It will not waste your time. allow me, the e-book will enormously manner you new issue to read. Just invest tiny times to admittance this on-line proclamation **Jquery Documentation** as without difficulty as evaluation them wherever you are now.

Download *jQuery / jQuery*
Experienced developers sometimes use the shorthand `$()` for `$(document`

`).ready()`. If you are writing code that people who aren't experienced with jQuery may see, it's best to use the long form.
`jQuery() | jQuery API Documentation`
`jQuery: The Write Less, Do More, JavaScript Library.`
`Ajax. Call a local script on the server`
`/api/getWeather`

with the query parameter `zipcode=97201` and replace the element `#weather-temp's html` with the returned text.
`Autocomplete / jQuery UI`
As of jQuery 1.9.0 (and unless using the jQuery Migrate plugin), `jQuery()`

requires the HTML string to start with a < (i.e text nodes cannot appear at the front of the HTML string). As of jQuery 1.4, the second argument to `jQuery()` can accept a plain object consisting of a superset of the properties that can be passed to the `.attr()` method.

The jQuery UI Datepicker is a highly configurable plugin that adds datepicker functionality to your pages. You can customize the date

format and language, restrict the selectable date ranges and add in buttons and other navigation options easily.

[Events | jQuery Learning Center](#)

This method is a shortcut for `.on("click", handler)` in the first two

variations, and `.trigger("click")` in the third. The click event is sent to an element when the mouse pointer is over the element, and the mouse button is pressed and released. Any HTML element can receive this event. For example, consider the HTML:

Documentation

If the effect property contains the name of a jQuery method, then that method will be used; otherwise it is assumed to be the name of a jQuery UI effect. When using a jQuery UI effect that supports additional settings, you may include those settings in the object and they will be passed to the effect.
