This cluster of books presents innovative

and nuanced knowledge on water resources, based on detailed case studies from South Asia—India, Bangladesh, Bhutan, Nepal, Pakistan, and Sri Lanka. In providing comprehensive analyses of the existing economic, demographic and ideological contexts in which water policies are framed and implemented, the volumes argue for alternative, informed and integrated approaches towards efficient management and equitable distribution of water. These also explore the globalization of water governance in the region, particularly in relation to new paradigms of neoliberalism, civil society participation, integrated water resource management (IWRM), public–private partnerships, privatization, and gender mainstreaming. These volumes will be indispensable for scholars and students of development studies, environmental studies, natural resource management, governance and public administration, particularly those working on water resources in South Asia. They will also be useful for policymakers and governmental and non-governmental organizations.

Many people have experienced such unusual phenomena as dreams that later seem to correspond with unforeseeable events, thinking of a long-lost friend just before he or she unexpectedly calls, or the ability to "feel" the presence of deceased loved ones. What many do not realize is that these types of experiences have been researched for more than a century by eminent scientists, including Nobel laureates. Most of these researchers have concluded that some of these phenomena do occur, although we are far from explaining them to everyone's satisfaction. This book is the first in almost 40 years to provide a comprehensive scientific overview

of research in the field of parapsychology, explaining what we know and don't know about so-called psi phenomena, such as "telepathy," "precognition" or "psychokinesis." Contributors evaluate the evidence for these phenomena, accounting for factors such as selective memory, wish fulfillment and incorrect methods or analyses, in some cases offering psychological, physical and biological theories. Instructors considering this book for use in a course may request an examination copy here.

This book brings together ancient spiritual wisdom and modern science and philosophy to address age-old questions regarding our existence, free will and the nature of conscious awareness. Stuart Hameroff MD Professor, Anesthesiology and Psychology, and Director, Center for Consciousness Studies The University of Arizona, Tucson, Arizona This book presents a rich, broad-ranging overview of contemporary research and scholarship into consciousness and the self.... It is ... to their credit that the editors have assembled a highly stimulating set of scholars whose expertise cover all the relevant areas. I strongly recommend the book to anyone with an interest in understanding the directions in which contemporary thinking about the nature of

consciousness is headed. B. Les Lancaster Emeritus Professor of Transpersonal Psychology Liverpool John Moores University, UK This volume is a collection of 23 essays that contribute to the emerging discipline of consciousness studies with particular focus on the concept of the self. The essays together argue that to understand consciousness is to understand the self that beholds consciousness. Two broad issues are addressed in the volume: the place of the self in the lives of humans and nonhuman primates; and the interrelations between the self and consciousness, which contribute to the understanding of cognitive functions, awareness, free will, nature of reality, and the complex experiential and behavioural attributes of consciousness. The book presents cutting-edge and original work from well-known authors and scholars of philosophy, psychiatry, behavioural sciences and physics. This is a pioneering attempt to present to the reader multiple ways of conceptualizing and thus understanding the relation between consciousness and self in a nuanced manner.

The winners of the Nobel Prize in Economics upend the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor

borrow to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the *Wall Street Journal*, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

Corruption... How can policymakers and practitioners better comprehend the many forms and shapes that this social pandemic takes? From the delivery of essential drugs, the reduction in teacher absenteeism, the containment of illegal logging, the

construction of roads, the provision of water and electricity, the international trade in oil and gas, the conduct of public budgeting and procurement, and the management of public revenues, corruption shows its many faces. 'The Many Faces of Corruption' attempts to bring greater clarity to the often murky manifestations of this virulent and debilitating social disease. It explores the use of prototype road maps to identify corruption vulnerabilities, suggests corresponding 'warning signals,' and proposes operationally useful remedial measures in each of several selected sectors and for a selected sample of cross cutting public sector functions that are particularly prone to corruption and that are critical to sector performance. Numerous technical experts have come together in this effort to develop an operationally useful approach to diagnosing and tackling corruption. 'The Many Faces of Corruption' is an invaluable reference for policymakers, practitioners, and researchers engaged in the business of development.
