There ' s never been a better time to " be prepared. " Matthew Stein ' s comprehensive primer on sustainable living skills—from food and water to shelter and energy to first-aid and crisis-management skills—prepares you to embark on the path toward sustainability. But unlike any other book, Stein not only shows you how to live " green " in seemingly stable times, but to live in the face of potential disasters, lasting days or years, coming in the form of social upheaval, economic meltdown, or environmental catastrophe. When Technology Fails covers the gamut. You ' ll learn how to start a fire and keep warm if you ' ve been left temporarily homeless, as well as the basics of installing a renewable energy system for your home or business. You ' ll learn how to find and sterilize water in the face of utility failure, as well as practical information for dealing with water-quality issues even when the public tap water is still

flowing. You ' ll learn alternative techniques for healing equally suited to an era of profit-driven malpractice as to situations of social calamity. Each chapter (a survey of the risks to the status quo; supplies and preparation for short- and long-term emergencies; emergency measures for survival; water; food; shelter; clothing; first aid, low-tech medicine, and healing; energy, heat, and power; metalworking; utensils and storage; low-tech chemistry; and engineering, machines, and materials) offers the same approach, describing skills for self-reliance in good times and bad. Fully revised and expanded—the first edition was written pre-9/11 and pre-Katrina, when few Americans took the risk of social disruption seriously—When Technology Fails ends on a positive, proactive note with a new chapter on "Making the Shift to Sustainability," which offers practical suggestions for changing our world on personal, community and global levels.

Life is full of tough calls and daunting decisions. The question isn't if you'll face a big decision in the future, but how you'll face the tough call that's guaranteed to come your way. Think about it. There are wedding proposals to ponder, college applications to submit, career moves to make, homes to sell, and confrontations to consider. And, knowing how poorly things could go, we sometimes find ourselves facing these decisions with a deep fear of future regret. The pressure is on. Or is it?

Short and straightforward, yet full of practical insight and spiritual truths, Tough Call, will help you see that the Christian faith offers a mindset to confidently and joyfully make your next big decision. More importantly you'll see that you can face life with your fears recognized, your peace maximized, and your hope anchored in something greater than your ability to "get it right." Readers familiar with authors like Acuff, Chan, and Tchividjian will resonate with Matt Popovits's witty, practical, and gospel-centered take on complicated topics. Tough Call is an enjoyable and essential read for any and all facing a major decision. [The Epic Journeys of Morgan & Clarke](#) CreateSpace

**The Construction Chart Book** The Essential Guide to Framing

Here is your opportunity to own a copy of the latest version of A Roof Cutter's Secrets (2012). This is the very book that many believe revolutionized the modern home framing industry. It has been the go to reference book of choice for rough carpenters since the late 80s. It remains unrivaled in popularity and relevance. In 350 pages of clear, concise instructions, including over 300 drawings and photos, professional roof cutter Will Holladay shares the knowledge he has gathered over his lengthy career in rough carpentry. There are speed and production tricks/techniques from his years as a roof cutter and stacker in the Los Angeles housing tracts during the 70s; complicated custom home framing methodology from his years as a high end framing contractor along the California Coast during the 80s - 90s; and finally lessons learned from various arcane and oddball situations that he has faced through the 00s and onward as a framing consultant. In KISS format, Will presents the how to principles required to conquer nearly any type of complicated framing challenge. From steep hillside lot underpinning to detailing plates, from plumb and line issues to beam work, from regular roofs to unequal pitch versions, from

bastard intersections to polygon and round shaped roofs, from eyebrow dormers to hanging fascia, from simple stair layout to elaborate circular staircase construction, from pop-out Bay windows to chandelier domes - it is all there. Situations not found anywhere else. The amount of information jam packed into this book is absolutely amazing! There is even a special section at the end of the book devoted specifically to applying the Construction Master Calculator to various situations found in the book. A Roof Cutter's Secrets is one resource that you will most certainly want to keep in your tool box. So, no matter where you fit in the construction industry apprentice, journeyman, foreman, supervisor, contractor or architect you're bound to pick up some new techniques and methods from A Roof Cutter's Secrets that will help increase job site productivity and improve the delivered job quality.

The Pat Fay Method of Home Construction is a Construction Management Book written for the homeowner. Home Construction is far too expensive and the Pat Fay Method teaches the homeowner how to build or remodel for \$100/SF or less without a General Contractor. The homeowner does not need to be an expert in construction to be successful in their home remodel or new construction; they do need to be efficient managers who follow The Pat Fay Method. This book has chapters on Planning and Preliminary Design, Construction Meetings, Final Design, Scheduling, Permitting, Insurance, Project Safety, Contract Documents, Change Orders, The Contractor, Using Competition to drive down costs, Construction Materials, The Construction Phase, Cost Estimating, and Construction Management forms. This book was written as a result of the experiences the author (a mechanical engineer with over 20 years of industrial and commercial construction management experience) had while managing the construction of his new home in Seattle. He found that the rules of the industrial construction world do not apply to the world of home construction. The author and his wife successfully managed all the phases of construction and had a 3,500 SF house built by 30 different contractors for only \$65/SF.

This accomplishment can be duplicated by any homeowner but only if they follow the Pat Fay Method. If the homeowner turns over their home construction project to a General Contractor then the cost will be far too high. One of the problems for homeowners is that they only do one or two major remodels or construction projects in a lifetime. The typical homeowner is just not prepared to handle the issues inherent to working with home construction contractors without this book. For example, can you answer these simple but consequently expensive questions: what is your construction theme, how do you write a simple scope of work, how do you find good contractors, how do you handle unexpected change orders, how do you ensure quality materials are used on your project, how do you pay the contractor, how do you get your lien release, and how will the homeowner resolve a dispute with their contractor? If you cannot answer these simple questions then you need this book.
