This book presents refereed and revised papers presented at GREC 2001, the 4th IAPR International Workshop on Graphics Recognition, which took place in Kingston, Ontario, Canada in September 2001. Graphics recognition is a branch of document image analysis that focuses on the recognition of two-dimensional notations such as engineering drawings, maps, mathematical notation, music notation, tables, and chemical structure diagrams. Due to the growing demand for both off-line and on-line document recognition systems, the field of graphics recognition has an exciting and promising future. The GREC workshops provide an opportunity for researchers at all levels of experience to share insights into graphics recognition methods. The workshops enjoy strong participation from researchers in both industry and academia. They are sponsored by IAPR TC-10, the Technical Committee on Graphics Recognition within the International Association for Pattern Recognition. Edited volumes from the previous three workshops in this series are available as Lecture Notes in Computer Science, Vols. 1072, 1389, and 1941. After the GREC 2001 workshop, authors were invited to submit enhanced versions of their papers for review. Every paper was evaluated by three reviewers. We are grateful to both authors and reviewers for their careful work during this review process. Many of the papers that appear in this volume were thoroughly revised and improved, in response to reviewers' suggestions.

No two learners are the same. They take different approaches to learning tasks and they respond to formal education in different ways. Yet the current emphasis in education is on what is common to learners, from a common curriculum to a common teaching method. *Individual Learners* reviews and discusses recent research that shows that differences in personality contribute

significantly to children's and adults' experiences of success and failure in education. *Individual Learners* considers fundamental issues in the study of personality, and provides an up-to-date review and evaluation of the continuing nature-nurture debate. It then examines five traits that can have an impact upon learning: aggressiveness, anxiety, achievement, motivation, self-confidence and shyness. The book provides an accessible account of the recent research into the links between personality and education and its implications for educational practice. It will be invaluable to anyone with an interest in education, whether students, teachers or lecturers.

With 2005's acclaimed and controversial *The New World*, one of cinema's most enigmatic filmmakers returned to the screen with only his fourth feature film in a career spanning thirty years. While Terrence Malick's work has always divided opinion, his poetic, transcendent filmic language has unquestionably redefined modern cinema, and with a new feature scheduled for 2008, contemporary cinema is finally catching up with his vision. This updated second edition of *The Cinema of Terrence Malick: Poetic Visions of America* charts the continuing growth of Malick's oeuvre, exploring identity, place, and existence in his films. Featuring two new original essays on his latest career landmark and extensive analysis of *The Thin Red Line*-Malick's haunting screen treatment of World War II-this is an essential study of a visionary poet of American cinema.

While Robert Putnam's *Bowling Alone* (2000) highlighted the notion of volunteerism, little attention has been paid to religion's role in generating social capital--an ironic omission since religion constitutes the most common form of voluntary association in America today. Featuring essays by prominent social scientists, this is the first book-length, systematic examination of the relationship between religion and social capital and what effects religious social capital has on democratic life in the United States.

What is text mining, and how can it be used? What relevance do these methods have to everyday work in information science and the digital humanities? How does one develop competences in text mining? Working with Text provides a series of cross-disciplinary perspectives on text mining and its applications. As text mining raises legal and ethical issues, the legal background of text mining and the responsibilities of the engineer are discussed in

this book. Chapters provide an introduction to the use of the popular GATE text mining package with data drawn from social media, the use of text mining to support semantic search, the development of an authority system to support content tagging, and recent techniques in automatic language evaluation. Focused studies describe text mining on historical texts, automated indexing using constrained vocabularies, and the use of natural language processing to explore the climate science literature. Interviews are included that offer a glimpse into the real-life experience of working within commercial and academic text mining. Introduces text analysis and text mining tools Provides a comprehensive overview of costs and benefits Introduces the topic, making it accessible to a general audience in a variety of fields, including examples from biology, chemistry, sociology, and criminology

This book offers readers a comprehensive understanding of problem-based learning (PBL) in teacher education. Featuring the perspectives of experienced teacher educators, it details the strengths of problem-based learning pedagogy as well as identifies continuing challenges and future possibilities. The book explains the goals, content, processes and strategies of a successful and longstanding problem-based learning teacher education program at the University of British Columbia. It features contributions from tutors, faculty, school administrators, faculty advisors, school advisors, librarians and pre-service teachers who share their perspectives about problem-based learning as a robust and exciting approach for teaching and learning. Overall, the contributors to the book discuss the history of the program, its implementation and future directions. In the process, readers discover the ways that problem-based learning has succeeded in preparing educators to teach diverse learners and acquire the professional dispositions necessary for teaching in today's multilingual/multicultural classrooms.

