It was originally equipped with the F6A engine: later models were fitted with a K6A engine which was lighter and had chain-driven, rather than belt-driven camshafts and more torque. Both are DOHC 12-valve, inline 3-cylinder engines that were turbocharged and intercooled.

In 2000 Suzuki introduced the K6A 660cc engine, the main difference was this engine was chain driven instead of rubber timing belt drive. The K6A also uses pucks and shims between the engine valves and the cam shaft. This style of cam and valve train assembly makes it very difficult to adjust the valve lash clearance.

This is a list of automobile engines  
developed and sold by the Suzuki Motor  
Corporation. Suzuki is unusual in never  
having made a pushrod automobile engine,  
and in having depended on two-strokes  
for longer than most. Their first four-  
stroke engine was the SOHC F8A, which  
appeared in 1977. Suzuki continued to

The engine that started it all off for Isuzu  
was the Lotus-inspired G180 DOHC,  
which put out up to 97kW at 6400 rpm  
from its injected 8 valve DOHC design.  
But the 'big daddy' of the G-engines was  
the G200 DOHC, with the same basic  
design but 101kW at 6200 and 167Nm at  
5000.

Just looking around the used parts  
market for myself and have come  
across a K6A engine from a Wagon R  
Turbo at a great price. Was wondering  
how similar/different these are in  
fitting/performance etc when  
compared to the earlier F6A.
