This book explores the relationship between populism or populist regimes and constitutional interpretation used in those regimes. The volume discusses the question of whether contemporary populist governments and movements have developed, or encouraged new and specific constitutional theories, doctrines and methods of interpretation, or whether their constitutional and other high courts continue to use the old, traditional interpretative tools in constitutional adjudication. The book is divided into four parts. Part I contains three chapters elaborating the theoretical basis for the discussion. Part II examines the topic

from a comparative perspective, representing those European countries where populism is most prevalent, including Austria, Croatia, the Czech Republic, Greece, Hungary, Italy, Poland, Romania, Spain, and the United Kingdom. Part III extends the focus to the United States, reflecting how American jurisprudence and academia have produced the most important contributions to the theory of constitutional interpretation, and how recent political developments in that country might challenge the traditional understanding of judicial review. This section also includes a general overview on Latin America, where there are also some populist governments and strong populist movements. Finally, the editors' closing study analyses the outcomes of the comparative research, summarizing the conclusions of the book. Written by renowned national constitutional scholars, the book will be essential reading for students, academics and researchers working in Constitutional Law and Politics.

Wherever people are working, there is some type of stress—and where there is stress, there is the risk of burnout. It is widespread, the subject of numerous studies in the U.S. and abroad. It is also costly, both to individuals in the form of sick days, lost wages, and emotional exhaustion, and to the

workplace in terms of the bottom line. But as we are now beginning to understand, burnout is also preventable. Burnout for Experts brings multifaceted analysis to a multilayered problem, offering comprehensive discussion of contributing factors, classic and less widely perceived markers of burnout, coping strategies, and treatment methods. International perspectives consider phase models of burnout and differentiate between burnout and related physical and mental health conditions. By focusing on specific job and life variables including workplace culture and gender aspects, contributors give professionals ample means for recognizing burnout as well as its warning signs. Chapters on prevention and intervention detail effective programs that can be implemented at the individual and organizational levels. Included in the coverage: · History of burnout: a phenomenon. · Personal and external factors contributing to burnout. · Depression and burnout · Assessment tools and methods. · The role of communication in burnout prevention. · Active coping and other intervention strategies. Skillfully balancing scholarship and accessibility, Burnout for Experts is a go-to resource for health psychologists, social workers, psychiatrists, and organizational, industrial, and clinical psychologists.

Competition authorities are increasingly interested in understanding the impact of their activities on markets and consumers. The goal is to improve competition policy rules and decision-making practices and to get robust evidence on the benefits of competition and competition policy for society as a whole. Discussions with competition authorities, practitioners and academics have shown the need to take stock of the experience gained in this field by the European Commission and to present it in an easily accessible way. The studies collected in this volume – prepared by senior Commission officials and competition policy experts – range from the ex post evaluation of specific policy interventions to the assessment of the broader impact of competition policy. The issues and topics examined include the following: objectives and scope of evaluations by the European Commission; description of counterfactual evaluation techniques used; conditions for a successful ex post evaluation of a competition policy intervention; a wide selection of individual cases covering a variety of economic sectors; applications in merger control, antitrust and State aid; direct benefits of

competition policy interventions for consumers; deterrent effects of such interventions on market participants; and macroeconomic outcomes in terms of job creation, productivity and GDP growth. This matchless book assembles within a single volume all that is needed for competition policy analysts and practitioners to undertake ex post economic evaluations. While its collection of state-of-the-art ex post evaluation studies has a clear value for competition authorities, it is sure to be welcomed as well by competition law practitioners in the private sector, who will greatly appreciate the effort made to cast a critical eye on decisions taken in the past. Moreover, it allows for addressing some of the new challenges facing competition policymakers. Fabienne Ilzkovitz is Principal Advisor responsible for the economic evaluation of competition policy within the Directorate-General for Competition of the European Commission, and since 2014, she has coordinated various ex post evaluation projects in the Directorate-General. She is also Associate Professor of Economics in the Solvay Brussels School of Economics and Management at the Université Libre de Bruxelles, Belgium. Adriaan Dierx is Senior Expert on ex post economic evaluation within the Directorate-General for Competition of the European Commission. He has managed a number of studies aimed at assessing the economic impact of the European Commission's competition policy interventions.

