This guide was developed to help administrators develop transnational distance education programs. It is organized in the order in which a cooperative project develops, using a question-and-answer format. The first seven chapters of the guide are structured to reflect the successive phases of a project: (1) Why should transnational cooperation be set up? (2) how to find the right partners; (3) how to define and agree on a working program; (4) how to define and agree on a financial plan; (5) how to obtain support

for a project; (6) how to administer a cooperation project; and (7) how to use the results of cooperation. The eighth chapter contains a brief description of a few typical cases of transnational cooperation; for its examples, it refers to and quotes from the first seven chapters. The ninth chapter is a summary of some of the programs being promoted by the Commission of the European Communities, and the 10th chapter contains useful background on information sources. (KC)

The image on the front cover depicts a carbon nanotube emerging from a glowing plasma of hydrogen and carbon, as it forms around particles of a metal catalyst. Carbon nanotubes are a recently discovered allotrope of carbon. Three other allotropes of carbon-buckyballs, graphite,

and diamond-are illustrated at the left, as is the molecule methane, CH₄, from which nanotubes and buckyballs can be made. The element carbon forms an amazing number of compounds with structures that follow from simple methane, found in natural gas, to the complex macromolecules that serve as the basis of life on our planet. The study of chemistry also follows from the simple to the more complex, and the strength of this text is that it enables students with varied backgrounds to proceed together to significant levels of achievement.
