IDENTIFICATION AND INTERPRETATION OF JOINT DISEASE IN PALEOPATHOLOGY AND FORENSIC ANTHROPOLOGY

Demos Medical Publishing
Systemic lupus erythematosus (SLE) is an autoimmune disease. SLE affects many parts of the body, with joint pain in the knees and hands being commonly reported symptoms. Arthritis is, therefore, one of the most common symptoms of the disease. This book comprehensively summarizes information about SLE for medical professionals and students. The volume illustrates the process of making accurate diagnoses through systematic interpretation of ABCDEGFI parameters: A (Alignment): malalignment and deformation; B (Bone): bone changes; C (Capsular lesions): cartilage and intra-articular lesions; D (Distribution): four dimensional distributions; E (Extra-bone): extra-articular soft tissue; F (Further information): further additional medical information; G

(Goal): general analysis and integrated comprehensive diagnosis; H (Heal and Heath): treatment and prognosis; and I (Immunological analysis): immunological interpretations. Key Features: - Presents information about the clinical features of SLE and differential diagnosis through 11 chapters - Covers both rheumatic symptoms and systemic symptoms - Provides a comprehensive approach to SLE diagnosis and management which blends both rheumatology and radiology - Explains the ABCDEFGI system for diagnosing and treating SLE patients - Includes more than 750 detailed figures illustrating important information - Includes references for further reading The book is an informative resource for a wide range of scholarly and professional readers who may encounter SLE patients in clinical settings: rheumatologists, orthopedists, radiologists, physiatrists, immunologists, pediatricians, general physicians, medical technicians, caregivers and specialists in internal medicine.

DeLisa's Physical Medicine and Rehabilitation: Principles and Practice Springer Nature

The goals of this guide to the identification and interpretation of joint disease are: (1) to identify the diagnostic criteria that are relevant to investigations of joint disease in dry and macerated bone specimens; (2) to differentiate between various disease forms; and (3) to highlight contentious issues, such as the antiquity of rheumatoid arthritis and the implications of the prevalence and severity of

joint disease for reconstructing the behaviors of past peoples. The text advocates the use of unambiguous terminology and hence discusses descriptive terms and illustrates how the use of colloquial or otherwise inappropriate terms can lead to errors of interpretation. Joint disease causes proliferative and/or erosive bony lesions that preferentially, but not exclusively, affect the synovial joints of the body and this manual emphasizes those diseases. The major sections of the book review the pathogenesis, disease process, anatomical distribution, and diagnosis of osteoarthritis; multifocal erosive arthropathies (i.e., rheumatoid arthritis and the seronegative arthropathies); the less common diseases of synovial joints, including gout, juvenile idiopathic arthritis, and septic arthritis; and conditions affecting the non-synovial joints of the spine such as spinal osteophytosis, degenerative disc disease, Schmorl's nodes, and the seronegative spondyloarthropathies. The text is greatly enhanced by exceptional illustrations and a glossary of terms completes the book.

the rapid progress in ophthalmology, as the use of new medicine and delicate surgical therapy has ensured them the chance to restore their sight. However, some problems have come up during its development, of which the most serious one is the limitation of the ophthalmology. Eyes are not isolated organs, they are connected to our body, and thus, the general status of our body will affect the eyes' function. Therefore, it is of great importance that the ophthalmologists see the big picture while dealing with the clinical problems. Based on the above observations, we put forward the concept of Integrative Ophthalmology, and describe the ophthalmology related medical situations that are prone to be neglected in clinical practice in a bid to increase the awareness of doctors from all fields that a holistic view should be adopted in clinical practice, and it is the patients that we are treating rather than the disease. There are 9 parts in the book, containing the concept of integrative ophthalmology, intraocular and intracranial pressure gradient related diseases, and the relationship between the different general status and eye disorders. We do believe that the integrative ophthalmology is the key to the development of ophthalmology and hope readers can benefit from this book.
