provides clear explanations of the technology of video equipment, which will enable the service engineer to gain a thorough knowledge of the equipment with which they are working. As well as traditional VCRs the scope of Video and Camcorder Servicing and Technology includes the full range of video cameras designed for home use and editing systems, and the latest DVD and hard-disk equipment. The resulting book is an essential bench reference tool for all service engineers, a guide to the technology for a wide range of professionals, and the most comprehensive college text for City & Guilds / EEB and other courses. Steve Beeching's guides to servicing video equipment have long been the definitive texts for service engineers and students. This book is the successor to the classic Servicing Video Cassette Recorder Equipment, which has been the leading

PAL-based title on video equipment since 1983. #### JVC Service Manual

This book is essential for audio  
power amplifier designers and  
engineers for one simple reason...it  
enables you as a professional to  
develop reliable, high-  
performance circuits. The Author  
Douglas Self covers the major

issues of distortion and linearity,  
power supplies, overload, DC-  
protection and reactive loading.  
He also tackles unusual forms of  
compensation and distortion  
produced by capacitors and fuses.  
This completely updated fifth  
edition includes four NEW  
chapters including one on The XD  
Principle, invented by the author,  
and used by Cambridge Audio.  
Crosstalk, power amplifier input  
systems, and microcontrollers in  
amplifiers are also now discussed in  
this fifth edition, making this book  
a must-have for audio power  
amplifier professionals and  
audiophiles.

The first three editions of this  
book were well received by  
service engineers, technical  
college teaching staff and  
technically minded  
enthusiasts as a guide to VCR  
techniques. Confining itself  
to the principles and practice  
of domestic machines, and  
discussing them in depth, this  
book has quickly become

established as a useful benchside reference and as an aid to students taking technical courses. Several new sections have been added to the fourth edition. A new part of the introduction covers the basic theory of magnetic recording and bandwidth, leading up to frequency modulation for video signals. Information on older systems, Philips N1500/N1700, Betamax and V2000 has been retained as these form the basis of 8mm and SOVHS. Most domestic videorecorders have some editing capabilities and a section on editing has been introduced. Advanced picture enhancement has been added to extend the theory of FM recording and replay and the concepts of signal processing. Billboard
