Plotinus on the Soul Cambridge University Press

This account of totally positive matrices treats their central properties with full proofs and a complete bibliography.

Continuum Mechanics in the Earth Sciences Cambridge University Press

No scientific theory has caused more puzzlement and confusion than quantum theory. Physics is supposed to help us to understand the world, but quantum theory makes it seem a very strange place. This book is about how mathematical innovation can help us gain deeper

insight into the structure of the physical world. Chapters by top researchers in the mathematical foundations of physics explore new ideas, especially novel mathematical concepts at the cutting edge of future physics. These creative developments in mathematics may catalyze the advances that enable us to understand our current physical theories, especially quantum theory. The authors bring diverse perspectives, unified only by the attempt to introduce fresh concepts that will open up new vistas in our understanding of future physics.

The experimental approach in economics is a driving force behind some of the most exciting developments in the field. The 'experimental revolution' was based on a series of bold philosophical premises which have remained until now mostly unexplored. This book provides the first comprehensive analysis and critical discussion of the methodology of experimental economics, written by a philosopher of science with expertise in the field. It outlines the fundamental principles of experimental inference in order to investigate their power, scope and limitations. The author demonstrates that experimental economists have a lot to gain by discussing openly the

philosophical principles that guide their work, and that philosophers of science have a lot to learn from their ingenious techniques devised by experimenters in order to tackle difficult scientific problems.

Pedagogy in Higher Education Cambridge University Press

At Dwell, we're staging a minor revolution. We think that it's possible to live in a house or apartment by a bold modern architect, to own furniture and products that are exceptionally well designed, and still be a regular human being. We think that good design is an integral part of real life. And that real life has been conspicuous by its absence in most design and architecture magazines.

In recent years, the study of formal semantics and formal pragmatics has grown tremendously, showing that core aspects of language meaning can be explained by a few principles.

These principles are grounded in the logic that is behind - and tightly intertwined with - the grammar of human language. In this book, some of the most prominent figures in linguistics, including

Noam Chomsky and Barbara H. Partee, offer new insights into the nature of linguistic meaning and pave the way for the further development of formal semantics and formal pragmatics. Each chapter investigates various dimensions in which the logical nature of human language manifests itself within a language and/or across languages. Phenomena like bare plurals, free choice items, scalar implicatures, intervention effects, and logical operators are investigated in depth and at times cross-linguistically and/or experimentally. This volume will be of interest to scholars working within the fields of semantics, pragmatics, language acquisition and psycholinguistics.

Law against the State Cambridge University Press

This book investigates the founding and building of cities in the ancient Near East. The creation of new cities was imagined as an ideological project or a divine intervention in the political narratives and mythologies of Near Eastern cultures, often masking the complex processes behind the social production of urban space. During the Early Iron Age (c.1200–850 BCE), Assyrian and Syro-Hittite rulers developed a highly performative official discourse that revolved around constructing cities, cultivating landscapes, building watercourses, erecting monuments and initiating public festivals. This volume combs through archaeological, epigraphic, visual, architectural and environmental evidence to tell the story of a region from the perspective of its spatial practices, landscape history and

architectural technologies. It argues that the cultural processes of the making of urban spaces shape collective memory and identity as well as sites of political performance and state spectacle.

This collection of rich, empirically grounded case studies investigates the conditions and consequences of 'juridification' - the use of law by ordinary individuals as a form of protest against 'the state'. Starting from the actual practices of claimants, these case studies address the translation and interpretation of legal norms into local concepts, actions and practices in a way that highlights the social and cultural dynamism and multivocality of communities in their interaction with the law and legal norms. The contributors to this volume challenge the image of homogeneous and primordially norm-bound cultures that has been (unintentionally) perpetuated by some of the more prevalent treatments of law and culture. This volume highlights the heterogeneous geography of law and the ways boundaries between different legal bodies are transcended in struggles for rights. Contributions include case studies from South Africa, Malawi, Sierra Leone, Turkey, India, Papua New

Guinea, Suriname, the Marshall Islands and Russia.

The Balance of Nature and Human Impact

A fun and colorful "Alphabet" book written and illustrated by Anna (age 5) and her sister Abby (age 4). These two sisters embarked on their book making adventure the summer before starting kindergarden and pre-school. Both girls love drawing and reading. Creating this book has been a fun way to apply what they've been learning about letters, writing, and picture making. The ideas, illustrations and text are their own creations and reflect the things, people and even colors they love.