The last decade has been one of dramatic progress in the field of Natural Language Processing (NLP). This hitherto largely academic discipline has found itself at the center of an information revolution ushered in by the Internet age, as demand for human-computer communication and information access has exploded. Emerging applications in computer-assisted information production and dissemination, automated understanding of news, understanding of spoken language, and processing of foreign languages have given impetus to research that resulted in a new generation of robust tools, systems, and commercial products. Well-positioned government research funding, particularly in the U. S. , has helped to advance the state-of-the art at an unprecedented pace, in no small measure thanks to the rigorous 1 evaluations. This volume focuses on the use of Natural Language Processing in Information Retrieval (IR), an area of science and technology that deals with cataloging, categorization, classification, and search of large amounts of information, particularly in textual form. An outcome of an information retrieval process is usually a set of documents containing information on a given topic, and may consist of newspaper-like articles, memos, reports of any kind, entire books, as well as annotated image and sound files. Since we assume that the information is primarily encoded as text, IR is also a natural language processing problem: in order to decide if a document is relevant to a given information need, one needs to be able to understand its content.

This manual describes methods and resources for practitioners and decision-makers to use for enacting new laws or regulations or amending existing ones as part of a comprehensive road safety strategy. The manual covers steps to be taken to address five main risk factors and post-crash care. It can therefore be used to: * develop an understanding of the framework of legislation and relevant processes that are applicable in a country * review current national legislation and regulations and identify gaps that hinder implementation and enforcement of effective road safety measures * identify available resources, including international agreements, evidence-based guidance and recommendations on effective measures, to improve legislation * prepare action plans to strengthen national legislation and regulations for the five main risk factors and for post-crash care, including advocating for improvement. Other important topics should also be addressed to achieve a comprehensive national system of road safety legislation and regulation; however, they are beyond the scope of this manual. They include: vehicle and helmet manufacturing standards and testing, third-party insurance, victim's rights and compensation, a graduated driver licensing system, road audits and design standards and driving hours for commercial drivers.

The Global status report on road safety 2018 launched by WHO in December 2018 highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians cyclists and motorcyclists in particular those living in developing countries. The report suggests that the price paid for mobility is too high especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

A big amount of important, 'economically relevant' information, is buried within the huge mass of multimedia documents that correspond to some form of 'narrative' description. Due to the ubiquity of these 'narrative' resources, being able to represent in a general, accurate, and effective way their semantic content - i.e., their key 'meaning' - is then both conceptually relevant and economically important. In this book, we present the main properties of NKRL ('Narrative Knowledge Representation Language'), a language expressly designed for representing, in a standardised way, the 'meaning' of complex multimedia narrative documents. NKRL is a fully implemented language/environment. The software exists in two versions, an ORACLE-supported version and a file-oriented one. Written from a multidisciplinary perspective, this exhaustive description of NKRL and of the associated knowledge representation principles will be an invaluable source of reference for practitioners, researchers, and graduates.

The authors offer a perspective of how to integrate public space and public life. They contend that three critical human dimensions should guide the process of design and management of public space: the users' essential needs, their spatial rights, and the meanings they seek.

Body Image: Understanding Body Dissatisfaction in Men, Women and Children presents a review of what is presently known and the results of some new research on body image. It compares the effects of gender, sexuality, social class, age and ethnicity on satisfaction with the way we look and suggests how these differences arise. Why, for instance, are heterosexual men much happier with their body images than women or gay men? Sarah Grogan discusses the effect of media presentation of the ideal body and other cultural influences. Surprisingly, despite the almost exclusive media preference for very young female bodies, she finds that older women are not less satisfied with their bodies than younger women. Written for readers from a variety of disciplines, this clear and eclectic book will make the ideal text for students from psychology, sociology, gender and media studies.

Abstract: For a large number of companies from different countries, the authors analyze how company corporate governance practices and country regulatory regimes interact in terms of company valuation. They confirm that corporate governance plays a crucial role in efficient company monitoring and shareholder protection, and consequently positively impacts valuation. They find substitution in valuation impact between corporate governance measures at the company and country level, with a possibility of over-regulation. Corporate governance appears more valuable for companies that rely heavily on external financing, consistent with the hypothesis that the main role of corporate governance is to protect external financiers.
