*Two-Stroke Performance Tuning* McGraw Hill Professional

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. *Riding in the Zone* helps riders find that state of being. It's the

---

experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

Building on the successful first and second volumes, this book is the

third volume of the Springer book on the Robot Operating System

(ROS): The Complete Reference. The Robot Operating System is

evolving from year to year with a wealth of new contributed packages

and enhanced capabilities. Further, the ROS is being integrated into

various robots and systems and is becoming an embedded technology

in emerging robotics platforms. The objective of this third volume is to

provide readers with additional and comprehensive coverage of the

ROS and an overview of the latest achievements, trends and packages

developed with and for it. Combining tutorials, case studies, and

research papers, the book consists of sixteen chapters and is divided

into five parts. Part 1 presents multi-robot systems with the ROS. In

Part 2, four chapters deal with the development of unmanned aerial

systems and their applications. In turn, Part 3 highlights recent work

related to navigation, motion planning and control. Part 4 discusses

recently contributed ROS packages for security, ROS2, GPU usage,

and real-time processing. Lastly, Part 5 deals with new interfaces

allowing users to interact with robots. Taken together, the three

volumes of this book offer a valuable reference guide for ROS users,

researchers, learners and developers alike. Its breadth of coverage

makes it a unique resource.