The Social Determinants of Mental Health aims to fill the gap that exists in the psychiatric, scholarly, and policy-related literature on the social determinants of mental health: those factors stemming from where we learn, play, live, work, and age that impact our overall mental health and well-being. The editors

and an impressive roster of chapter authors from diverse scholarly backgrounds provide detailed information on topics such as discrimination and social exclusion; adverse early life experiences; poor education; unemployment, underemployment, and job insecurity; income inequality, poverty, and neighborhood deprivation; food insecurity; poor housing quality and housing instability; adverse features of the built environment; and poor access to mental health care. This thought-provoking book offers many beneficial features for clinicians and public health professionals: Clinical vignettes are included, designed to make the content accessible to readers who are primarily clinicians and also to demonstrate the practical, individual-level applicability of the subject matter for those who typically work at the public health, population, and/or policy level. Policy implications are discussed throughout, designed to make the content accessible to readers who work primarily at the public health or population level and also to demonstrate the policy relevance of the subject matter for those who typically work at the clinical level. All chapters include five to six key points that focus on the most important content, helping to both prepare the reader with a brief overview of the chapter's main points and reinforce the "take-away" messages afterward. In addition to the main body of the book, which focuses on selected individual social determinants of mental health, the volume includes an in-depth overview that summarizes the editors' and their colleagues' conceptualization, as well as a final chapter coauthored by Dr. David Satcher, 16th Surgeon General of the United States, that serves as a "Call to Action," offering specific actions that can be taken by both clinicians and policymakers to address the social determinants of mental health. The editors have succeeded in the difficult task of

balancing the individual/clinical/patient perspective and the population/public health/community point of view, while underscoring the need for both groups to work in a unified way to address the inequities in twenty-first century America. The *Social Determinants of Mental Health* gives readers the tools to understand and act to improve mental health and reduce risk for mental illnesses for individuals and communities. Students preparing for the Medical College Admission Test (MCAT) will also benefit from this book, as the MCAT in 2015 will test applicants' knowledge of social determinants of health. The social determinants of mental health are not distinct from the social determinants of physical health, although they deserve special emphasis given the prevalence and burden of poor mental health.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be

particularly susceptible, and to assessing the potential risks of tobacco products.

The Atmosphere and Climate of Mars James Currey Publishers
The extraordinary, groundbreaking novel from Laurie Halse Anderson, with more than 2.5 million copies sold! The first ten lies they tell you in high school. "Speak up for yourself--we want to know what you have to say." From the first moment of her freshman year at Merryweather High, Melinda knows this is a big fat lie, part of the nonsense of high school. She is friendless, outcast, because she busted an end-of-summer party by calling the cops, so now nobody will talk to her, let alone listen to her. As time passes, she becomes increasingly isolated and practically stops talking altogether. Only her art class offers any solace, and it is through her work on an art project that she is finally able to face what really happened at that terrible party: she was raped by an upperclassman, a guy who still attends Merryweather and is still a threat to her. Her healing process has just begun when she has another violent encounter with him. But this time Melinda fights back, refuses to be silent, and thereby achieves a measure of vindication. In Laurie Halse Anderson's powerful novel, an utterly believable heroine with a bitterly ironic voice delivers a blow to the hypocritical world of high school. She speaks for many a disenfranchised teenager while demonstrating the importance of speaking up for oneself. *Speak* was a 1999 National Book Award Finalist for Young People's Literature.

The Financial Services (Banking Reform) Bill aims to establish a more resilient, stable and competitive banking sector; to reduce the severity of a future financial crisis; and to protect taxpayers in the event of such a crisis. It is primarily an enabling Bill, which provides HM Treasury with the requisite powers to implement the policy underlying the Bill through secondary legislation.

Three illustrative draft instruments were published in March 2013 in order to aid Parliamentary scrutiny of the Bill, and the Government has continued to develop those instruments. This paper invites comments on a further four statutory instruments: Ring-fenced Bodies and Core Activities Order; Excluded Activities and Prohibitions Order; Banking reform (Loss Absorbency Requirement) Order; and the Fees and Prescribed International Organisations Regulations. Further secondary legislation is planned for pensions and building societies.

Organizing Corporate and Other Business Enterprises is a one-volume treatise detailing the various aspects of setting up small business enterprises. Among the business entities discussed are individual proprietorships, general and limited partnerships,

closely held corporations, not-for-profit corporations, and limited liability companies. Tax, financing, and management considerations are reviewed. The publication covers much more than the title indicates--it deals not just with organizing business enterprises but also with selected, tangential problem areas--e.g., fiduciary obligations of officers and directors, managing risk, employee benefits, etc. This publication is a practice guide to legal and tax factors to be considered in selecting a form of business organization. It is intended for the attorney who is advising proposed or existing small businesses. Organizing Corporate and Other Business Enterprises provides assistance from the inception of an enterprise through the death of the owners or the termination of the enterprise. Coverage includes: strong federal tax analysis, which is especially important for choice of entity classification, including S corporations; corporate domicile; promoter's rights; and initial capitalization. • Updated annually. • First published in 1949. • Revised Sixth Edition published in 1998.

