This should be the last course a student takes before high school biology. Typically, we recommend that the student take this course during the same year that he or she is taking prealgebra. Exploring Creation With Physical Science provides a detailed introduction to the physical environment and some of the basic laws that make it work. The fairly broad scope of the book provides the student with a good understanding of the earth's atmosphere, hydrosphere, and lithosphere. It also covers details on weather, motion, Newton's Laws, gravity, the solar system, atomic structure, radiation, nuclear reactions, stars, and galaxies. The second edition of our physical science course has several features that enhance the value of the course: * There is more color in this edition as compared to the previous edition, and many of the drawings that are in the first edition have been replaced by higher-quality drawings. * There are more experiments in this edition than there were in the previous one. In addition, some of the experiments that were in the previous edition have been changed to make them even more interesting and easy to perform. * Advanced students who have the time and the ability for additional learning are directed to online resources that give them access to advanced subject matter. * To aid the student in reviewing the course as a whole, there is an appendix that contains questions which cover the entire course. The solutions and tests manual has the answers to those questions. Because of the differences between the first and second editions, students in a group setting cannot use both. They must all have the same edition. A further description of the changes made to our second edition courses can be found in the sidebar on page 32.

"A sober witness to Detroit's greatness and its status as forgotten city." --Laura Berman, The Detroit News Please note: The spine of this volume is specially treated with black ink to evoke the industrial character of its subject. Over the past six years, documentary photographer and architectural historian Julia Reyes Taubman has taken more than 30,000 photographs across the sprawled terrain of Detroit, ambitiously mapping out a comprehensive survey of a major American city. Photographing on the ground, in the buildings and by air and water, Reyes Taubman believes that when buildings and landscape are manipulated by nature and time they become

more visually compelling than almost any architectural intervention. Reyes Taubman is not pessimistic, however: "It is not a disgrace but a privilege and an obligation to listen to the stories only ruins can tell," she writes in regard to this project. "They tell us a lot about who we were, what we once valued most, and perhaps where we may be going." As Reyes Taubman scrutinizes this 138-square-mile metropolis in transition, she pays particular attention to the scale and the solidity of the buildings that characterized the former "Motor City" at the height of its industrial wealth and power. More than a photographic saturation job of a single city, Detroit: 138 Square Miles provides contextual perspective in an extended caption section in which Reyes Taubman collaborated with University of Michigan professors Robert Fishman and Michael McCulloch to emphasize the social imperatives driving her documentation. An essay by native Detroitier and bestselling author Elmore Leonard addresses the social and cultural significance of the post-industrial condition of this metropolis.
