Mathematics: Its Power and Utility R.I.C. Publications

MATHEMATICS: ITS POWER AND UTILITY, Tenth Edition, combines a unique and practical focus on real-world problem solving allowing even the least-interested or worst-prepared student to appreciate the beauty and value of math while mastering basic concepts and skills they will apply to their daily lives. The first half of the book explores the POWER and historic impact of mathematics and helps students harness that POWER by developing an effective approach to problem solving. The second half builds upon this foundation by exploring the UTILITY and application of math concepts to a wide variety of real-life situations: money management; handling of credit cards; inflation; purchase of a car or home; the effective use of probability, statistics, and surveys; and many other topics of life interest. Unlike many mathematics texts, **MATHEMATICS: ITS POWER AND UTILITY**, Tenth Edition, assumes a basic working knowledge of arithmetic, making it effective even for students with no exposure to algebra. Completely self-contained chapters make it easy to teach to a customized syllabus or support the precise pace

and emphasis that students require. Important

Mathematics Today Tyndale House Publishers, Inc. A perennial bestseller by eminent mathematician G. Polya, *How to Solve It* will show anyone in any field how to think straight. In lucid and appealing prose, Polya reveals how the mathematical method of demonstrating a proof or finding an unknown can be of help in attacking any problem that can be "reasoned" out—from building a bridge to winning a game of anagrams. Generations of readers have relished Polya's deft—indeed, brilliant—instructions on stripping away irrelevancies and going straight to the heart of the problem.

All contents are in English except some headings for the purpose of selling in China. Only the knowledge of basic chess moves is needed in solving some of the problems. The chess moves can be easily learned in a few minutes with my inventions of Geometry Chess Symbols which show what you see is what you move. The are not many math contests for grades 1 and 2.

The main reason, I think, is the limited math computation ability of lower grades students. Many North American students will not learn multiplication until grade 3, but many Asian countries and areas learn times table at grade 2, so there is one year of difference of learning ahead in China. This workbook has brought its standard to meet the highest possible math curriculum in the world so four operations of computation appear in this workbook. The earlier the students could master the skills of four basic operations, the more the students could explore many possibilities of word problem computation problems. With this in mind, how does the very popular Math Kangaroo Contest test the grade 1 and grade 2 students? How is it different from other math contests? The Math Kangaroo grades 1 and 2 Contest almost does not include the direct math computation problems which are very different from the math contests in China where direct computation problems could include skillful computation problems. I analyzed the most recent years of Canadian Math Kangaroo Contest grade 1 and 2 problems and they start to emerge some characteristics and categories, so I include here to help students prepare for it. The lower grade math contest tends to skew to the more visual operation type of problems. The problems could be classified as follows: Arrangement and sorting numbers Patterns of figures and numbers Counting figures or shapes or paths Cubes or cards math including rotation or folding Identifying parts of a figure or finding what part of a figure is missing Number puzzles including filling numbers into

empty spaces Logic and reasoning problems Word problems Including some Chinese model problems All other problems which do not belong to the above. Many of the above problems are not typical problems appeared in the books where you can buy from a bookstore because the problems in the math contests are much more complicated and involve a lot of creativities. A companion series to our "Competitive Mathematics for Gifted Students," the series "Math Challenges for Gifted Students" offers additional material in practice test form. The workbooks are useful for assessment and for development of testing skills. In full color and with fully detailed solutions, the workbooks may be used as a fun introduction to competitive problem solving. However, the problems are a bit more difficult than actual Kangaroo problems, exploring a large number of known 'tips and tricks.' One could say it is much more concentrated in that, unlike actual exams, it has less 'filler' - almost every problem is 'tricky' and embodies a specific strategy. The material is excellent for training purposes and has been used by the authors in seminars with hundreds of the most gifted students in the Bay Area. The workbook contains six 24-question tests. After each test there is an answer key. The tests are followed by detailed solutions. The recommended time limit for each test is of 75 minutes. Students who have not been exposed to competitive problem solving will find this book extremely difficult and will need help from an adult. Without preparation, students who get 'A' in school generally score about 50 points out of 96 possible on Kangaroo level 1-2.

filling numbers into empty spaces In 2015, I started to pay attention to Chinese after-school learning centre's teaching materials and started to compare their teaching materials with our North American materials. At the same time, I researched the materials from Singapore, Taiwan, and puzzles from Japan and Britain. These analytical researches have led me to have an idea to combine all my published workbooks into one large workbook which includes math contest problems, IQ fitness, word problems, and chess and math integrated worksheets. This workbook is unique and one-of-a-kind. It also represents my idea of showcasing why math is fun to children and my ideas of using inquiry and conceptual teaching (探索及观念教学法), then reinforced by procedural practices (步骤及题库). I have used many of these worksheets on my own students in my classes and witnessed their feedback. Most children do not want to do just computation problems for 2 hours; very few students like to work on math contest problems for 2 hours continuously, so puzzles and chess problems are fun for them for a change.
