From 'Cancer Patient' to 'Cancer Survivor' Springer Issues of Cancer Survivorship addresses the issues of experiencing life with cancer, from diagnosis to living with and beyond cancer. It focuses on the psychological impact of cancer, including psychological distress, the uncertainty, the short-term and long-term side effects of treatments, body image issues, spirituality/religious issues, impact of the disease on finances, impact on family relationships, and social support. In addition, the book covers cancer in children and secondary cancers as a result of the treatment they received, which is increasingly an issue as patients are living longer.

Synopsis Are you or is someone you love facing a cancer diagnosis in the prime of life? You ' re not alone. The likelihood of developing cancer in one ' s lifetime is 1 in 2 for males and 1 in 3 for females, and the numbers are rising. A cancer diagnosis at any age is traumatic, but young to middle-aged adults who are often raising or planning for children, establishing careers, and getting on their financial feet face unique challenges. When cancer strikes, this group can become overwhelmed by navigating treatment options, mounting debt from medical bills, threats to fertility, and the necessity of facing one ' s mortality. It can become a mental battle ground. In Not Now, Cancer, I ' m Busy, Melissa Trevathan-Minnis and Deanne Meeks Brown offer research, resources, and support to help you overcome the psychological trauma of cancer. Sharing their own personal stories, along with insights from other young cancer survivors, these two mental health professionals guide you through the rollercoaster of emotions from diagnosis and treatment to transitioning back to life post-treatment. While the challenges of cancer survivorship are many, so are the coping strategies available to help promote recovery and well-being. Not Now, Cancer, I ' m Busy, addresses cancer through the lens of mental health and offers strategies to not only cope with the challenges of cancer, but to build a life full of meaning and intention despite them. From developing a fighting spirit and learning how to slow down, to breaking down barriers to mental health and spiritual growth, this book will help you tap into your personal strengths and resilience. Although a cancer diagnosis in early and midlife can be earth-shattering, the trauma of cancer can actually leave you stronger and better equipped-if you let it. WORDS OF PRAISE OMG! This is a fabulous book--the one everyone dealing with cancer has been waiting for! While the book is specifically addressed to YMA's (Young and Middle Adults) it is an exhaustive compendium of experience, issues, and directions for all those touched in any way by cancer—victims, survivors, family, friends and the rest of us who care in one way or another. From diagnosis to survivorship or to disability and death Melissa and Deanne offer amazingly comprehensive research, suggestions, and enlightenment at every step of the journey they take us on. Most interesting to me as a psychologist-psychoanalyst and survivor of cancer at age 21 are the sections on post-traumatic growth, developing a personal narrative, and the progression from surviving to thriving. Not Now, Cancer is an absolute triumph by two people who artfully weave their personal thriving experiences of themselves and of their families and friends with a wealth of incredible details of their cancer experiences that are equally well applicable to people of all ages who are faced with life-threatening diagnoses or circumstances. Congratulations Melissa and Deanne and thanks. --Lawrence Hedges, PhD, PsyD, ABPP, Director, the Listening Perspectives Study Center

The 2006 Institute of Medicine (IOM) consensus study report From Cancer Patient to Cancer Survivor: Lost in Transition made recommendations to improve the quality of care that cancer survivors receive, in recognition that cancer survivors are at risk for significant physical, psychosocial, and financial repercussions from cancer and its treatment. Since then, efforts to recognize and address the unique needs of cancer survivors have increased, including an emphasis on improving the evidence base for cancer survivorship care and identifying best practices in the delivery of high-quality cancer survivorship care. To examine progress in cancer survivorship care since the Lost in Transition report, the National Cancer Policy Forum of the National Academies of Sciences, Engineering, and Medicine held a workshop in July 2017, in Washington, DC. Workshop participants highlighted potential opportunities to improve the planning, management, and delivery of cancer survivorship care. This publication summarizes the presentations and discussions from the workshop.

The Cancer Survivor's Guide Springer Science & Business Media
This authoritative reference examines in depth the myriad challenges facing

pediatric cancer survivors and proposes a robust framework for structured follow-up of these patients through adulthood. Approaches to long-term follow-up include both established models of care and targeted models of lifelong surveillance of late effects by bodily systems and neurological outcomes. Sections devoted to quality of life and re-entry after treatment focus on key concerns such as health risk behaviors, school and career issues, psychological challenges, and care disparities. And a robust resources section adds extra usefulness to the expert coverage. Among the Handbook's topics: • Developmental considerations in the transition from child and adolescent to adult survivorship. • Long-term follow-up roadmaps by disease and treatment. • Neuropsychological effects of pediatric brain tumors and associated treatment. • Building resiliency in childhood cancer survivors: a clinician's perspective. • School issues and educational strategies for survivors of childhood cancer. • Educating and preparing the childhood cancer survivor for long-term care: a curriculum model for cancer centers. A work of rare scope, scholarship, and clinical acumen, the Handbook of Long-Term Care of the Childhood Cancer Survivor is a rewarding, practice-building resource essential to a wide range of healing professionals, including primary care physicians, pediatricians, oncologists, nurses, psychologists, neuropsychologists, child psychologists, and licensed therapists.

This book provides the necessary information about not only the clinical aspects of caring for cancer survivors, but also the psychosocial impacts. There are multiple resources available to serve as oncology textbooks, but nothing to provide the necessary information on patient care for the non-MD members of the cancer patient management team. In the post-treatment phase, the management team must go beyond the realm of "conventional" follow-up, helping the patient to intellectually understand and emotionally grasp the path ahead. Cancer Survivorship will prove a vital tool to physicians, nurses, clinical social workers and mental health professionals.

