### **Global Study on Homicide 2013** John Wiley & Sons

Our changing climate and more extreme weather events have dramatically increased the number and severity of floods across the world. Demonstrating the diversity of global flood risk management (FRM), this volume covers a range of topics including planning and policy, risk governance and communication, forecasting and warning, and economics. Through short case studies, the range of international examples from North America, Europe, Asia and Africa provide analysis of FRM efforts, processes and issues from human, governance

and policy implementation perspectives. Written by an international set of authors, this collection of chapters and case studies will allow the reader to see how floods and flood risk management is experienced in different regions of the world. The way in which institutions manage flood risk is discussed, introducing the notions of realities and social constructions when it comes to risk management. The book will be of great interest to students and professionals of flood, coastal, river and natural hazard management, as well as risk analysis and insurance, demonstrating multiple academic frameworks of analysis and their utility and drawbacks when applied to real-life FRM contexts.

This book analyses the Syria crisis and the role of chemical weapons in relation to US foreign policy. The Syrian government's use of such weapons and their subsequent elimination has dominated the US response to the conflict, where these are viewed as particularly horrific arms - a repulsion known

---

as the chemical taboo. On the surface, this would seem to be an appropriate reaction: these are nasty weapons and eradicating them would ostensibly comprise a 'good' move. But this book reveals two new aspects of the taboo that challenge this prevailing view. First, actors use the taboo strategically to advance their own self-interested policy objectives. Second, that applying the taboo to Syria has actually exacerbated the crisis. As such, this book not only provides a timely analysis of Syria, but also a major and original rethink of the chemical taboo, as well as international norms more widely.

The Sense of an Ending Academic Press

This book is a guide to asset and risk management from a practical point of view. It is centered around two questions triggered by the global events on the stock markets since the middle of the last decade: - Why do crashes happen when in theory they should not? - How do investors deal with such crises in terms of their risk measurement and management and as a consequence, what are the implications for the chosen investment strategies? The book presents and discusses two different approaches to finance and investing, i.e., modern portfolio theory and behavioral finance, and provides an overview of stock market anomalies and historical crashes. It is intended to serve as a comprehensive introduction to asset and risk management for bachelor 's and master 's students in this field as well as for young professionals in the asset management industry. A key part of this book is the exercises to further demonstrate the concepts presented with examples and a step-by-step business case. An Excel file with the calculations and solutions for all 17 examples as well as all business case calculations can be downloaded at

Government contracting is one of the most important issues facing federal, state, and local governments. As governments contend with lower tax revenues and a growing belief that smaller government is better government, contracting has become a fundamental means of providing goods and services to citizens. This volume, which is geared toward practitioners as well as students, addresses the broad range of issues that comprise government contracting – from the political, economic philosophy, and value of contracting – to the future of government contracting. Throughout the volume academic theory provides a foundation to address practical subjects, including the contract process, monitoring and evaluating contracts, ethics, and both federal and state local government contracting. Contributors to this volume are both academicians and practitioners, who together offer their scholarly expertise and practical experience, encouraging readers to ask the very question "What is the role of government in American society?" Through this approach, students will acquire the knowledge needed to understand the various aspects of government contracting, and practitioners will enhance their public procurement skills. Government Contracting is ideally suited to MPA students, practitioners in the public sector, and elected officials looking to enhance their understanding of privatization and contracting in order to provide public services more effectively.

The Kingdom of Saudi Arabia has established itself as the twelfth-largest economy in the world, the largest West Asian economic power,

---

world's largest oil producer, and a strong and capable force in international politics, particularly in the Sunni Islamic world. However, at present it is at crossroads. Should it continue as a 'kingdom' or usher in the process of inclusive political representation? This volume answers such questions and explores how the state is coping with domestic, regional and global developments to remain relevant in the changing times. It provides a holistic overview of a slew of economic, political, cultural, military and security policy measures that have been initiated by the government. The work also offers a detailed analysis of Saudi Arabia's relations with three significant powers – USA, China and India – and how they are evolving under new geopolitical and geostrategic dynamics. This book will interest strategists, policymakers, researchers and students of international relations, geopolitics, political science and political economy as well as the informed reader.

