Differential Diagnosis of Chest Pain Lippincott Williams & Wilkins

M. WILKINSON Patients with frequent or daily headaches pose a very difficult problem for the physician who has to treat them, particularly as many patients think that there should be a medicine or medicines which give them instant relief. In the search for the compound which would meet this very natural desire, many drugs have been manufactured and the temptation for the physician is either to increase the dose of a drug which seems to be, at any rate, partially effective, or to add one or

more drugs to those which the patient is already taking. Although there have been some references to the dangers of overdosage of drugs for migraine in the past, it was not until relatively recently that it was recognized that drugs given for the relief of headache, if taken injudiciously, may themselves cause headache. The first drugs to be implicated in this way were ergotamine and phenazone. In the case of ergotamine tartrate, the dangers of ergotism were well known as this was a disorder which had been known and written about for many years. In the treatment of headache, fully blown ergotism is rare and in recent years has usually been due to self-medication in doses much greater than those prescribed although there are a few recorded cases where toxic amounts have been given.

young adults. The spread of new pathogens and the threat of antimicrobial resistance pose particular challenges in combating these diseases. Major Infectious Diseases identifies feasible, cost-effective packages of interventions and strategies across delivery platforms to prevent and treat HIV/AIDS, other sexually transmitted infections, tuberculosis, malaria, adult febrile illness, viral hepatitis, and neglected tropical diseases. The volume emphasizes the need to effectively address emerging antimicrobial resistance, strengthen health systems, and increase access to care. The attainable goals are to reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

Measuring Disease Rena Cipta Mandiri
Islam sangat berkontribusi dalam praktik keperawatan saat itu, dua hal yang menjadi

dasar perubahan praktik keperawatan saat itu adalah kebersihan dan kesyirikan. Sebelum masuk Islam, Rufaidah tidak memperhatikan kebersihan dari tempat praktiknya, sehingga nampak kumuh dan kotor, tentunya hal ini membuat pasien tidak nyaman. Setelah masuk Islam, ia menyadari pentingnya kebersihan karena Islam mengajarkan kebersihan. Baik kebersihan diri, kebersihan tempat praktik dan kebersihan saat melakukan tindakan. Hal kedua yaitu kesyirikan. Sebelum masuk Islam ia selalu memberikan jampi jampi saat mengobati pasien. Namun setelah masuk Islam, jampi-jampi ia tinggalkan dan menggantinya dengan doa-doa yang diajarkan oleh Rasulullah . Namun, nampaknya sejarah terulang kembali, dulu jampi-jampi dilafalkan

secara jelas, tapi saat ini jampi-jampi sudah bertransformasi dan dibingkai seolah-olah ilmiah. Misalnya memberikan sugesti kepada pasien bahwa tubuhnya mampu menyembuhkan dirinya sendiri, hanya butuh yakin saja. Atau menyakini bahwa obat yang diberikan akan mampu menyembuhkannya. Keadaan ini memberi kesempatan kepada kita untuk turut mengulang sejarah, yaitu menjadikan profesi perawat sebagai jalan dakwah, seperti yg dulu telah dilakukan oleh Rufaidah. Hal sederhana yang mungkin bisa kita lakukan adalah dengan mengajak pasien berdoa sebelum kita berikan intervensi keperawatan dan mengajak pasien untuk yakin bahwa kesembuhan hanya dari Allah bukan dari obat, perawat atau dokter. Menjadikan profesi perawat sebagai jalan dakwah tentunya bukan hanya semata-mata fokus ibadah untuk dirinya sendiri seperti sholat, puasa, tilawah, dll. Namun harusnya turut menjaga pasien agar selama sakit tetap dekat dan taat kepada Allah, menjaga hatinya agar tetap bersih (Qolbun salim) karena itulah yang dibutuhkan seorang hamba saat bertemu Rabb-Nya. Dengan demikian inilah peran kita dalam menjadikan Profesiku Jalan Dakwahku. Manajemen Pola Hidup Sehat (Rahasia Hidup Sehat Sampai Tua) Elsevier Health Sciences

Focusing on the mother's experience of pain and her contribution to its control, this accessible text covers the background to historical and scientific understanding of pain and considers methods of researching

and measuring pain. Now in its 2nd edition, *Pain in Childbearing and its Control* explores pregnancy, labour and puerperal pain, along with fetal and neonatal pain. As well as approaching the topic in considerable depth, the word 'pain' is interpreted broadly. Throughout the text, research-based theoretical approaches to pain and pain control are presented within the context of care. The possibility of caring interventions being iatrogenic, or aggravating the woman's pain, lends this book a perceptively political orientation. *Pain in Childbearing and its Control* will be invaluable to midwives and a wide range of care providers who seek to assist the woman in coping with her experience of childbearing and any associated pain.
