Webster's Dictionary lists the term showman as "a notably spectacular, dramatic, or effective performer." In the art of drag racing, Hubert Platt checked all boxes. Known as the "Georgia Shaker," Platt cut his motoring teeth on the long straightaways and twisty back roads of South

Carolina while bootlegging moonshine. After a run-in with the law in 1958, Platt transferred his driving skills from illegal activity to sanctioned drag racing and began one of the most dominant runs in drag racing history until his retirement in 1977. After stints in 1957, 1938, and 1962 Chevrolets, Platt's next ride was a Z11 Impala, which carried his first "Georgia Shaker" moniker. Once Chevrolet pulled out of sanctioned racing, Platt found a new home with Ford for 1964 and

remained there until he hung up his helmet. Some of the cars he campaigned became icons in their own right. His factory-backed and personal machines included a 1963 Z11 Impala, 1964 Thunderbolt, 1965 Falcon, 1966 Mustang Funny Car, 1967 Fairlane 427, 1968-1/2 Cobra Jet, 1969 CJ Mustang, 1970 427 SOHC Mustang, and 1970 Boss 429 Maverick. A 1986 NHRA Hall of Fame member, Platt's lasting legacy on the sport can't be denied. Whether he was launching his Falcon

with the door open, conducting a Ford Drag Team seminar, or posting low E.T. at the 1967 US Nationals in his Fairlane, Platt's imprint on drag racing was all-encompassing. His son and biggest fan, Allen Platt, shares his dad's iconic career in, *Hubert Platt: Fast Fords of the "Georgia Shaker"!*

This book explores the intersection between artificial intelligence and two intellectual property rights: copyright and patents. The increasing use of

artificial intelligence for generating creative and innovative output has an impact on copyright and patent laws around the world. The book aims to map and analyse that impact. The author considers how artificial intelligence systems may aid, or in some cases substitute for, human creators and inventors in the creative process. It is from this angle that the copyright and patent regimes in four jurisdictions (Europe, the United States, Australia and Japan) are investigated in depth. The author describes how these jurisdictions look at works and inventions generated through a process where artificial intelligence is present or prevalent, and examines how

copyright and patent regimes should adapt to the reality of artificially intelligent creators and inventors. As the use of artificial intelligence to generate creative and innovative products becomes more common, this book will be a valuable resource to researchers, academics and policy makers alike.

Follow two abolitionists who fought one of the most shockingly persistent evils of the world: human trafficking and sexual exploitation of slaves. Told in alternating chapters from perspectives spanning more than a century apart, read the riveting 19th century first-hand account of Harriet Jacobs and the modern-day eyewitness account of Timothy Ballard. Harriet Jacobs was an African-American, born into slavery in North Carolina in 1813. She thwarted the sexual advances of her master for years until she escaped and hid in the attic crawl space of her

grandmother's house for seven years before escaping north to freedom. She published an autobiography of her life, *Incidents in the Life of a Slave Girl*, which was one of the first open discussions about sexual abuse endured by slave women. She was an active abolitionist, associated with Frederick Douglass, and, during the Civil War, used her celebrity to raise money for black refugees. After the war, she worked to improve the conditions of newly-freed slaves. As a former Special Agent for the Department of Homeland Security who has seen the horrors and carnage of war, Timothy Ballard founded a modern-day "underground railroad" which has

rescued hundreds of children from being fully enslaved, abused, or trafficked in third-world countries. His story includes the rescue and his eventual adoption of two young siblings--Mia and Marky, who were born in Haiti. Section 2 features the lives of five abolitionists, a mix of heroes from past to present, who call us to action and teach us life lessons based on their own experiences: Harriet Tubman--The "Conductor"; Abraham Lincoln--the "Great Emancipator"; Little Mia--the sister who saved her little brother; Guesno Mardy--the Haitian father who lost his son to slave traders; and Harriet Jacobs--a teacher for us all.

Two-phase flow heat exchangers are vital components of systems for power generation, chemical processing, and thermal environment control. The art and science of the design of such heat exchangers have advanced considerably in recent years. This is due to better understanding of the fundamentals of two-phase flow and heat transfer in

simple geometries, greater appreciation of these processes in complex geometries, and enhanced predictive capability through use of complex computer codes. The subject is clearly of great fundamental and practical importance. The NATO ASI on Thermal-Hydraulic Fundamentals and Design of Two-Phase Flow Heat Exchangers was held in Povo de Varzim (near Porto), Portugal, July 6-17, 1987. Participants in the organization of the ASI were the Department of Mechanical Engineering and the Clean Energy Research Institute,

University of Miami;

Department of Mechanical