This book is a marvelous compendium of eight articles that cover a wide range of topics, including breast cancer: management and survivorship, rectal cancer intersphincteric resection, head and neck cancer diagnosis and radiotherapy, synthetic peptides as antitumor agents, and recent advances in thyroid cancer. It has been a wonderful opportunity to co-edit this special edition. We are greatly appreciative of the work of all the contributors to the book, who brought with them tremendous diversity of perspectives and fields truly reflective of the complexity of the topic and who, through coming together in this project, serve as a nidus of the multidisciplinary collaboration in this field. Finally, we must acknowledge the thousands of cancer patients who have participated in the studies that have provided the information that has advanced the field so greatly in recent years.

Health Services for Cancer Survivors Jones & Bartlett Learning
This book provides a contemporary and comprehensive examination of cancer in everyday life, drawing on qualitative research with people living with cancer, their family members and health professionals. It explores the evolving and enduring affects of cancer for individuals, families and communities, with attention to the changing dynamics of survivorship, including social relations around waiting, uncertainty, hope, wilfulness, obligation, responsibility and healing. Challenging simplistic deployments of survivorship and drawing on contemporary and classical social theory, it critically examines survivorship through innovative qualitative methodologies including interviews, focus groups, participant produced photos and solicited diaries. In assembling this panoramic view of cancer in the twenty-first century, it also enlivens core debates in sociology, including questions around individual agency, subjectivity, temporality, normativity, resistance, affect and embodiment. A thoughtful account of cancer embedded in the undulations of the everyday, narrated by its subjects and those who informally and formally care for them, Survivorship: A Sociology of Cancer in Everyday Life outlines new ways of thinking about survivorship for sociologists, health and medical researchers and those working in cancer care settings.

Asian Americans encounter a range of health issues often unknown to the American public, policy makers, researchers and even clinicians. National research often combines Asian Americans into a single category, not taking into account the differences and complexity among Asian ethnic subgroups. The definition of Asian American derives from the U.S. Census Bureau ' s definition of Asian, which includes peoples from all the vast territories of the Far East, Southeast Asia and the South Asian Subcontinent. While Census classifications determine demographic measurements that affect equal opportunity programs, the broad rubric “ Asian-American ” can never describe accurately the more than 50 distinct Asian American subgroups, who together comprise multifaceted diversity across cultural ethnicities, socio-economic status, languages, religions and generations. This volume rectifies that situation by exploring the unique needs and health concerns of particular subgroups within the Asian American community. It consolidates a wide range of knowledge on various health issues impacting Asian Americans while also providing a discussion into the cultural, social, and structural forces impacting morbidity, mortality and quality of life. The volume is designed to advance the understanding of Asian American health by explaining key challenges and identifying emerging trends faced in specific ethnic groups and diseases/illnesses, innovative community-based interventions and the future needed areas of research.

Work and Cancer Survivors Springer
Not long ago, a cancer diagnosis was regarded as an automatic death sentence; today there are ten million survivors. Equally impressive is the growing number of clinicians and researchers dedicated to improving the quality of survivors ' lives and care. Yet despite this encouraging picture, there has never been a reliable central source for relevant clinical information — until now. This book, written by a cancer survivor and sixty other top scientist-practitioners, responds to the diverse needs of survivors and their support communities by comprehensively addressing the major issues in the field, from the burden of survivorship to secondary prevention. Not Now, Cancer, I'm Busy John Wiley & Sons
Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer--including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life--cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.

Patients with breast and gynaecological cancers have to contend with a large number of difficult and challenging issues. To help them to do this it is vital that their health carers are fully informed in all aspects of women's cancers. This book provides a comprehensive and meaningful picture of this oncological area, including epidemiology, histopathology, staging, genetic predisposition, sexual function, fertility, treatment and management, survivorship, and palliative care. To give this book added credibility and holistic application, contributions of women with cancer have been included, and the text is interspersed with patient accounts and experiences. Women's Cancers is essential reading for all nurses and health care professionals working in cancer care settings, as well as patients and families.

Principles of Tumors: A Translational Approach to Foundations, Second Edition, provides a concise summary of translational/interdisciplinary topics on the various aspects of tumors, especially abnormalities in their cells, their causes and effects on patients. Topics discussed include how genomic abnormalities in tumors may result from the actions of carcinogens and how genomic changes determine the cell biological/morphological abnormalities in tumor cell populations. In addition, the relationships between tumor cell genomics and therapeutic outcomes are described. There are also supporting appendices on general bioscience, including the principles of histology (the cells and tissues of the body), genetics, pathology, radiology and pharmacology. This book gives a thorough, detailed, yet concise account of the main bioscience, clinical and therapeutic aspects of tumors. It emphasizes the translational aspects of research into tumors with extensive discussions of interdisciplinary issues. The content in this book will be invaluable for researchers and clinicians involved in collaborative projects where it is necessary to understand fundamental issues in other branches of biomedicine. Presents content that has been totally updated with the most recent developments of the field, including new chapters on tumor imaging exams, new surgical techniques, immunotherapy, gene therapy, and several novel therapies using natural and synthetic compounds

Presents translational approaches for every topic to improve conceptual insights for new research projects

Covers a broad range of subjects, making it easier for the reader to understand related fields
