Black British History Springer
This book is a guide to asset and risk management from a practical point of view. It is centered around two questions triggered by the global events on the stock markets since the middle of the last decade: - Why do crashes happen when in theory they should not? - How do investors deal with such crises in terms of their risk measurement and management and as a consequence, what are the implications for the chosen investment strategies? The book presents and discusses two

different approaches to finance and investing, i.e., modern portfolio theory and behavioral finance, and provides an overview of stock market anomalies and historical crashes. It is intended to serve as a comprehensive introduction to asset and risk management for bachelor's and master's students in this field as well as for young professionals in the asset management industry. A key part of this book is the exercises to further demonstrate the concepts presented with examples and a step-by-step business case. An Excel file with the calculations and solutions for all 17 examples as well as all business case calculations can be downloaded at extras.springer.com.

The Kingdom of Saudi Arabia has established itself as the twelfth-largest economy in the world, the largest West Asian economic power, world's largest oil producer, and a strong and capable force in international politics, particularly in the Sunni Islamic world. However, at present it is at crossroads. Should it continue as a 'kingdom' or usher in the process of inclusive political representation? This volume answers such questions and explores how the state is coping with domestic, regional and global developments to remain relevant in the changing times. It provides a holistic

overview of a slew of economic, political, cultural, military and security policy measures that have been initiated by the government. The work also offers a detailed analysis of Saudi Arabia's relations with three significant powers — USA, China and India — and how they are evolving under new geopolitical and geostrategic dynamics. This book will interest strategists, policymakers, researchers and students of international relations, geopolitics, political science and political economy as well as the informed reader.

This volume examines mechanisms for regional peacemaking and conflict management in Europe and the Middle East. To date little research has been devoted to uncovering the conditions for peace, and the factors that contribute to stabilizing the state of peace. This volume assesses the factors that contribute to regional pacification, the incentives that motivate states in establishing peaceful relations, and most importantly, how regions become peaceful. It discusses the conditions under which various types of 'peace' might emerge on a regional level and the factors most likely to determine the outcome.

The book takes an innovative approach through a systematic comparison of two regions that are particularly prominent and important for the subject of regional pacification: Europe and the Middle East. While many believe that the European case is the indispensable model for peacemaking, others believe that these two regions are

too different for Europe to be a useful framework for the Middle East. This volume occupies a middle ground between these two extreme positions. It argues that while a mindless copying of European models will not lead to peace in the Middle East, important insights can be gained from the most successful case of regional peacemaking to date. This work will be of much interest to students of regional security, peacemaking, conflict management, Middle East politics, European security and IR in general.

This book analyses the Syria crisis and the role of chemical weapons in relation to US foreign policy. The Syrian government's use of such weapons and their subsequent elimination has dominated the US response to the conflict, where these are viewed as particularly horrific arms - a repulsion known as the chemical taboo. On the surface, this would seem to be an appropriate reaction: these are nasty weapons and eradicating them would ostensibly comprise a 'good' move. But this book reveals two new aspects of the taboo that challenge this prevailing view. First, actors use the taboo strategically to advance their own self-interested policy objectives. Second, that applying the taboo to Syria has actually exacerbated the crisis. As such, this book not only provides a

timely analysis of Syria, but also a major and original rethink of the chemical taboo, as well as international norms more widely.

International efforts to prevent the spread of weapons of mass destruction (WMD)—including nuclear, biological, and chemical weapons—rest upon foundations provided by global treaties such as the Nuclear Non-Proliferation Treaty (NPT) and the Chemical Weapons Convention (CWC). Over time, however, states have created a number of other mechanisms for organizing international cooperation to promote nonproliferation. Examples range from regional efforts to various worldwide export-control regimes and nuclear security summit meetings initiated by U.S. president Barack Obama. Many of these additional nonproliferation arrangements are less formal and have fewer members than the global treaties. International Cooperation on WMD Nonproliferation calls attention to

the emergence of international cooperation beyond the core global nonproliferation treaties. The contributors examine why these other cooperative nonproliferation mechanisms have emerged, assess their effectiveness, and ask how well the different pieces of the global nonproliferation regime complex fit together. Collectively, the essayists show that states have added new forms of international cooperation to combat WMD proliferation for multiple reasons, including the need to address new problems and the entrepreneurial activities of key state leaders. Despite the complications created by the existence of so many different cooperative arrangements, this collection shows the world is witnessing a process of building cooperation that is leading to greater levels of activity in support of norms against WMD and terrorism.

Our changing climate and more extreme weather events have dramatically increased the number and severity of floods across the world. Demonstrating the diversity of global flood risk management

(FRM), this volume covers a range of topics including planning and policy, risk governance and communication, forecasting and warning, and economics. Through short case studies, the range of international examples from North America, Europe, Asia and Africa provide analysis of FRM efforts, processes and issues from human, governance and policy implementation perspectives.

