"Rock Engineering provides a comprehensive explanation of the geological principles and ground investigations involved with the geotechnical design and engineering of underground projects. It offers an internationally applicable, practical guide for engineers and geologists responsible for considering different ground conditions, design and planning for excavation and underground projects. This informative and highly illustrated resource combines theoretical knowledge and practical examples of rock engineering with detailed case studies of tunnelling and hydropower projects. Theories and realities of risks and uncertainties are discussed to provide an understanding of the considerations needed for successfully planning and executing underground projects. This fully updated edition has added focus on rock engineering applications in design, planning and excavation. Special chapters have been added dealing with the practical use of the Eurocode in rock design, the design principles of some special underground projects and three case histories. The ambition is to better cover the complex engineering geological process in rock construction, from ground investigation to execution"--Back cover.

[Globalization of Water Governance in South Asia](#) John Wiley & Sons

Globalization has significantly redefined the nature of governance in the water sector. Non-state actors—multilateral and transnational donor agencies and corporations, non-government organizations, markets, and civil society at large—are assuming a bigger role in public policy-making for water resource management. New discourses on neoliberalism, integrated water resource management (IWRM), public–private partnerships, privatization, and gender equity have come to influence water governance. Drawing upon detailed case studies from India, Bangladesh, Nepal, Sri Lanka, and Bhutan, this volume shows the implications of these new global paradigms for water allocation and management practices, institutions and governance structures in South Asia. It suggests that,

despite claims to the contrary, they have done little to further human well-being, reduce gender disparity, or improve accountability and transparency in the system. Steering away from blueprint approaches, it argues for a more nuanced and contextual understanding of water management challenges, based on local knowledge and initiatives. This book will be useful to those interested in political economy and water governance, natural resource management, environmental studies, development studies, and public administration, as well as to water professionals, policy-makers and civil society activists.

[Cultural History of Karnataka](#) Taylor & Francis

When Harvard-trained sociologist Peter Moskos left the classroom to become a cop in Baltimore's Eastern District, he was thrust deep into police culture and the ways of the street--the nerve-rattling patrols, the thriving drug corners, and a world of poverty and violence that outsiders never see. In *Cop in the Hood*, Moskos reveals the truths he learned on the midnight shift. Through Moskos's eyes, we see police academy graduates unprepared for the realities of the street, success measured by number of arrests, and the ultimate failure of the war on drugs. In addition to telling an explosive insider's story of what it is really like to be a police officer, he makes a passionate argument for drug legalization as the only realistic way to end drug violence--and let cops once again protect and serve. In a new afterword, Moskos describes the many benefits of foot patrol--or, as he calls it, "policing green."

Get to the Top John Wiley & Sons

Air pollution poses a serious threat to human health and the environment worldwide. It contributes significantly to regional and global atmospheric issues such as global warming, acidification and depletion of the ozone layer. It affects every living thing, including all kinds of vegetation on which we depend for our survival. Although several works have appeared on air pollution, few are able to provide the broad background that encompasses the whole gamut of plant responses to atmospheric insult. This multi-authored work integrates the varied plant growth responses to the pollution stress; the focus of the attention is plant rather than pollutant. This portrays a clearer picture of plant performance versus air pollution, and helps develop a better insight of the pollution-based disturbances at the different levels of plant life. The book shall interest both students and researchers of environmental botany and forestry as well as all those who love plants and have any interest towards global vegetation and environmental health.

[Global Indian Diasporas](#) Ramesh Publishing House

Global Indian Diasporas discusses the relationship between South Asian emigrants and their homeland, the reproduction of Indian culture abroad, and the role of the Indian state in reconnecting emigrants to India. Focusing on the limits of the diaspora concept, rather than its possibilities, this volume presents new historical and anthropological research on South Asian emigrants worldwide. From a comparative perspective, examples of South Asian emigrants in Suriname, Mauritius, East Africa, Canada, and the United Kingdom are deployed in order to show that in each of these regions there are South Asian emigrants who do not fit into the Indian diaspora concept—raising questions about the effectiveness of the diaspora as an academic and sociological index, and presenting new and controversial insights in diaspora issues.

Water Resource Management in South Asia Elsevier Health Sciences

This cluster of books presents innovative and nuanced knowledge on water resources, based on detailed case studies from South Asia—India, Bangladesh, Bhutan, Nepal, Pakistan, and Sri Lanka. In providing comprehensive analyses of the existing economic, demographic and ideological contexts in which water policies are framed and implemented, the volumes argue for alternative, informed and integrated approaches towards efficient management and equitable distribution of water. These also explore the globalization of water governance in the region, particularly in relation to new paradigms of neoliberalism, civil society participation, integrated water resource management (IWRM), public–private partnerships, privatization, and gender mainstreaming. These volumes will be indispensable for scholars and students of development studies, environmental studies, natural resource management, governance and public administration, particularly those working on water resources in South Asia. They will also be useful for policymakers and governmental and non-governmental organizations.

A Manual of Rice Seed Health Testing Int. Rice Res. Inst.

As plant physiology increased steadily in the latter half of the 19th century, problems of absorption and transport of water and of mineral nutrients and problems of the passage of metabolites from one cell to another were investigated, especially in Germany. JUSTUS VON LIEBIG, who was born in Darmstadt in 1803, founded agricultural chemistry and developed the techniques of mineral nutrition in agriculture during the 70 years of his life. The discovery of plasmolysis by NAGEL! (1851), the investigation of permeability problems of artificial membranes by TRAUBE (1867) and the classical work on osmosis by PFEFFER (1877) laid the foundations for our understanding of soluble substances and osmosis in cell growth and cell mechanisms. Since living membranes were responsible for controlling both water movement and the substances in solution, "permeability" became a major topic for investigation and speculation. The problems then discussed under that heading included passive permeation by diffusion, Donnan equilibrium adjustments, active transport processes and antagonism between ions. In that era, when organelle isolation by differential centrifugation was unknown and the electron microscope had not been invented, the number of cell membranes, their thickness and their composition, were matters for conjecture. The nature of cell surface membranes was deduced with remarkable accuracy from the reactions of cells to substances in solution. In 1895, OVERTON, in U. S. A. , published the hypothesis that membranes were probably lipid in nature because of the greater penetration by substances with higher fat solubility.
