This textbook lays out the state of the art for modeling of asphalt concrete as the major structural component of flexible pavements. The text adopts a pedagogy in which a scientific approach, based on materials science and continuum mechanics, predicts the performance of any configuration of flexible roadways subjected to cyclic loadings. The authors incorporate state-of-the-art computational mechanics to predict the evolution of material properties, stresses and strains, and roadway deterioration. Designed specifically for both students and

practitioners, the book presents fundamentally complex concepts in a clear and concise way that aids the roadway design community to assimilate the tools for designing sustainable roadways using both traditional and innovative technologies.

This book can be read like a series of short stories - the story of a steel worker who was laid off after twenty years in the same factory and who now struggles to support his family on unemployment benefits and a part-time job; the story of a trade unionist who finds his goals undermined by the changing nature of work; the story of a family from Algeria living in a housing estate in the outskirts of Paris whose members have to cope with pervasive, everyday forms of racism; the story of a school teacher confronted with urban violence; and many others as well. Reading these stories enables one to understand these people's lives and the forms of social suffering which are part of them. And the reader will see that this book offers not only a distinctive method for analysing social life, but also another way of practising politics.

This practical training guidebook makes an important contribution to karst hydrogeology. It presents supporting material for academic courses worldwide that include this and similar topics. It is an excellent sourcebook for students and other attendees of the International Karst School: Characterization and Engineering of Karst Aquifers, which opened in Trebinje, Bosnia & Herzegovina in 2014 and which will be organized every year in early summer. As opposed to more theoretical works, this is a catalog of possible engineering interventions in karst and their implications. Although the majority of readers will be professionals with geology/hydrogeology backgrounds, the language is not purely technical making it accessible to a wider audience. This means that the methodology, case studies and experiences presented will also benefit water managers working in karst

environments.

In this essential rereading of Spinoza's (1632-1677) philosophical and political writings, Negri positions this thinker within the historical context of the development of the modern state and its attendant political economy. Through a close examination of Spinoza, Negri reveals turn as unique among his contemporaries for his nondialectical approach to social organization in a bourgeois age.

This open access book focuses on Switzerland-based medium-sized companies with a longstanding export tradition and a proven dominance in global niche markets. Based upon in-depth documentation and analysis of 36 Swiss companies over their entire history, an expert team of authors presents several parallels in the pathways and success factors which allowed these firms to become dominant and operate from a high-cost location such as Switzerland. The book enhances these insights by providing detailed company profiles documenting the company history, development,

---

and how their relevant global niche positions were reached. Readers will benefit from these profiles as they compile a diverse selection of industries, mainly active within the B2B sector, with mostly mature companies (60 years to older than 100 years since founding) and different types of ownership structures including family firms. 'Masterpieces of Swiss Entrepreneurship' brings unique learning opportunities to owners and leaders of SMEs in Switzerland and elsewhere. Findings are based on detailed bottom-up research of 36 companies -- without any preconceived notions. The book is both conceptual and practical. It fosters understanding for different choices in development pathways and management practices. Start-up entrepreneurs need proven models from industry which demonstrate the various paths to success. "Masterpieces of Swiss Entrepreneurship" provides deep insights highlighting these models and the important trade-offs entrepreneurial teams must consider when choosing the path of high growth or of maximum control, as they are often mutually exclusive. bookdown: Authoring Books and Technical Documents with R

Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts,

---

study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub. In the post Cold War, the role of diplomacy has visibly expanded in much more unstable international conditions. This is partly because more complex relationships between a larger number of power centers have emerged including non-governmental organizations as well as states. These developments are adding to the machinery of diplomacy expanding the number of topics of negotiation and modifying the established character of diplomacy in significant ways. This book explores the historical development of diplomacy from the earliest times and shows how it has grown and adapted its methods to the needs of previous international environments. It follows these developments from the late twentieth century and concludes that while diplomacy techniques have adapted in response to very new needs and technological advances in

communication, the activity itself remains inevitable and has never been more important.--Publisher description.

**Dictionary Catalog of the History of the Americas** John Wiley & Sons  
Traditional separation of powers theories assumed that governmental despotism will be prevented by dividing the branches of government which will check one another. Modern governments function with unexpected complicity among these branches. Sometimes one of the branches becomes overwhelming. Other governmental structures, however, tend to mitigate these tendencies to domination. Among other structures courts have achieved considerable autonomy "vis-a-vis" the traditional political branches of power. They tend to maintain considerable distance from political parties in the name of professionalism and expertise. The conditions and criteria of independence are not clear, and even less clear are the conditions of institutional integrity. Independence (including depolitization) of public institutions is of particular practical relevance in the post-Communist countries where political partisanship penetrated institutions under the single party system. Institutional integrity, particularly in the context of administration of justice, became a precondition for accession to the European Union. Given this practical challenge the present volume is centered around three key areas of institutional integrity, primarily within the administration of justice: First, in a broader theoretical-

---

interdisciplinary context the criteria of institutional independence are discussed. The second major issue is the relation of neutralized institutions to branches of government with reference to accountability. Thirdly, comparative experience regarding judicial independence is discussed to determine techniques to enhance integrity.

The "Microbiology" volume of the new revised and updated Handbook of Enology focuses on the vinification process. It describes how yeasts work and how they can be influenced to achieve better results. It continues to look at the metabolism of lactic acid bacterias and of acetic acid bacterias, and again, how can they be treated to avoid disasters in the winemaking process and how to achieve optimal results. The last chapters in the book deal with the use of sulfur-dioxide, the grape and its maturation process, harvest and pre-fermentation treatment, and the basis of red, white and speciality wine making. The result is the ultimate text and reference on the science and technology of the vinification process: understanding and dealing with yeasts and bacterias involved in the transformation from grape to

wine. A must for all serious students and practitioners involved in winemaking.

