A novel and timely primer to the 3DTV system chain from capture to display
This book examines all aspects of the 3DTV chain, from capture to display. It helps the reader learn about the key issues for 3DTV technology. It also provides with a systems level appreciation of 3DTV systems, and an understanding of the fundamental principles behind each part of the chain. At the end of each chapter, the author provides resources where readers can learn more about the technology covered (e.g. more focused text books, key journal papers, and

key standards contributions). Provides a fundamental and systematic introduction and description of 3DTV key techniques, which build up the whole 3DTV system from capture to consumer viewing at the home. Addresses the quick moving field of 3D displays which is attracting increasing interest from industry and academia. Concepts in the book will be illustrated using diagrams and example images of processed 3D content. The 3D content will be presented as 2D images in the book. Authors to host website providing pointers to more information on the web, freely available tools which would enable readers to

experiment with coding video, simulate its transmission over networks, play it back in 3D, and measure the quality and links to important news and developments in the field.

HWM The second volume of Operative Manual of Endoscopic Surgery covers some of the operative endoscopic procedures which have been introduced into clinical practice since the publication of Vol. 1. In the general section, we have included an updated chapter on instrumentation and new chapters on anaesthetic management of patients undergoing

endoscopic surgery and on video image and recording. Both topics are of importance to the practice of endoscopic surgery and have not been adequately covered in the reported literature. Volume 2 deals with endoscopic procedures) in the chest and abdomen. There have been significant advances in thoracoscopic surgery during the past 2 years; particular references made to anatomical pulmonary resections and oesophageal resections. As far as the gastrointestinal

trad is concerned, we have included gastric and allied operations but have not covered the colorectal region as we believe that more evaluation is needed before definitive accounts can be written on endoscopic colorectal resections, especially for cancer. For this reason, we have decided to defer this important topic to Vol. 3, which is in preparation. The same applies to laparoscopic repair of abdominal hernias. The same layout has been adopted as in Vol. 1 of the series, with heavy em

phasis on illustrative representation of the operative steps and techniques. In the diagrams on sites of trocar/cannulae, we have indicated not only the site and size but also the functional role of each port.
