Cryptosporidium, in its various forms, is a widely recognised cause of outbreaks of waterborne disease. Regulatory bodies worldwide are increasingly requiring the development of "fit-for-purpose" detection methods for this protozoan parasite, but analysis is often problematic. Bringing together international academic and industry-based experts, this book provides a comprehensive review of the current state of analytical

techniques for the detection of *Cryptosporidium*, as well as looking at likely future developments. In particular, the issues of species identification and oocyst viability are addressed. Quality assurance issues and potential problems associated with the new *Cryptosporidium* regulations are also highlighted. The extent of the perceived problems and the regulatory backdrop against which the analysis must be carried out are also discussed. Scientists in the water industry, environmental testing laboratories, researchers, consultants, environmental health professionals, food manufacturers and regulatory or environmental bodies are amongst the many who should read this book. In addition, anyone with an interest in microbiological challenges and problem-solving will welcome the coverage.

Operative Manual of Endoscopic Surgery 2

The second volume of Operative Manual of Endoscopic Surgery covers some of the operative endoscopic procedures which have been introduced into clinical practice since the publication of Vol. 1. In the general section, we have included an updated chapter on instrumentation and new chapters on anaesthetic management

of patients undergoing endoscopic surgery and on video image and recording. Both topics are of importance to the practice of endoscopic surgery and have not been adequately covered in the reported literature. Volume 2 deals with endoscopic procedures) in the chest and abdomen. There have been significant advances in thoracoscopic surgery during the past 2 years; particular reference is made to anatomical pulmonary resections and oesophageal resections. As far as the gastrointestinal tract is concerned, we have included gastric and allied operations but have not covered the colorectal region as we believe that more evaluation is needed before definitive accounts can be written

on endoscopic colorectal resections, especially for cancer. For this reason, we have decided to defer this important topic to Vol. 3, which is in preparation. The same applies to laparoscopic repair of abdominal hernias. The same layout has been adopted as in Vol. 1 of the series, with heavy emphasis on illustrative representation of the operative steps and techniques. In the diagrams on sites of trocar/cannulae, we have indicated not only the site and size but also the functional role of each port.
