Now in its second edition, *How to Read Texts* introduces students to key critical approaches to literary texts and offers a practical introduction for students developing their own critical and close-reading skills. Written in a lively, jargon-free style, it explains critical concepts, approaches and ideas including: - Debates around critical theory - The role of history and context - The links between creativity and criticism - The relationship between author, reader and text. The new edition now includes guidance on analysing a range of multi-media texts, including film and online media as well as the purely literary. In addition to new practical examples, readings, exercises and 'checkpoints' that help students to build confidence in their own critical readings of both primary and secondary texts, the book now also offers guidance on writing fully-formed critical essays and tips for independent research. Comprehensively updated and revised throughout, *How to Read Texts* is an indispensable guide for students making the transition to university study.

Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. *Early Warning Systems and Targeted Interventions for Student Success in Online Courses* is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.

South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy. The dominant medium of instruction in the universities is English and, to a much lesser extent, Afrikaans, but only a minority of the national population are native speakers of these languages. Nine other languages can be media of instruction in schools, which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students, not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by

South African educators to a wider international audience.

This 2-volume set constitutes the proceedings of the 7th International Conference on e-Learning, e-Education, and Online Training, eLEOT 2021, held in Xinxiang, China, in June 2021. The 104 full papers presented were carefully reviewed and selected from 218 submissions. The papers are structured into two subject areas: New Trends of Teaching: Evaluation, Reform and Practice, and Intelligent Learning and Education. They focus on most recent and innovative trends and new technologies of online education which grows quickly and becomes the educational trend today. The theme of eLEOT 2021 was "The Educational Revolution: Opportunities and Challenges brought by COVID-19".

**Report of the Philippine Civil Service Board**

One of the most significant developments in school education in recent years has been the development and introduction of standards, a subject of considerable controversy. This book is the result of a symposium held in Kiel, a symposium that was arranged by two leading science education groups, one at IPN (Leibniz Institute for Science Education at the University of Kiel) in Germany and the other at the University of York, UK. The seminar brought together experts from 15 countries. These countries include those that have extensive experience with the effects of standards on the educational system, on individual schools and teachers and on students. Other reports concern countries which are introducing them shortly and yet others on countries that are in the early stages of development of standards. 11 are from Europe and the others are from Australia, Israel, Taiwan and the U.S. The book is divided into three parts. In Part A, two of the organizers set the scene, describing the reasons for arranging the symposium and outlining the preparations and the work done at the meeting. Part B contains 17 reports from the 15 countries and in Part C, there are two summaries, analysing the conclusions, taken from two different vantage points. The controversies surrounding standards remain. However, this book gives a succinct and authoritative overall account of the advantages and disadvantages of their introduction taken from the experiences of many countries.

*Elite Education - International Perspectives* is the first book to systematically examine elite education in different parts of the world. Authors provide a historical analysis of the emergence of national elite education systems and consider how recent policy and economic developments are changing the configuration of elite trajectories and the social groups benefiting from these. Through country-level case studies, this book offers readers an in-depth account of elite education systems in the Anglophone world, in Europe and in the emerging financial centres of Africa, Asia and Latin America. A series of commentaries highlight commonalities and differences between elite education systems, and offer insights into broader theoretical issues, with which educationalists, researchers and policy makers are engaging. With authors including Stephen J. Ball, Donald Broady, Rubén Gaztambide-Fernández, Heinz-Hermann Krüger, Maria Alice Nogueira, Julia Resnik and Agnès van Zanten, the book offers a benchmark perspective on issues frequently glossed over in comparative education, including the processes by which powerful groups retain privilege and 'elite' status in rapidly changing societies. *Elite Education - International Perspectives* will appeal to policy makers and academics in the fields of education and sociology. Simultaneously it will be of special relevance to post-graduates enrolled on courses in the sociology of education, education policy, and education and international development.
