During the past ten years numerous new findings have been documented in the field of gynecological pathology, especially in respect of neoplasms. These findings have been generated by the application of recently developed techniques of immunology and molecular biology. However, clinicopathologic examinations are still an absolute requirement for the morphologic evaluation of neoplasms, including gynecological tumors. The International Society of Gynecological Pathologists (ISGYP) has contributed greatly to the progress within gynecological pathology. The ISGYP Nomenclature Committee has promoted the International Histological Classification of Gynecological Tumors under the auspices of the World Health Organization. A new edition of the classification of tumors and tumor-like conditions of trophoblastic disease, uterine corpus, cervix, vagina, and vulva is currently in press. A second volume covering the ovaries, fallopian tubes, broad ligament, and female peritoneum will be published later. Organization of scientific symposia and seminars has also been an important activity of the ISGYP. The present editor organized and chaired a symposium entitled "Recent Progress in Diagnostic Pathology of Gynecological Tumors" held in Sendai, Japan on 11 April 1986 in close cooperation with Prof. T. Okagaki, University of Minnesota Medical School, and under the joint auspices of the ISGYP and the Japanese Society of Pathology. The following topics were discussed at this symposium: - Immunocytochemistry of gestational trophoblastic disease (Dr. R.J.

Biopsy Pathology of the Bronchi is intended to provide the practicing pathologist with a convenient source of diagnostic information, combined with pertinent clinical patterns and a background of histogenesis. It is hoped that the book will facilitate the accuracy of diagnosis, minimize pitfalls of interpretation and assist in the rapid evaluation of acute and chronic bronchial lesions, including neoplasms. Biopsy is taken in the widest sense and the book includes discussions on cytology, microbiopsies (fine needle aspiration biopsies, curette samples, and biopsies obtained by microforceps) and macrobiopsies, obtained at the time of surgery. Part I of the book deals with the procurement and preparation of bronchial specimens and includes a chapter on fetal development and structure of the normal adult epithelium. In Part II, the histopathology of numerous bronchial diseases are described in detail. Emphasis is placed on the diagnostic features of human lesions which are illustrated by numerous high quality light and electron micrographs. Understanding normal bronchial structure, cell kinetics, and modulations of phenotypic expression provide insight into many pathological processes. Therefore, although emphasis is placed on the diagnostic features of human disease, the histopathology of corresponding lesions in experimental animals is discussed where this provides information helpful in the interpretation of the human lesions. The text of this second edition has been completely revised, planned and written with two goals in mind: to help those learning cytopathology for the first time, including pathology residents, fellows, and cytotechnology students, and to provide a resource for those who have experience in cytopathology but are faced with a difficult diagnostic dilemma. It reflects the fact that diagnostic criteria have become more refined, some types of aspiration are now more common, and terminology has changed.