Should the European Neighbourhood Policy stop at the borders of the European Union's immediate neighbouring countries? This book is the first full length study of the

'neighbours of the EU's neighbours', a concept originally introduced by the European Commission with reference to Saharan Africa, the Middle East and Central Asia. These regions in the EU's broader neighbourhood are often perceived as an 'arc of crisis' from which manifold challenges emanate for Europe. This timely book takes stock of the state of the EU's cooperation with the neighbours of its neighbours and explores how the concept might help promote security, stability and prosperity beyond the countries which are formally part of the European Neighbourhood Policy. How can the EU create bridges between these regions? What instruments does the EU have at its disposal and how can it link them in order to respond to the challenges and overcome the current fragmentation? One of the conclusions is the suggestion to consider a pragmatic 'EU Strategy for the Neighbours of its Neighbours' which addresses the needs of the broader EU neighbourhood in a more systematic and consistent manner and helps transform in the long run the 'arc of crisis' into another 'ring of friends'.

The use of financial concepts and tools to shape development is hardly new, but their recent adoption by advocates of sustainable environmental management has created opportunities for innovation in business and regulatory groups. The Handbook of Environmental and Sustainable Finance summarizes the latest trends and attitudes in environmental finance, balancing empirical research with theory and applications. It captures the evolution of environmental finance from a niche scholarly field to a mainstream subdiscipline, and it provides glimpses of future directions for research. Covering implications from the Kyoto and Paris Protocols, it presents an intellectually cohesive examination of problems,

opportunities, and metrics worldwide. Introduces the latest developments in environmental economics, sustainable accounting work, and environmental/sustainable finance Explores the effects of environmental regulation on the economy and businesses Emphasizes research about the trade-environmental regulation nexus, relevant for economics and business students

Marching Through Suffering is a deeply personal portrait of the ravages of famine and totalitarian politics in modern North Korea since the 1990s. Featuring interviews with more than thirty North Koreans who defected to Seoul and Tokyo, the book explores the subjective experience of the nation's famine and its citizens' social and psychological strategies for coping with the regime. These oral testimonies show how ordinary North Koreans, from farmers and soldiers to students and diplomats, framed the mounting struggles and deaths surrounding them as the famine progressed. Following the development of the disaster, North Koreans deployed complex discursive strategies to rationalize the horror and

---

hardship in their lives, practices that maintained citizens' loyalty to the regime during the famine and continue to sustain its rule today. Casting North Koreans as a diverse people with a vast capacity for adaptation rather than as a monolithic entity passively enduring oppression, *Marching Through Suffering* positions personal history as key to the interpretation of political violence.

This unique volume presents new original research exploring factors that lead to investors behavioral biases. It discusses how features such as professionalism, sophistication, gender, media, and culture influence investors' decision-making in general, and in particular, how they generate (or limit) behavioral and cognitive biases. The effects of these factors on capital markets are also discussed. The book is based on the discussions and presentations at the First Israel Behavioral Finance Conference, which took place in Tel Aviv in May 2015. It examines in greater detail some of the key issues discussed at the conference. This is an innovative book in behavioral finance: it is the first to present an extensive collection of

papers which discuss a comprehensive array of factors that influence or define investor character and analyzes these factors' effects on financial markets. The book is useful for readers interested in understanding the factors that influence investors' profiles and thus their behavioral biases. The book will be of great interest to researchers and students seeking a reference book which contains timely research on these areas of behavioral finance.

On issues pertaining to women and girls, Stephen Harper's federal government positioned Canada as a "beacon of light" in the world. Programs were developed in relation to women's maternal health and the protection of the girl child, but other actions point to an ambiguous and even contradictory approach that failed to address gender inequality. In *Obligations and Omissions*, contributors examine Canada's equivocal - and diminished - role in working toward gender equality in the period between 2006 and 2015. Using a critical feminist lens to document, analyze, and challenge Canada's relations with the Global South, chapters explore the extent to which matters of gender equality have been erased or exploited under the Harper government and the factors that explain these policy shifts. While the contributors document successes in Canada's approach to some issues facing women and girls around the world, they also show many problems with the ways that agenda was framed and implemented under the

Conservative government.. Drawing on rich theoretical investigation, empirical research, and discourse analysis, *Obligations and Omissions* reveals a complex picture of diverse practices, underscoring the implications of these actions for communities in the Global South, for Canada's image in the international community, and for future governments in the pursuit of a renewed gender equality strategy.