This book contains the extended and revised versions of selected papers from the Third International Symposium on Business Modeling and Software Design (BMSD 2013), held in Noordwijkerhout, The Netherlands, during July 8-10, 2013. The symposium was organized and sponsored by the Interdisciplinary Institute for Collaboration and Research on Enterprise Systems and Technology (IICREST), in cooperation with the Dutch Research School for Information and Knowledge Systems (SIKS), the Center for Telematics and Information Technology (CTIT), Aristotle University of Thessaloniki (AUTH), and AMAKOTA Ltd. The theme of BMSD 2013 was "Enterprise Engineering and Software Generation." The 13 full and 20 short papers presented at BMSD 2013 were selected from 56 submissions. The eight papers published in this book were carefully reviewed and selected from the 13 full papers. The selection includes papers touching upon a large number of research topics, ranging from more conceptual ones, such as modeling landscapes, process modeling, declarative business rules, and normalized systems to more practical ones, such as business-case development and performance indicators, and from more business-related topics, such as value modeling and service systems, to topics related to information architectures.

The world's most trusted guide for leaders in transition Transitions are a critical time for leaders. In fact, most agree that moving into a new role is the biggest challenge a manager will face. While transitions offer a chance to start fresh and make needed changes in an organization, they also place leaders in a position of acute vulnerability. Missteps made during the crucial first three months in a new role can jeopardize or even derail your success. In this updated and expanded version of the international bestseller *The First 90 Days*, Michael D. Watkins offers proven strategies for conquering the challenges of transitions—no matter where you are in your career. Watkins, a noted expert on leadership transitions and adviser to senior leaders in all types of organizations, also addresses today's increasingly demanding professional landscape, where managers face not only more frequent transitions but also steeper expectations once they step into their new jobs. By walking you through every aspect of the transition scenario, Watkins identifies the most common pitfalls new leaders encounter and provides the tools and strategies you need to avoid them. You'll learn how to secure critical early wins, an important first step in establishing yourself in your new role. Each chapter also includes checklists, practical tools, and self-assessments to help you assimilate key lessons and apply them to your own situation. Whether you're starting a new job, being promoted from within, embarking on an overseas

assignment, or being tapped as CEO, how you manage your transition will determine whether you succeed or fail. Use this book as your trusted guide.

Humanity has long been fascinated by the planet Mars.

Was its climate ever conducive to life? What is the

atmosphere like today and why did it change so

dramatically over time? Eleven spacecraft have successfully

flown to Mars since the Viking mission of the 1970s and

early 1980s. These orbiters, landers and rovers have

generated vast amounts of data that now span a Martian

decade (roughly eighteen years). This new volume brings

together the many new ideas about the atmosphere and

climate system that have emerged, including the complex

interplay of the volatile and dust cycles, the atmosphere-

surface interactions that connect them over time, and the

diversity of the planet's environment and its complex

history. Including tutorials and explanations of complicated

ideas, students, researchers and non-specialists alike are

able to use this resource to gain a thorough and up-to-date

understanding of this most Earth-like of planetary

neighbours.

After his definitive *The Historical Jesus*, John Dominic Crossan

delivered *Jesus: A Revolutionary Biography*--a popularized,

bestselling account of what we can know about the life of Jesus.

Here he offers the core of his life's work--a concise and

astonishing presentation of the authentic teachings and earliest

images of the revolutionary Galilean sage. Crossan's fresh

translations of Jesus' sayings show Jesus to be a teacher whose

radical message that all are equal before God is as timely today

as it was two thousand years ago. This picture is dramatically

confirmed by the preConstantinian, Christian renderings of

Jesus, which show that he was remembered by the first

Christians not as God but as a revolutionary healer and leader.

This major source of Chinese mythology (third century BC

to second century AD) contains a treasure trove of rare data

and colorful fiction about the mythical figures, rituals,

medicine, natural history, and ethnic peoples of the ancient

world. *The Classic of Mountains and Seas* explores 204

mythical figures such as the gods Foremost, Fond Care,

and Yellow, and goddesses Queen Mother of the West and

Girl Lovely, as well as many other figures unknown outside this text. This eclectic Classic also contains crucial information on early medicine (with cures for impotence and infertility), omens to avert catastrophe, and rites of sacrifice, and familiar and unidentified plants and animals. It offers a guided tour of the known world in antiquity, moving outwards from the famous mountains of central China to the lands “beyond the seas.” Translated with an introduction and notes by Anne Birrell.
