The trading, selling, and buying of personal transport has changed little over the past one hundred years. Whether horse trading in the early twentieth century or car buying today, haggling over prices has been the common practice of buyers and sellers alike. *Horse Trading in the Age of Cars* offers a fascinating study of the process of buying an automobile in a historical and gendered context. Steven M. Gelber convincingly demonstrates that the combative and frequently dishonest culture of the showroom floor is a historical artifact whose origins lie in the history of horse trading. Bartering and bargaining were the norm in this predominantly male transaction, with both buyers and sellers staking their reputations and pride on their ability to negotiate the better deal. Gelber comments on this point-of-sale behavior and what it reveals about American men. Gelber's highly readable and lively prose makes clear how this unique economic ritual survived into the industrial twentieth century, in the process adding a colorful and interesting chapter to the history of the automobile.

In a breakthrough *Organization Man* for the twenty-first century, bestselling author Art Kleiner reveals that every organization is driven by a desire to satisfy a Core Group of influential individuals and explains why understanding this group's expectations is the key to success. When corporate leaders announce, with seeming sincerity, "We make our decisions on behalf of our shareholders," their words are taken at face value. But as recent news stories prove, this imperative is routinely violated. In *Who Really Matters*, Art Kleiner argues that the dissonance between a declared mission and actual operation can be seen at organizations large and small. All organizations have one motive in common. Every decision—which projects to back, who to promote, or how to spend

money—is affected by the perceived wants and needs of a core group of people "who really matter." The composition of the group can differ from organization to organization. Often, the most senior people in the hierarchy are members—but not always. Sometimes, the people who "matter" can extend far down the corporate ladder, or even reach outside the company to include key customers, labor union leaders, and stockholders. Kleiner gives readers clues about how to identify a core group's real mission by observing its day-to-day actions, listening to the fundamental message it sends employees, examining its management of new members; understanding the ideas that shape its policies about management, money, and the way the world works; and avoiding the taboos governing the way it operates. Whether you're a member of the Core Group—or want to be—this deft, engaging blend of argument and observation, anecdotes and advice, is the one guide you'll need to achieve your career goals and aspirations by navigating the hidden pathways in any organization, large or small.

The SR-71 represents the very pinnacle of Cold War aircraft design and it has become an aviation icon. Together with its predecessor, the A-12, the Blackbird was a giant leap into the technical unknown and the design employed many forms of new technology made necessary by the excesses of speed, altitude and temperature to which the aircraft was subjected.

Throughout its 34-year Air Force career, the SR-71 proved itself to be the world's fastest and highest flying operational manned aircraft. It set a number of world records for altitude and speed, including an absolute altitude record of 85,069ft on 28 July 1974, and an absolute speed record of 2,193.2mph the same day. This truly was a unique and ground-breaking aircraft, whose fascinating design history is explored here in full and illuminated with photographs and detailed technical illustrations.
