You have been predicted—by companies, governments, law enforcement, hospitals, and universities. Their computers say, "I knew you were going to do that!" These institutions are seizing upon the power to predict whether you're going to click, buy, lie, or die. Why? For good reason: predicting human behavior combats financial risk, fortifies healthcare, conquers spam, toughens crime fighting, and boosts sales. How? Prediction is powered by the world's most potent, booming unnatural resource: data. Accumulated in large part as the by-product of routine tasks, data is the unsalted, flavorless residue deposited en masse as organizations churn away. Surprise! This heap of refuse is a gold mine. Big data embodies an extraordinary wealth of experience from which to learn. Predictive analytics unleashes the power of data. With this technology, the computer literally learns from data how to predict the future behavior of individuals. Perfect prediction is not possible, but putting odds on the future—lifting a bit of the fog off our hazy view of tomorrow—means pay dirt. In this rich, entertaining primer, former Columbia University professor and Predictive Analytics World founder Eric Siegel reveals the power and perils of prediction: What type of mortgage behavior Chase Bank predicted Predicting which people will drop out of school, cancel a subscription, or get divorced before they are even aware of it themselves Why early retirement decreases life expectancy and vegetarians miss fewer flights Five reasons why organizations predict death How U.S. Bank and Obama's 2012 campaign calculated the way to most strongly influence each individual How IBM's Watson computer beat the human champs on TV's Jeopardy! How Target figures out you're pregnant and Hewlett-Packard deduces you're about to quit your job How judges and parole boards rely on crime-predicting computers to decide who stays in prison and who goes free What's predicted by Citibank, Facebook, Ford, Google,

IBM, the IRS, Match.com, Pfizer, and Wikipedia A truly omnipresent science, predictive analytics affects everyone, every day. Although largely unseen, it drives millions of decisions, determining whom to call, mail, investigate, incarcerate, set up on a date, or medicate. Whether you are a consumer of it—or consumed by it—get a handle on the power of Predictive Analytics.

A beginners guide to Java programming for web development
KEY FEATURES Learn one of the most in-demand skills in the field of application development.

Get familiar with the fundamental concepts required to develop a web app. Understand how to develop web apps both with and without using a framework.
DESCRIPTION Java is a popular language for developing web applications due to its stability, scalability, and robustness. This comprehensive guide will teach you how to develop web apps using Java. The book will help you learn how to establish a JDBC Connection in Java, develop Model-View-Controller (MVC) apps using JSP and servlets without a framework, and understand the application and use of JavaServer Faces (JSF) over JSP to effectively develop web apps. Additionally, the book will help you gain a thorough understanding of different

types of frameworks and explore the Spring framework in-depth. It will also teach you how to leverage the power of Spring to simplify and streamline your web development projects. Lastly, the book will help you get familiar with the concept of Aspect Oriented Programming (AOP) and learn how to apply AOP in your Java web development projects. By the end of the book, you will be able to build professional-quality web applications using Java. **WHAT YOU WILL LEARN** Learn how to create web apps using Java Servlets. Explore advanced features that can be managed using servlets. Get familiar with the MVC Architecture in Java. Build component-based and event-oriented web interfaces using Java Server Faces (JSF). Learn how to work with web services SOAP and RESTful API. **WHO THIS BOOK IS FOR** This book is for beginners who are looking to build web apps using Java. It is also for students pursuing a Master's degree in Computer Applications or Information Technology. Having a basic understanding of core Java, HTML, and relational databases will be an added advantage. **TABLE OF CONTENTS**
1. Database Connectivity From Java 2. Performing Insert, Update, Delete and Select Operations 3. Creating Properties File and Performing Batch Operations 4. Web Components and Web Application Directory Structure 5. Servlet Programming 6. Managing Advance Features in Servlet 7. Basics of Java Server Pages (JSP) 8. Handling Beans and Using Expression Language 9. Understand Model, View and Controller Pattern 10. Overview of JSP Standard Tag Library (JSTL) 11. Outline of JSF for Building Component-Based, Event-Oriented Web Interfaces 12. Working with Web Services (SOAP and RESTful) 13. Aspect-Oriented Approach with Spring Framework 14. Introduction to Spring Boot
Web Development Toolkit for Java Developers Prentice Hall

JavaServer Pages (JSP) are a popular way to deliver dynamic content to otherwise static HTML pages. JSPs are executed on Web servers and are used to generate interactive, viewer specific information. This title provides a learning tool for entry level programmers.

Learning environment research has undergone considerable growth in the past thirty years and has now reached a stage of notable diversity and internationalization. Earlier studies often used questionnaires to assess learning environments, but today both qualitative and quantitative approaches are used. Many contemporary studies are a productive combination of these two approaches. This volume brings together prominent educators and researchers from around the world to share their contemporary research on educational learning environments. The chapters provide information on recent trends and developments and effective applications of different methods to improve teaching and learning. The book will be a critical and specialized source that describes recent advances in learning environment studies across all continents. The contributors come from Australia, Belgium, Cyprus, Finland, India, Indonesia, Israel, Japan, The Netherlands, New Zealand, Singapore, Turkey, Taiwan, Thailand, and the USA.

Contemporary Approaches To Research On Learning Environments: Worldviews IGI Global

David de Vaus' classic text Surveys in Social Research provides clear advice on how to plan, conduct and analyse social surveys. It emphasises the links between theory and research, the logic and interpretation of statistics and the practices of social research. This sixth edition has been completely revised and updated, and contains new examples, data and extensive lists of web resources. As well as explaining how to conduct good surveys, de Vaus shows how to become a critical consumer of research. He argues that the logic of surveys and statistics is simply an extension of the logic we use in everyday life; analysis, however, requires creativity and imagination rather than the application of sterile mechanical procedures. The prime goal of research should be to gain accurate understanding and, as a researcher, use methods and techniques which enhance understanding. De Vaus advocates researchers use the method, rather than letting the method use you. Surveys in Social Research is essential reading for students and researchers working with surveys. It assumes no background in statistical analysis, and gives you the tools you need to come to grips with this often challenging field of work.
