The charming real-life fairy tale of an American secretary who discovers she has been chosen king of an impoverished fishing village on the west coast of Africa. King Peggy chronicles the astonishing journey of American secretary, Peggelene Bartels, who suddenly finds herself king to a town of 7,000 people on Ghana's central coast, half a world away. Upon arriving for her crowning ceremony in beautiful Otum, she discovers the dire reality: there's no running water, no doctor, no high school, and many of the village elders are stealing the town's funds. To make matters worse, her uncle (the late king) sits in a

morgue awaiting a proper funeral in the royal palace, which is in ruins. Peggy's first two years as king of Otum unfold in a way that is stranger than fiction. In the end, a deeply traditional African town is uplifted by the ambitions of its decidedly modern female king, and Peggy is herself transformed, from an ordinary secretary to the heart and hope of her community.

As frustration mounts in some quarters at the perceived inadequacy or speed of international action on climate change, and as the likelihood of significant impacts grows, the focus is increasingly turning to liability for climate change damage. Actual or potential climate change liability implicates a growing range of actors, including governments, industry, businesses, non-governmental organisations, individuals and legal practitioners. Climate Change Liability provides an objective, rigorous and accessible overview of the existing law and the direction it might take in seventeen developed and developing

---

countries and the European Union. In some jurisdictions, the applicable law is less developed and less the subject of current debate. In others, actions for various kinds of climate change liability have already been brought, including high profile cases such as Massachusetts v. EPA in the United States. Each chapter explores the potential for and barriers to climate change liability in private and public law.

An alien intelligence initiates first contact with the Earth, but it may be the last thing we ever hear. As Cal-Tech astrophysicist Allan Sands prepares to spend another perfect Pasadena Christmas with his wife and children, he realizes something isn't right. The television doesn't work, mobile networks are down, and the internet slows to a halt. When Allan notices celestial objects are absent from the early-morning sky he knows this is no power outage or terrorist attack. He heads to nearby Mt. Wilson Observatory, where he discovers the

cause of the strange Event is worse than he could have imagined. From his perch above Los Angeles Allan can see the oncoming tsunami that will devastate the coastline and kill millions, foreshadowing disasters soon to befall the entire planet. And he may be the only person who knows why. 2,500 miles away at Hickam Air Force Base in Honolulu Lieutenant Lee Green and her raptor squad are the only pilots left to escort the president to safety as the world scrambles to save lives and comprehend what is happening. Their next mission: Find Allan Sands and the other scientists on the president's secret First Contact list. Will the world be ready to hear what the scientists conclude about the mysterious so-called Event that turned day to night? When a strange object is spotted heading for the Earth the world wonders if the aliens are coming in peace to help us survive or to finish what they started. Equal parts high concept and high action, the Filter Trap explains Fermi's Paradox in a way that contrasts the hidden terrors of the universe with the ever-present hope in the human heart.

Practice Problems for the Civil Engineering PE Exam contains over 915 problems designed to reinforce your knowledge of the topics presented in the Civil Engineering Reference Manual. Short, six-minute, multiple-choice problems follow the format of the NCEES Civil

PE exam and focus on individual engineering concepts. Longer, more complex problems challenge your skills in identifying and applying related engineering concepts. Problems will also familiarize you with the codes and standards you'll use on the exam. Solutions are clearly written, complete, and easy to follow. U.S. customary and SI units are equally supported, and units are meticulously identified and carried through in all calculations. All solution methodologies permitted by the NCEES Civil PE exam (e.g., ASD and LRFD) are presented. Frequent references to figures, tables, equations, and appendices in the Civil Engineering Reference Manual and the exam-adopted codes and standards will direct you to relevant support material.

Drug War Capitalism McGraw-Hill/Irwin

Morality is one of the fundamental structures of any society, enabling complex groups to form, negotiate their internal differences and persist through time. In the first book-length study of Roman popular morality, Dr Morgan argues that we can recover much of the moral thinking of people across the Empire. Her study draws on proverbs, fables, exemplary stories and gnomic quotations, to explore how morality worked as a system for Roman society as a whole and in individual lives. She examines the range of ideas and practices and their relative importance, as well as questions of authority and the relationship with high philosophy and the ethical vocabulary of documents and inscriptions. The Roman Empire incorporated numerous overlapping groups, whose ideas varied according to social status, geography, gender and many other factors. Nevertheless it could and did hold together as an ethical community, which was a significant factor in its socio-political success.

