The idea that mathematics is reducible to logic has a long history, but it was Frege who

gave logicism an articulation and defense that transformed it into a distinctive philosophical thesis with a profound influence on the development of philosophy in the twentieth century. This volume of classic, revised and newly written essays by William Demopoulos examines logicism's principal legacy for philosophy: its elaboration of notions of analysis and reconstruction. The essays reflect on the deployment of these ideas by the principal figures in the history of the subject - Frege, Russell, Ramsey and Carnap - and in doing so illuminate current concerns about the nature of mathematical and theoretical knowledge. Issues addressed include the nature of arithmetical knowledge in the light of Frege's theorem; the status of realism about the theoretical entities of physics; and the proper interpretation of empirical theories that postulate abstract structural constraints. This "captivating biography" of the great Roman general "puts Caesar's war exploits on full display, along with his literary genius" and more (The New York Times) Tracing the extraordinary trajectory of the Julius Caesar's life, Adrian Goldsworthy not only chronicles his accomplishments as charismatic orator, conquering general, and powerful dictator but also lesser-known chapters during which he was high priest of an exotic cult and captive of pirates, and rebel condemned by his own country. Goldsworthy also reveals much about Caesar's

intimate life, as husband and father, and as seducer not only of Cleopatra but also of the wives of his two main political rivals. This landmark biography examines Caesar in all of these roles and places its subject firmly within the context of Roman society in the first century B.C.

Goldsworthy realizes the full complexity of Caesar's character and shows why his political and military leadership continues to resonate thousands of years later.

The launching of Sputnik in 1957 sparked an education movement that stressed the importance of curricular rigor and standardization as a means to improve education and bolster national defense. Within six months of Sputnik's launch, Congress passed the National Defense Education Act (NDEA) that approved an unprecedented amount of federal funding toward the math, science, and foreign language disciplines. The teaching of English was left out and through the leadership of the National Council of Teachers of English (NCTE), the discipline maneuvered public relations and political connections in its quest to acquire federal funds. In doing so, the NCTE mimicked strategies that galvanized funding for math, science, and foreign language disciplines by arguing the importance of the teaching of English for national security and advocating for a teaching model that aligned with Cold War Era pedagogical trends. These tactics marked a major shift in how the NCTE advocated for the teaching of English. In the early twentieth century, the organization embraced student-centered education practices connected to the ideas of progressive educators. This perspective continued with the creation

and expansion of life adjustment education during the 1930s and 40s. During this era, many NCTE authors recommended this movement that advocated connecting education to future adult experiences. Following Sputnik, NCTE leaders supported content-centered reforms. Instead of curriculum recommendations based in discovering and fostering relevant student experiences, the NCTE's focus became adjusting student learning to predefined skills it thought all students should possess. This trend was supported by conceptions of Cold War education models, including those advocated by their rival English organization, the Modern Language Association (MLA). The MLA had successfully worked with federal actors in attaining funding for foreign language training institutes and the NCTE's collaboration with the MLA represented a shift in adopting ideas it was previously opposed to promoting. Despite their efforts, the NCTE was not a part of NDEA reauthorization in 1961 the federal government, led by U.S. Commissioner of Education, Sterling McMurrin, funded teacher-training institutes for the study of English through a program called "Project English." The 1960s continued with the NCTE

representing stronger content-centered ideas before shifting in less than a decade as indicated by the materials produced by the 1966 AngloAmerican Conference on English at Dartmouth. Here, NCTE leaders reassessed their beliefs after meeting with British educators who advocated student-centered curriculum models and reintroduced benefits of experiential education. These ideas would manifest into student-centered curriculum models during the late 1960s and 1970s. *Journal of Education* John Wiley & Sons

After defeating enemies in battle, Roman citizens celebrate in the streets as Julius Caesar and his entourage make their way through the city. As Caesar passes a soothsayer, he receives an ominous warning: “Beware the ides of March,” which he immediately disregards. Meanwhile, some of his closest followers are convinced their leader has become too powerful and plot his removal. Plutarch’s *Lives of the Noble Grecians and Romans* was Shakespeare’s primary source for Julius Caesar. This

This book studies small but highly captivating artworks from antiquity – engraved gemstones. These objects had multiple applications, and the images upon them captured snapshots of people’s beliefs, ideologies, and everyday occupations. They provide a unique perspective on the propaganda of Roman political leaders, especially Octavian/Augustus. The Plight of Rome in the Fifth Century AD argues that the fall of the western Roman Empire was rooted in a significant drop in war booty, agricultural productivity, and mineral resources. Merrony proposes that a dependency on the three economic components was established with the Principate, when a precedent was set for an unsustainable threshold on military spending. Drawing on literary and archaeological data, this volume establishes a correspondence between booty (in the form of slaves and precious metals) from foreign campaigns and public

building programmes, and how this equilibrium was upset after the Empire reached its full expansion and began to contract in the third century. It is contended that this trend was exacerbated by the systematic loss of agricultural productivity (principally grain, but also livestock), as successive barbarian tribes were settled and wrested control from the imperial authorities in the fifth century. Merrony explores how Rome was weakened and divided, unable to pay its army, feed its people, or support the imperial bureaucracy – and how this contributed to its administrative collapse.

Chris L. Firestone and
Nathan Jacobs integrate
and interpret the work
of leading Kant
scholars to come to a
new and deeper
understanding of Kant's
difficult book, *Religion
within the Boundaries
of Mere Reason*. In this
text, Kant's vocabulary
and language are
especially tortured and
convoluted. Readers
have often lost sight of
the thinker's deep ties
to Christianity and
questioned the viability
of the work as serious
philosophy of religion.
Firestone and Jacobs
provide strong and
cogent grounds for
taking Kant's religion
seriously and defend
him against the charges
of incoherence. In their
reading, Christian
essentials are
incorporated into the
confines of reason, and
they argue that Kant
establishes a rational
religious faith in accord
with religious
conviction as it is
elaborated in his

mature philosophy. For
readers at all levels,
this book articulates a
way to ground religion

fledged defense of
Religion which is linked
to the larger corpus of
Kant's philosophical
enterprise.
