After more than a century of study, the hydrogen atom still presents challenges and opportunities to theoretical as well as to experimental physicists. The discovery of the Lamb shift in the late nineteen forties, followed by the development of QED and the introduction of powerful new experimental techniques in the nineteen sixties and seventies, have preserved for hydrogen its central place in atomic physics. Part I of this book, a reprint of the work published in 1957, covers the period from the earliest days up to the late nineteen fifties. Part II, a collection of progress reports written by well-known specialists on hydrogen and hydrogen-like systems, presents the advances in theory and experiment that have occurred since that time. Contents: Advances in Experimental Methods (E Hinds & G Series) Quantum Electrodynamics Calculations (P Mohr) Theory of Transitions, and the Electroweak Interaction (G Drake) Radiofrequency Spectroscopy (E Hinds) Optical Spectroscopy (G Series & T H änsch) Spectroscopy of One-Electron Ions of Intermediate and High Z (E Tr äbert) Hydrogenic Systems in Electric and Magnetic Fields (J Gay) Spectroscopy of Positronium (A Mills Jr.) Temperature-Dependent Level Shifts (G Barton) Hydrogen and the Fundamental Atomic Constants (G Series) Readership: Physicists and chemists.

A SECRET SORROW Cherry Blossom Press

This text is the product of several years' effort to develop a course to fill a specific educational gap. It is our belief that computer science students should know how a computer works, particularly in light of rapidly changing technologies. The text was designed for computer science students who have a calculus background but have not necessarily taken prior physics courses. However, it is clearly not limited to these students. Anyone who has had first-year physics can start with Chapter 17. This includes all science and engineering students who would like a survey course of the ideas, theories, and experiments that made our modern electronics age possible. This textbook is meant to be used in a two-semester sequence. Chapters 1 through 16 can be covered during the first semester, and Chapters 17 through 28 in the second semester. At Queens College, where preliminary drafts have been used, the material is presented in three lecture periods (50 minutes each) and one recitation period per week, 15 weeks per semester. The lecture and recitation are complemented by a two-hour laboratory period per week for the first semester and a two-hour laboratory period biweekly for the second semester.

Behind the Front Panel by David Rutland, an electronics engineer with over 25 years of experience in the design of vacuum tube circuits, explores the whys and wherefores of the components and circuits of the first broadcast radios. By using simplified descriptions and illustrations, supplemented by 25 photographs of actual radio component parts, he provides a readable explanation of what goes on inside the old battery radios. His story begins with the invention of the radio tube at the turn of the last century and concentrates on the engineering design and development through the 1920's. Design examples are taken from over 45 actual radios manufactured in the decade that saw broadcast radio start as a national pastime and end as a national necessity. This book is a classic in radio history. This edition is carefully re-mastered from the original and published by the California Historical Radio Society.

This is the most current textbook in teaching the basic concepts of abstract algebra. The author finds that there are many students who just memorise a theorem without having the ability to apply it to a given problem. Therefore, this is a hands-on manual, where many typical algebraic problems are provided for students to be able to apply the theorems and to actually practice the methods they have learned. Each chapter begins with a statement of a major result in Group and Ring Theory, followed by problems and solutions. Contents: Tools and Major Results of Groups; Problems in Group Theory; Tools and Major Results of Ring Theory; Problems in Ring Theory; Index.

“When you die, it does not mean that you lose to cancer. You beat cancer by how you live, why you live, and the manner in which you live.” – Stuart Scott The fearless, intimate, and inspiring story behind ESPN anchor Stuart Scott’s unrelenting fight against cancer, with a foreword by Robin Roberts. Shortly before he passed away, on January 4, 2015, Stuart Scott completed work on this memoir. It was both a labor of love and a love letter to life itself. Not only did Stuart relate his personal story—his childhood in North Carolina, his supportive family, his athletic escapades, his on-the-job training as a fledgling sportscaster, his being hired and eventual triumphs at ESPN—he shared his intimate struggles to keep his story going. Struck by appendiceal cancer in 2007, Stuart battled this rare disease with an unimaginable tenacity and vigor. Countless surgeries, enervating chemotherapies, endless shuttling from home to hospital to office and back—Stuart continued defying fate, pushing himself through exercises and workout routines that kept him strong. He wanted to be there for his teenage daughters, Sydni and Taelor, not simply as their dad, but as an immutable example of determination and courage. Every Day I Fight is a saga of love, an inspiration to us all.
