Katz And Lee Natural Gas

Natural petroleum gases contain varying amounts of different (primarily alkane) hydrocarbon

compounds and one or more inorganic compounds, such as hydrogen sulfide, carbon dioxide, nitrogen (N₂), and water. Characterizing, measuring, and correlating the physical properties of natural gases must take into account this variety of constituents.

New correlations to predict natural gas viscosity and ...

The rate of groundwater contamination due to natural gas leakage from oil and gas wells has remained largely unchanged in northeastern Colorado ' s Denver-Julesburg Basin since 2001, according to a new University of Colorado Boulder study based on public records and historical data.

The authors would also like to acknowledge the numerous and substantial contributions made by participants of the Synergies of Natural Gas and Renewable Energy: 360 Degrees of Opportunity workshop series convened by the Joint Institute for Strategic Energy Analysis (JISEA) in collaboration with the Center for the New Energy Economy

PNGE 471 Natural Gas Production and Storage Engineering

Katz and Lee provide a summary of residual gas saturations in a graphical form that is useful for estimates.

According to the model presented by Naar and Henderson [19] for multiphase flow through rock, the trapped or residual gas saturation is one-half of its initial saturation; this Naar-Henderson rule is the simplest correlation for residual gas.
