the success of a same-day home delivery model -  
Identify qualitative factors to be considered when deciding between non-U.S. facility locations, including transportation time variability, consumer perceptions, and cultural differences.

Explores the great potential for nursing involvement in promoting global health. This unique text elucidates the relationship between global nursing and global health, underscoring the significance of nurses' contributions in furthering the Post-2015 Agenda of the

United Nations regarding global health infrastructures, and examining myriad opportunities for nurses to promote the 17 Sustainable Development Goals (SDGs) and foster health and healthy environments worldwide. While past nursing literature has emphasized nursing's potential involvement and influence in the global arena, this is the first book to identify, validate, and promote nurses' proactive and multidimensional work in furthering current transnational goals for advancing health on a global scale. The book includes an introduction to global health, clarification of terms and roles, perspectives on education, research, and theory related to global nursing, a history of the partnership between the United Nations and the

This book summarizes the advanced manufacturing technology of original innovations in hot stamping of lightweight car body. A detailed description of the technical system and basic knowledge of sheet metal forming is given, which helps readers quickly understand the relevant knowledge in the field. Emphasis has been placed on the independently developed hot stamping process and equipment, which help describe the theoretical and experimental research on key problems involving stress field, thermal field and phase transformation field in hot stamping process. Also, a description of the formability at elevated temperature and the numerical simulation algorithms for high strength steel hot stamping is given in combination with the experiments. Finally, the book

presents some application cases of hot stamping technology such as the lightweight car body design using hot stamping components and gradient hardness components, and the cooling design of the stamping tool. This book is intended for researchers, engineers and graduate students in vehicle engineering, mechanical engineering, especially in the field of advanced manufacturing technology.

The book also provides a useful reference for other new technology related temperature and phase transformation, such as aluminum-magnesium alloy hot stamping.

This volume contains the proceedings of the XIX International Colloquium on Mechanical Fatigue of

Metals, held at the Faculty of Engineering of the University of Porto, Portugal, 5-7 September 2018. This International Colloquium facilitated and encouraged the exchange of knowledge and experiences among the different communities involved in both basic and applied research in the field of the fatigue of metals, looking at the problem of fatigue exploring analytical and numerical simulative approaches. Fatigue damage represents one of the most important types of damage to which structural materials are subjected in normal industrial services that can finally result in a sudden and unexpected abrupt fracture. Since metal alloys are still today the most used materials in designing the majority of components and

---

structures able to carry the highest service loads, the study of the different aspects of metals fatigue attracts permanent attention of scientists, engineers and designers.
