This practical coursebook introduces all the basics of semantics in a simple, step-by-step fashion. Each unit includes short sections of explanation with examples, followed by stimulating practice exercises to complete in the book. Feedback and comment sections follow each exercise to enable students to monitor their progress. No previous background in semantics is assumed, as students begin by discovering the value and fascination of the subject and then move through all key topics in the field, including sense and reference, simple logic, word meaning and interpersonal meaning. New study guides and exercises have been added to the end of each unit to help reinforce and test learning. A completely new unit on non-literal language and metaphor, plus updates throughout the text significantly expand the scope of the original edition to bring it up-to-date with modern teaching of semantics for introductory courses in linguistics as well as intermediate students.

Catalyst will transform your approach to networking, making it fun and infinitely more effective. A good business developer, prospector and networker knows how to create a positive connection with the people they meet. They are the catalyst that creates a chemical reaction between strangers, and they know how to convert these opportunities into new business. Louisa Clarke and David Kean have spent their careers catalysing strangers into contacts and converting contacts into clients - and even into friends. They have built successful businesses together using the proven techniques in this book, and they have helped hundreds of companies around the world win billions in new business by applying the same methods. Catalyst is full of illustrative anecdotes, hard-won wisdom and a step-by-step methodology. Whatever industry you work in, if you need more clients to buy your services and you're not sure how to find them, convince them or win them, this is the book for you. Follow this approach and new business will come. You might even make some friends along the way. For many people, networking, prospecting and selling are scary. If the word 'networking' makes you recoil, if the word 'prospecting' conjures up terrifying spectres of endless cold calls, and if you run for the hills at the mention of 'sales', this book will be balm for you. Because, whilst it doesn't make it effortless, it does make it easy. 'Catalyst is a manual for winning business in today's economy, recommended to anyone who wants to grow their client base. Catalyst is brimming with great advice and inspiration' - Annette King, CEO Publicis Groupe UK

A different kind of book about chemistry which teaches readers the process of learning chemistry, not the topic itself. Proving a valuable supplement to any introductory text, this guide offers inside information to help make chemistry less stressful--even enjoyable. Includes exercises and sections for self-assessment.

**The Athenaeum** Prentice Hall

Winner of the Virginia and Warren Stone Prize awarded annually by Harvard University Press for an outstanding book on education and society What makes a great teacher great? Who are the professors students remember long after graduation? This book, the conclusion of a fifteen-year study of nearly one hundred college teachers in a wide variety of fields and universities, offers valuable answers for all educators. The short answer is—it's not what teachers do, it's what they understand. Lesson plans and lecture notes matter less than the special way teachers comprehend the subject and value human learning. Whether historians or physicists, in El Paso or St. Paul, the best teachers know their subjects inside and out—but they also know how to engage and challenge students and to provoke impassioned responses. Most of all, they believe two things fervently: that teaching matters and that students can learn.

From New York Times bestselling author Sam Kean

comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. **THE DISAPPEARING SPOON** masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. \*Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.
