Katz and Lee provide a summary of residual gas saturations in a graphical form that is useful for estimates. According to the model presented by Naar and Henderson [19] for multiphase flow through rock, the trapped or residual gas saturation is one-half of its initial saturation; this Naar-Henderson rule is the simplest correlation for residual gas.

Natural petroleum gases contain varying amounts of different (primarily alkane) hydrocarbon compounds and one or more inorganic compounds, such as hydrogen sulfide, carbon dioxide, nitrogen (N_2), and water. Characterizing, measuring, and correlating the physical properties of natural gases must take into account this variety of constituents.