It is a widely held belief that a climax vegetation of closed forest systems covered the lowlands of Central and Western Europe before man intervened in prehistoric times to develop agriculture. If this intervention had not taken place, the forest would still be there, and if left the grassland vegetation and fields now present would revert to a natural closed forest state, although with a reduced number of wild species. This book, which an updated and expanded version of the author's 1997 thesis (presented to the Wageningen University, Netherlands), challenges the traditional view, using examples from history, pollen analyses and studies on the ecology of tree and shrub species such as oak and hazel. It tests the hypothesis that the climax vegetation is a closed canopy forest, against the alternative hypothesis that species composition and vegetational succession were governed by large herbivores, and that the Central and Western European lowlands were covered by a park-like landscape consisting of grasslands, scrub, solitary trees and groves bordered by a mantle and fringe vegetation.

---

Comparative information from the eastern USA is also included throughout the book (this was not present in the thesis), because the forests there are commonly regarded as being analogous to the primeval vegetation in Europe. The book is arranged in 7 chapters: (1) General introduction and formulation of the problem; (2) Succession, the climax forest and the role of large herbivores; (3) Palynology, the forest as climax in prehistoric times and the effects of humans; (4) The use of the wilderness from the Middle Ages up to 1900; (5) Spontaneous succession in forest reserves in the lowlands of Western and Central Europe - including examples from France, Germany, Austria, Slovenia, Sweden, Poland; (6) Establishment of trees and shrubs in relation to light and grazing; and (7) Final synthesis and conclusions. Twelve appendices are included giving further information, and there are 67 pages of references and a subject index.

In 1967, Canada celebrated the 100th anniversary of its founding with a spectacular party, and the whole world was invited.

Montreal's Expo 67 was the first world's fair held in Canada, and it was a huge success, attracting over 50 million visitors. The 1,000-acre site was built on two man-made islands in the St. Lawrence River and incorporated 90 futuristic pavilions created by some of the world's greatest architects and designers. Over 60 countries were represented, along with many private, corporate and thematic pavilions, all brought together under the theme "Man and his World." With performers and entertainers of all varieties, restaurants, cultural attractions, exhibitions and a world-class amusement park, Expo 67 was literally the party of the century, exceeding all expectations.

This book covers the methodological, epistemological and practical issues of integrating qualitative and socio-anthropological factors into archaeological modeling. This text fills the gap between conceptual modeling (which usually relies on narratives describing the life of a past community) and formalized/computer-based modeling which are usually environmentally-

---

determined. Methods combining both environmental and social issues through niche and agent-based modeling are presented. These methods help to translate data from paleo-environmental and archaeological society life cycles (such as climate and landscape changes) into the local spatial scale. The epistemological discussions will appeal to readers as well as the resilience socio-anthropological factors provide facing climatic fluctuations. Integrating Qualitative and Social Science Factors in Archaeological Modelling will appeal to students and researchers in the field. *Handbook of Enology, Volume 1* Taylor & Francis

This book traces the history and development of a mutual organization in the financial sector called SWIFT, the Society for Worldwide Interbank Financial Telecommunication. Over the last forty years, SWIFT has served the financial services sector as proprietary communications platform, provider of products and services, standards developer, and conference organizer ("Sibos"). Founded to create efficiencies by replacing telegram and telex (or 'wires') for international payments,

SWIFT now forms a core part of the financial services infrastructure. It is widely regarded as the most secure trusted third party network in the world serving 212 countries and over 10,000 banking organizations, securities institutions and corporate customers. Through every phase of its development, SWIFT has maintained the status of industry cooperative thus presenting an opportunity to study broader themes of globalization and governance in the financial services sector. In this book the authors focus on how the design and current state of SWIFT was influenced by its historical origins, presenting a comprehensive account in a succinct form which provides an informative guide to the history, structure, activities and future challenges of this key international organization. This work will be of great interest to students and scholars in a wide range of fields including IPE, comparative political economy, international economics, business studies and business history.

Recent developments in information and communication technology (ICT) have paved the way for a world of advanced communication, intelligent information processing and ubiquitous access to information and services. The ability to work, communicate, interact, conduct business, and enjoy digital entertainment virtually anywhere is rapidly becoming commonplace due to a multitude of small devices, ranging from mobile phones and PDAs to RFID tags and wearable computers. The increasing number of connected devices and the proliferation of networks provide no indication of a slowdown in this tendency. On the negative side, misuse of this same technology entails serious risks in various aspects, such as privacy violations, advanced

electronic crime, cyber terrorism, and even enlargement of the digital divide. In extreme cases it may even threaten basic principles and human rights. The aforementioned issues raise an important question: Is our society ready to adopt the technological advances in ubiquitous networking, next-generation Internet, and pervasive computing? To what extent will it manage to evolve promptly and efficiently to a next-generation society, addressing the forthcoming ICT challenges? The Third International ICST Conference on e-Democracy held in Athens, Greece during September 23-25, 2009 focused on the above issues. Through a comprehensive list of thematic areas under the title "Next-Generation Society: Technological and Legal issues," the 2009 conference provided comprehensive reports and stimulated discussions on the technological, ethical, legal, and political challenges ahead of us.