Written by an international set of authors, this collection of chapters and case studies will allow the reader to see how floods and flood risk management is experienced in different regions of the world. The way in which institutions manage flood risk is discussed, introducing the notions of realities and social constructions when it comes to risk management. The book will be of great interest to students and professionals of flood, coastal, river and natural hazard management, as well as risk analysis and insurance, demonstrating multiple academic frameworks of analysis and their utility and drawbacks when applied to real-life FRM contexts.

Applied Asset and Risk Management Routledge

This book provides an analysis of the forms and functions of Holocaust memorialisation in human rights museums by asking about the impact of global memory politics on how we imagine the present and the future. It compares three human rights museums and their respective emplotment of the Holocaust and seeks to illuminate how, in this

specific setting, memory politics simultaneously function as future politics because they delineate a normative ideal of the citizen-subject, its set of values and aspirations for the future: that of the historically aware human rights advocate. More than an ethical practice, engaging with the Holocaust is used as a means of asserting one's standing on "the right side of history"; the memorialisation of the Holocaust has thus become a means of governmentality, a way of governing contemporary citizen-subjects. The linking of public memory of the Holocaust with the human rights project is often presented as highly beneficial for all members of what is often called the "global community". Yet this book argues that this specific constellation of memory also has the ability to function as an exercise of power, and thus runs the risk of reinforcing structural oppression. With its novel theoretical approach this book not only contributes to Memory Studies but also connects Holocaust memory to Studies of Global Governmentality and the debate on decolonising memory politics.

Government Contracting Routledge
Government contracting is one of the most important issues facing federal, state, and local governments. As governments contend with lower tax revenues and a growing belief that smaller government is better government, contracting has become a fundamental means of providing goods and services to citizens. This volume, which is geared toward practitioners as well as students, addresses the broad range of issues

that comprise government contracting – from the political, economic philosophy, and value of contracting – to the future of government contracting. Throughout the volume academic theory provides a foundation to address practical subjects, including the contract process, monitoring and evaluating contracts, ethics, and both federal and state local government contracting.

Contributors to this volume are both academicians and practitioners, who together offer their scholarly expertise and practical experience, encouraging readers to ask the very question "What is the role of government in American society?"

Through this approach, students will acquire the knowledge needed to understand the various aspects of government contracting, and practitioners will enhance their public procurement skills.

Government Contracting is ideally suited to MPA students, practitioners in the public sector, and elected officials looking to enhance their understanding of privatization and contracting in order to provide public services more effectively.

The use of financial concepts and tools to shape development is hardly new, but their recent adoption by advocates of sustainable environmental management has created opportunities for innovation in business and regulatory groups. The Handbook of Environmental and Sustainable Finance summarizes the latest

trends and attitudes in environmental finance, balancing empirical research with theory and applications. It captures the evolution of environmental finance from a niche scholarly field to a mainstream subdiscipline, and it provides glimpses of future directions for research. Covering implications from the Kyoto and Paris Protocols, it presents an intellectually cohesive examination of problems, opportunities, and metrics worldwide. Introduces the latest developments in environmental economics, sustainable accounting work, and environmental/sustainable finance

Drones and Targeted Killing Walter de Gruyter GmbH & Co KG
In a contemporary setting of increasing social division and marginalisation, **Policing Hate Crime** interrogates the complexities of

prejudice motivated crime and effective policing practices. Hate crime has become a barometer for contemporary police relations with vulnerable and marginalised communities. But how do police effectively lead conversations with such communities about problems arising from prejudice? Contemporary police are expected to be active agents in the pursuit of social justice and human rights by stamping out prejudice and group-based animosity. At the same time, police have been criticised in over-policing targeted communities as potential perpetrators, as well as under-policing these same communities as victims of crime. Despite this history, the demand for impartial law enforcement requires police to change their engagement with targeted communities and kindle trust as priorities in strengthening their response to hate crime. Drawing upon a research partnership between police and academics, this book entwines current law enforcement responses with key debates on the meaning of hate crime to explore the potential for misunderstandings of hate crime between police and communities, and illuminates ways to overcome communication difficulties. This book will be important reading for students taking courses in hate crime, as well as victimology, policing, and crime and community.

On issues pertaining to women and girls, Stephen Harper 's federal government positioned Canada as a " beacon of light " in the world. Programs were developed in relation to women 's maternal health and the protection of the girl child,

but other actions point to an ambiguous and even contradictory approach that failed to address gender inequality. In *Obligations and Omissions*, contributors examine Canada's equivocal – and diminished – role in working toward gender equality in the period between 2006 and 2015. Using a critical feminist lens to document, analyze, and challenge Canada's relations with the Global South, chapters explore the extent to which matters of gender equality have been erased or exploited under the Harper government and the factors that explain these policy shifts. While the contributors document successes in Canada's approach to some issues facing women and girls around the world, they also show many problems with the ways that agenda was framed and implemented under the Conservative government.. Drawing on rich theoretical investigation, empirical research, and discourse analysis, *Obligations and Omissions* reveals a complex picture of diverse practices, underscoring the implications of these actions for communities in the Global South, for Canada's image in the international community, and for future governments in the pursuit of a renewed gender equality strategy.