While emphasizing that lawyers fulfill a vital but often misunderstood public function in society, *The American Legal Profession: The Myths and Realities of Practicing Law* by Christopher P. Banks dispels some of the common misconceptions about the legal profession to show that the reality of being a lawyer is much different from what many students believe it to be. Many students know little about what law school is like or how it differs from undergraduate study, and this book corrects common myths about graduating law school and life after passing the bar. This brief primer is a nuts-and-bolts analysis of what it is really like to go into the legal profession, from start to finish, giving students considering a career in law a realistic overview of their potential legal

careers.

EXPERT ANALYSIS OF AN ILLEGAL AND IMMORAL PRACTICE The Bush administration detained and tortured suspected terrorists; the Obama administration assassinates them.

Assassination, or targeted killing, off the battlefield not only causes more resentment against the United States, it is also illegal. In this interdisciplinary collection, human rights and political activists, policy analysts, lawyers and legal scholars, a philosopher, a journalist and a sociologist examine different aspects of the U.S. policy of targeted killing with drones and other methods. It explores the

---

legality, morality and geopolitical considerations of targeted killing and resulting civilian casualties, and evaluates the impact on relations between the United States and affected countries. The book includes the documentation of civilian casualties by the leading non-governmental organization in this area; stories of civilians victimized by drones; an analysis of the first U.S. targeted killing lawsuit by the lawyer who brought the case; a discussion of the targeted killing cases in Israel by the director of PCATI which filed one of the lawsuits; the domestic use of drones; and the immorality of drones using Just War principles. Contributors include: Archbishop Desmond Tutu, Phyllis Bennis, Medea Benjamin, Marjorie Cohn, Richard Falk, Tom Hayden, Pardiss Kebriaei, Jane Mayer, Ishai Menuchin, Jeanne Mirer, John Quigley, Dr. Tom Reifer, Alice Ross, Jay Stanley, and Harry Van der Linden.

national levels. Such analysis is fundamental to understanding the various factors and dynamics that drive homicide, so that measures can be developed to reduce violent crime. The Study provides a typology of homicide, including homicide related to crime, coexistence-related homicide, and socio-political homicide. The nature of crime in several countries emerging from conflict, the role of various mechanisms in killing, and the response of the criminal justice system to homicide are also analyzed. A further chapter examines homicide at the sub-national level, and includes analysis at the city-level for selected global cities.

This book examines the prospects and challenges of a global phase-out of highly enriched uranium—and the risks of this material otherwise being used by terrorists to make atom bombs. Terrorist groups, such as Al Qaeda, have demonstrated repeatedly that they seek to acquire nuclear weapons. Unbeknownst even to many security specialists, tons of bomb-grade uranium are trafficked legally each year for ostensibly peaceful purposes. If terrorists obtained even a tiny fraction of this bomb-grade uranium they could potentially construct a nuclear weapon like the one dropped on Hiroshima that killed tens of thousands. Nuclear experts and policymakers have long known of this danger but – so far – have taken only marginal steps to address it. This volume begins by highlighting the lessons of past successes where bomb-grade uranium commerce has been eliminated, such as from Argentina's manufacture of medical isotopes. It then explores the major challenges that still lie ahead: for example, Russia's continued use of highly enriched uranium (HEU) in dozens of nuclear facilities. Each of the book's thirteen case studies offers advice for reducing HEU in

a specific sector. These insights are then amalgamated into nine concrete policy recommendations for U.S. and world leaders to promote a global phase-out of bomb-grade uranium. This book will be of much interest to students of nuclear proliferation, global governance, international relations and security studies.

Researchers developed two scenarios to envision the future of mobility in China in 2030. Economic growth, the presence of constraints on vehicle ownership and driving, and environmental conditions differentiate the scenarios. By making potential long-term mobility futures more vivid, the team sought to help decisionmakers at different levels of government and in the private sector better anticipate and prepare for change.
