The extraordinary life and ideas of one of the greatest—and most neglected—minds in history. Sir Thomas Browne (1605–1682) was an English writer, physician, and philosopher whose work has inspired everyone from Ralph Waldo Emerson to

Jorge Luis Borges, Virginia Woolf to Stephen Jay Gould. In an intellectual adventure like Sarah Bakewell's book about Montaigne, *How to Live*, Hugh Aldersey-Williams sets off not just to tell the story of Browne's life but to champion his skeptical nature and inquiring mind. Mixing botany, etymology, medicine, and literary history, Aldersey-Williams journeys in his hero's footsteps to introduce us to

witches, zealots, natural wonders, and fabulous creatures of Browne's time and ours. We meet Browne the master prose stylist, responsible for introducing hundreds of words into English, including electricity, hallucination, and suicide. Aldersey-Williams reveals how Browne's pr

When a certain Mark Anthony of the famous Italian family of the Roveres arrived in Agen, in SW France, in the second decade of the 16th century, he brought along with him his personal physician, Master Julius Caesar, who had been under the protection of his family for some time. This latter was a majestic-looking man of some 40 years of age who was to become renowned as one of the greatest scholars of the Renaissance. Indeed, so great became his fame

in all branches of learning that it was for long considered that he was the greatest scholar who had ever dwelt in France. This study provides all the important things known about the life of Julius Caesar Scaliger (1484-1558). **When That Rough God Goes Riding** Bloomsbury Publishing Puzzle Packs include a unit word list (characters names, symbols, etc.) and a vocabulary word list with definitions. There are 4 crosswords, 4 word searches,

4 matching, 4 fill in the blank, 4 magic squares, 32 bingo cards for the unit words. All of the above plus 4 vocabulary juggle letter worksheets and flash cards for the vocabulary words.

higher in Britain. The last few decades have seen striking and nearly continuous falls in the amount of time individuals spend with books and other printed material. And, perhaps as a result, the average level of literacy in the British and US populations is declining: our ability to comprehend complex writing, long words or sophisticated expressions is less than it was a few decades ago. Very surprisingly, the rate of decline is fastest amongst the best educated segment of the population. Chris

Goodall's readable and comprehensive book asks why this is happening. 'In an ever more demanding world' he inquires 'why is our ability to understand and use the written word in gradual but apparently relentless retreat?' Chris Goodall's *The Future of the Word: Technology, culture and the slow erosion of literacy* examines the striking but largely unnoticed evidence from around the world. Using the latest research results from neuroscientists, from academics

who work on reading skills and from cultural analysts, Goodall brings his commitment to scrupulous research to demonstrate how modern society is making it almost impossible for people to engage in deep reading. Not only are people reading less but they now consume the written word in a more cursory and less reflective way. The author has lost control of the reader: we all tend to skip across the page, searching exclusively for what is relevant to us rather than

---

trying to understand the writer's point of view or memorise her arguments. There is a strong tendency to say that this doesn't matter. We longer need to read and to learn because all the information that we could possibly need is instantaneously available to us through electronic gadgets. The argument of Goodall's book is that this complacency is mistaken. Reading deeply helps us develop a framework and an intellectual structure to which we can add new ideas or opinions.

The internet gives us orphaned facts but the reading of books or long articles gives us understanding. As importantly, deep reading trains our brains to cope with complex ideas, much as an athlete trains his muscles with repeated exercise. Goodall discusses the convincing scientific evidence that truly proficient literacy, a skill which is in sharp decline, helps improve other cognitive capabilities and may even improve IQ. If we don't go to the literacy gym often enough, he says, our intellectual

capabilities suffer. Chris Goodall is a well known writer on climate change and energy, winning awards for his previous books and he is a regular commentator on scientific issues in newspapers in the UK and abroad. In an earlier part of his career he worked in television and other mass media. This book comes out of his fascination with how electronic technologies are affecting the way we think and live. 'Although the digital revolution has made life easier and has improved many of our cognitive

---

skills', he says 'it is reversing our ability to read and to comprehend complex ideas'. Full of engaging reports of cutting-edge science, surprising and informative analysis and written with clarity and pace, Chris Goodall's *The Future of the Word* is the first attempt to bring rigour to questions that many of us worry about it: why do we find it more difficult to concentrate on the written word? And what can we do about it?

Romans is a lively and informative introduction to ancient Rome. Making extensive use of ancient sources and copiously illustrated with photographs, drawings, maps and plans, now for the first time in colour, its opening two chapters guide the reader through the events of Roman history, from the foundation of the city to the fall of the empire. Subsequent chapters introduce the most important aspects of the Roman world: the army and the provinces, religion, society, and entertainment; the final two chapters focus on Pompeii and Herculaneum, the two cities destroyed by

Vesuvius. New to this edition are sections on the Augustan principate, on the Roman army, on life in the provinces and on engineering innovations, while the existing text is revised throughout. The narrative includes descriptions of many individuals from the Roman world, drawn from a variety of social settings. Activity boxes and further reading lists throughout each chapter aid students' understanding of the subject. Review questions challenge students to read further and reflect on some of the most important social, political and cultural issues of

---

ancient Rome, as well as to compare them with those of their own society. The new edition is supported by a website that includes images, maps and timelines, further reading and related links.

Following on from the widely acclaimed *The Actor and the Text* - which was addressed directly to the actor - *Text in Action* is drawn from Cicely's group work experiences, encompassing the viewpoint of the director as well. To begin with, the author explores language from a

cultural and personal perspective. In these days of management jargon and internet technology are we losing touch with the ability to communicate fully?' Is the deeper imaginative world being left unexpressed? The main body of the book contains detailed, practical exercises for actors and directors during the rehearsal process. All exercises will be tied to specific scenes, leading to a fuller exploration of the text. *Text In Action* analyses the imagery of

plays, speech structures, the physicality of language and emphasises the importance of finding a collective voice. Cicely's guidance on the matter of voice will help actors find relationships and situations through the text in a unique way, in order to make it more dynamic and creative.