Theoretical Mechanics of Particles and Continua Saint Martin's Griffin

'Janey is like a whirlwind of selflessness. A beautiful spirit in a beautiful country doing a beautiful thing. I encourage my children to be more 'Janey'. With more positive spirits like Janey, the

world would be a better place.' - Ben Fogle In 2014 and in her mid-twenties, Janey Lowes had been a vet for just two years when she left her home in County Durham and went travelling. Visiting Sri Lanka, she was horrified to see the state of so many of the island's dogs, in particular the three million strays. Over 5,000 miles from home, Janey decided there and then that she was going to move to the island indefinitely and do everything within her power to help them. She raised £10,000 to get started, setting up a charity called WECare Worldwide, and began work. Frightened, determined and excited all at the same time, she found a local who was willing to work with her and began scouring the streets for dogs in need. Some she patched up as best she could at the roadside, others she brought back and treated in a make-shift surgery she had cobbled together in her new home. With very little equipment, she and her small team came up with new and ingenious ways to treat the animals. In this highly inspiring and heartfelt book full of challenges and adventure, Janey introduces us to her world and the tireless work she carries out. As she says, 'I feel as though all these dogs are my dogs and I have a responsibility to them.' In it, we meet many of the colourful characters who have come to offer help, along with innumerable street dogs who have suffered all sorts of trauma and injury, only to be scooped up by Janey and her team and saved.

Though pillage, profit, and plunder have been a mainstay of war since pre-colonial times, there is little contemporary focus on the role of finance and economics in today's "Drug Wars"—despite the fact that they boost US banks and fill our prisons with poor people. They feed political campaigns, increase the arms trade,

---

and function as long-term fixes to capitalism's woes, cracking open new territories to privatization and foreign direct investment. Combining on-the-ground reporting with extensive research, Dawn Paley moves beyond the usual horror stories, beyond journalistic rubbernecking and hand-wringing, to follow the thread of the Drug War story throughout the entire region of Latin America and all the way back to US boardrooms and political offices. This unprecedented book chronicles how terror is used against the population at large in cities and rural areas, generating panic and facilitating policy changes that benefit the international private sector, particularly extractive industries like petroleum and mining. This is what is really going on. This is drug war capitalism. Dawn Paley is a freelance journalist who has been reporting from South America, Central America, and Mexico for over ten years. Her writing has been published in the Nation, the Guardian, Vancouver Sun, Globe and Mail, Ms. magazine, the Tyee, Georgia Straight, and NACLA, among others.

This two-part text fills what has often been a void in the first-year graduate physics curriculum. Through its examination of particles and continua, it supplies a lucid and self-contained account of classical mechanics — which in turn provides a natural framework for introducing many of the advanced mathematical concepts in physics. The text opens with Newton's laws of motion and systematically

develops the dynamics of classical particles, with chapters on basic principles, rotating coordinate systems, lagrangian formalism, small oscillations, dynamics of rigid bodies, and hamiltonian formalism, including a brief discussion of the transition to quantum mechanics. This part of the book also considers examples of the limiting behavior of many particles, facilitating the eventual transition to a continuous medium. The second part deals with classical continua, including chapters on string membranes, sound waves, surface waves on nonviscous fluids, heat conduction, viscous fluids, and elastic media. Each of these self-contained chapters provides the relevant physical background and develops the appropriate mathematical techniques, and problems of varying difficulty appear throughout the text.

It is the wet season in the Australian outback. Drunk and delirious, an old ex-pilot known as “Pisspot Stevie” lies dying in a remote cabin in the Queensland bush. When a priest named Roger Hargreaves comes upon him, Stevie is smoking opium to relieve the pain of his last moments. The priest listens as Stevie, in an opium-fueled haze, begins to describe a very different life he once lived—not in the past, but decades in the future, as a mixed-race aviator who finds love and glory in service to the Queen. After Stevie's death, as Hargreaves tries to sort dream from reality, he makes discoveries that cause him to wonder if he has been granted a glimpse beyond the veil.
