What is public interest law?
How effective is it? What are

the limits to litigation as a
mechanism for conflict
resolution? In this study,
economists, lawyers, and
sociologists evaluate an
institutional form that is
new to American society and,
indeed, to the world--the
public interest law (PIL)
organization. The book
introduces the reader to the
structure, resources, and
activities of this "nonprofit
industry," and also to the
factors that affect PIL firms
in their choices of cases and
methods of handling them. The

authors examine PIL's vast range of contemporary public policy concerns. These include such general topics as the environment, consumerism, housing, employment discrimination, medical care, occupational health and safety, education finance, and taxation. A number of base studies are presented, and a method for economic analysis and evaluation is introduced and applied. The study points to PIL's success in advocating under-represented interests, in winning courtroom decisions, and in translating legal victories into reallocations of resources. At the same time, it notes the bias of PIL towards test-case litigation, a propensity to focus on judicial victories rather than on real social change, and a tendency to use lawyers even when other types

of professionals might be more effective. Many of these problems stem from uncertainty of funding and legal restrictions on "nonprofit" organizations. The result is a set of hurdles that distracts PIL firms from their principal goals. The authors do not limit themselves to PIL, but comment on the effectiveness of legal instruments as devices for social change, and on the behavior of the voluntary nonprofit sector, a little-studied portion of the economy. The book presents a fresh approach to the study of both collective-type economic problems and institutional setting in which public interest law works.
