Providing a distillation of knowledge in the various disciplines of arts education (dance, drama, music, literature and poetry and visual arts), this essential handbook synthesizes existing research literature, reflects on the past, and contributes to shaping the future of

the respective and integrated disciplines of arts education. While research can at times seem distant from practice, the Handbook aims to maintain connection with the live practice of art and of education, capturing the vibrancy and best thinking in the field of theory and practice. The Handbook is organized into 13 sections, each focusing on a major area or issue in arts education research.

The undergraduate years are a special time of life for many students. They are a time for study, yes, but also a time for making

independent decisions over what to do beyond formal education. This book is based on a nine-year study of collegiate a cappella - a socio-musical practice that has exploded on college campuses since the 1990s. A defining feature of collegiate a cappella is that it is a student-run leisure activity undertaken by undergraduate students at institutions both large and small, prestigious and lower-status. With rare exceptions, participants are not music majors yet many participants interviewed had previous musical experience both in and out of school settings.

Motivations for staying musically involved varied considerably - from those who felt they could not imagine life without a musical outlet to those who joined on a whim. Collegiate a cappella is about much more than singing cover songs. It sustains multiple forms of inequality through its audition practices and its performative enactment of gender and heteronormativity. This book sheds light on how undergraduates conceptualize vocation and avocation within the context of formal education, holding implications for educators at all levels.

This book is a reflection of our collective experiences in teaching research to both beginning and advanced graduate music education students. These experiences include introducing master-level students to basic concepts of research, developing skills of critical analysis in doctoral

students, and guiding doctoral candidates in dissertation work. In all these situations it appears that the main problem in bringing research close to the minds of the students lies in their diverse views of what music education is.

to music literature. It clearly describes various information-searching techniques and library-based organizational systems and introduces the array of music resources available. Pauline Shaw Bayne has cleanly organized the material in three succinct parts, allowing for three independent

tracks of study. Part I treats essentials of the research process. It explains starting point resources like library catalogs, dictionaries, and bibliographies; addresses scholarly documentation, the use of style manuals, and basics of copyright; and provides samples of common written

research products. Part 2 develops skills and strategies for library and Internet-based research, describing database structures and library catalogs, subject searching in catalogs and journal indexes, keyword searching techniques, related-record searching and citation databases,

and the use of experts, the Internet, and thematic catalogs. In Part 3, Bayne describes music uniform titles and select resources that follow the organization of a music library, such as score collections, books and journals in music literature, and music teaching publications. Each chapter concludes with an overview of music learning exercises to aid the students' concept application and skill development. Appendixes provide short cuts to specific topics in library organizational systems, including Library of Congress Subject Headings and Classification. The concluding bibliography provides a quick overview of literature and resources, emphasizing electronic and print publications since 2000, but including standard references that all music researchers should know.

understood and facilitated across music education settings? What is the power of creativity in enhancing individual and group learning? How is musical creativity used as a tool for cross-community integration? How can we research the interactions of those engaged in musical activities aimed at creative development? These are just some of

the questions addressed in this fascinating new monograph. *Musical Creativity Revisited* is an authoritative volume of insights from theory, practice-based research and methodological analyses. Its chapters celebrate the diversity of the many different ways in which young and adult learners develop musical

creativity. Following on from *Musical Creativity: Insights from Music Education Research* (Ashgate, 2012) Odena offers novel examples from practice and precise suggestions on how to research it. This book will be an essential point of reference for students, researchers, practitioners and practitioner-researchers interested in music

education and creativity across the arts and social sciences. The chapters have been organized into three sections - Foundations, Practices and Research - including examples from in-depth studies focussed on a secondary school in England, higher music education in Spain and out-of-school settings in Northern Ireland. This is a book

that will fascinate readers, inspiring them to think deeply about the many different ways in which musical creativity can be developed, its purposes and how to research it. This blending could take place in a range of contexts that may span an individual study to a lifelong research agenda. Additionally, pluralistic ideals would guide the addressing of questions as a community. The volume also illuminates the work of innovative music education researchers who

are constructing pluralistic research studies and agendas, and advocate for the music education profession to embrace such an approach in order to advance shared research goals. The ramifications of this transformation in music education research are a subject of discussion, including the implications for researcher education and the challenges inherent in conducting and disseminating such research.
