### Operative Manual of Endoscopic Surgery 2

Springer Science & Business Media

The second volume of Operative Manual of Endoscopic Surgery covers some of the operative endoscopic procedures which have been introduced into clinical practice since the publication of Vol. 1. In the general section, we have included an updated chapter on instrumentation and new chapters on anaesthetic

management of patients undergoing endoscopic surgery and on video image and recording.

Both topics are of importance to the practice of endoscopic surgery and have not been adequately covered in the reported literature. Volume 2 deals with endoscopic procedures in the chest and abdomen. There have been significant advances in thoracoscopic surgery during the past 2 years; particular references made to anatomical pulmonary resections and oesophageal resections. As far as the gastrointestinal tract is concerned, we have included gastric and allied operations but have not covered the colorectal region as we believe that more evaluation is needed

---

before definitive accounts can be written on endoscopic colorectal resections, especially for cancer. For this reason, we have decided to defer this important topic to Vol. 3, which is in preparation. The same applies to laparoscopic repair of abdominal hernias. The same layout has been adopted as in Vol. 1 of the series, with heavy emphasis on illustrative representation of the operative steps and techniques. In the diagrams on sites of trocar/cannulae, we have indicated not only the site and size but also the functional role of each port.

Since the first edition of *Light Microscopy in Biology: A Practical* approach was published, techniques in modern light microscopy have improved considerably. This fully updated edition includes revised topics from the first edition as well as coverage of techniques and technologies that have been developed since it was published. As before, the book starts with an explanation of the basic techniques, and goes on to describe current methods in: chromosome microscopy, immunohistochemistry, fluorescence microscopy, image building and video microscopy. Totally new topics covered include: confocal microscopy, calcium and pH imaging, microinjection techniques and nanovid microscopy. There are also whole chapters now devoted to reflection contrast microscopy and histomorphometry. This new edition will be of great

interest to postgraduate and postdoctoral researchers in biomedicine and cell biology - both those experienced with light microscopic techniques and newcomers to the field.
